

International Travel and Migration: January 2015

Embargoed until 10:45am – 26 February 2015

Key facts

In January 2015 compared with January 2014:

- Visitor arrivals (302,400) were up 10,000. The biggest changes were in arrivals from:
 - Australia (up 9,800)
 - Korea (up 2,000)
 - China (down 4,400).
- Overseas trips by New Zealand residents (133,800) were up 5,900. The biggest changes were in departures to:
 - the United States (up 1,700)
 - Fiji (up 1,400)
 - Australia (up 1,300).

In January 2015, seasonally adjusted figures showed a net gain of 5,500 migrants.

Commentary

- Increase in January visitor numbers driven by arrivals from Australia
- Annual visitor numbers up 4 percent
- New Zealand residents travel more to the United States in January
- Annual trips abroad by New Zealand residents up 4 percent
- Net inflow of migrants reaches new peak in January
- India top source of annual net gain in migrants

Increase in January visitor numbers driven by arrivals from Australia

Overseas visitor arrivals to New Zealand numbered 302,400 in January 2015, the highest-ever January total. This was up 3 percent from January 2014 (292,400).

Source: Statistics New Zealand

Visitor arrivals by country of residence

The biggest changes in visitors by country of residence between January 2014 and January 2015 were in arrivals from:

- Australia (up 9,800)
- Korea (up 2,000)
- the United States (up 1,100)
- Hong Kong (down 1,100)
- China (down 4,400).

Arrivals from China numbered 25,700 in January 2015, down 15 percent from January 2014. This was driven by a change in timing of the Chinese New Year, a popular time for travel, from January in 2014 to February in 2015. The fall in arrivals from Hong Kong (down 37 percent to 1,900) can also be attributed to the change in timing of the Chinese New Year. In contrast, arrivals from Taiwan which are usually affected by the Chinese New Year timing, were up 31 percent compared with January 2014, helped by new flights from Taipei to Christchurch via Sydney.

Visitor arrivals by travel purpose

The biggest changes in visitors by travel purpose between January 2014 and January 2015 were in arrivals for:

- holidays (up 5,600)
- visiting friends and relatives (up 1,300)
- business (up 1,200).

Australia contributed the biggest increases in arrivals for holidays (up 5,100), visits to friends and relatives (up 2,300), and business travel (up 1,400). The change in timing of Chinese New Year caused the number of holiday arrivals from China and Hong Kong both to decrease (down 4,400 and 1,000 respectively).

Annual visitor numbers up 4 percent

Visitor arrivals to New Zealand numbered 2.87 million in the January 2015 year, the highest-ever annual total. The latest figure was 4 percent higher than in the January 2014 year (2.75 million).

Similar to the January 2015 month, the biggest annual increase in visitor arrivals, compared with the January 2014 year, was from Australia (up 31,100). The second largest increase was in arrivals from the United States (up 20,900). In spite of the change in timing of Chinese New Year affecting visitor arrivals in January, China still had the third largest increase of annual arrivals (up 20,100).

For more detailed data about visitor arrivals, see the Excel tables in the 'Downloads' box.

New Zealand residents travel more to the United States in January

New Zealand-resident travellers departed on 133,800 overseas trips in January 2015, up 5 percent from January 2014 (127,800).

Source: Statistics New Zealand

Overseas trips by country of main destination

The biggest changes in overseas trips by country of main destination (where the person will spend the most time) between January 2014 and January 2015 were in trips to:

- the United States (up 1,700)
- Fiji (up 1,400)
- Australia (up 1,300)
- China (down 1,100).

The fall in trips by New Zealand residents to China can also be attributed to the change in timing of Chinese New Year, as more people delay travel to China, to coincide with New Year celebrations.

Annual trips abroad by New Zealand residents up 4 percent

Trips by New Zealand residents in the January 2015 year (2.28 million) were up 4 percent from the January 2014 year (2.20 million).

Around half of all trips by New Zealand residents in the January 2015 year were to Australia (1.09 million). The next most-visited destinations were the United States (166,500), Fiji (131,500), the United Kingdom (102,000), the Cook Islands (76,500), and China (75,800).

For more detailed data on overseas trips by New Zealand residents, see the Excel tables in the 'Downloads' box.

Net inflow of migrants reaches new peak in January

Seasonally adjusted permanent and long-term (PLT) migration figures showed a net gain (more arrivals than departures) of 5,500 migrants in January 2015. This followed small decreases in net migration in the previous two months. The latest net gain in migration set a new all-time high that surpassed the October 2014 peak of 5,200. This is the third time in the last six months that the previous record net gain of migrants (4,700 in February 2003) has been surpassed.

The higher figure in January 2015, compared with December 2014, was due to greater arrivals of non-New Zealand citizens.

The seasonally adjusted net loss of 100 migrants to Australia in January 2015 was smaller than the loss of 800 in January 2014. The highest-ever net loss to Australia (4,300) was in February 2001, just before an immigration policy change that restricted access to welfare benefits for New Zealand citizens arriving after that date.

India top source of annual net gain of migrants

Unadjusted figures showed a net gain of 53,800 migrants in the January 2015 year, a significant increase on the net gain of 25,700 in the January 2014 year. This was the sixth month in a row that the annual record for a net gain of migrants has been broken, all surpassing the previous high in the May 2003 year (42,500).

The increased net gain of migrants in the January 2015 year was driven by both more arrivals and fewer departures. Migrant arrivals reached a new high of 111,500, up 17 percent from the January 2014 year (95,200). Migrant departures numbered 57,700, down 17 percent from the January 2014 year (69,500). This is the lowest migrant departures have been since the November 2003 year (56,700).

PLT migration by country of residence

The increase in migrant arrivals between the January 2014 and January 2015 years was led by India (up 5,100), Australia (up 3,500), China (up 1,700), and the Philippines (up 1,300). The increase in arrivals from Australia included 2,600 more New Zealand citizens, and 900 more non-New Zealand citizens.

The fall in migrant departures was primarily due to fewer departures of New Zealand citizens to Australia (down 10,200). Departures of New Zealand citizens to Australia have more than halved in the last two years from 48,300 in the January 2013 year to 23,100 in the January 2015 year.

The net loss of 2,900 people to Australia in the January 2015 year was well down from the net losses of 17,100 in the January 2014 year and 37,900 in the January 2013 year. The latest figure is the smallest net loss to Australia since the June 1992 year (2,800).

New Zealand recorded net gains of migrants from most other countries in the January 2015 year, led by:

- India (10,800)
- China (7,600)
- the United Kingdom (5,100)
- the Philippines (3,800).

PLT migrant arrivals by visa type

The biggest changes in migrant arrivals by visa type between the January 2014 and January 2015 years were:

- student visas (up 8,200)
- work visas (up 3,500)
- New Zealand and Australian citizens (up 2,900).

Most of the increase in migrants arriving on student visas was from India (up 4,800) and China (up 1,100). Migrants arriving from India have been New Zealand's biggest source of PLT arrivals on student visas since the January 2008 year. Before then, China was the biggest source of PLT migrants on student visas.

Increases in work visa arrivals were led by France (up 1,000) and the Philippines (up 600). Arrivals on work visas include working holidaymakers.

PLT migration by New Zealand region

Nearly all regions had a net gain of migrants in the January 2015 year, led by Auckland (24,600), Canterbury (6,200), and Waikato (2,000). The increased net gain of migrants in Auckland and Canterbury was mainly because of more arrivals (up 7,800 and 1,300 respectively). In contrast, the increased net gain in Waikato was driven by fewer departures (down 1,400).

For more detailed data about permanent and long-term migration, see the Excel tables in the 'Downloads' box.

Definitions

About the international travel and migration statistics

International travel and migration statistics count passengers arriving into and departing from New Zealand. Passengers are split into one of three passenger types: overseas visitors, New Zealand-resident travellers, and permanent and long-term migrants.

Arrivals and departures of overseas visitors and New Zealand-resident travellers are key indicators of tourism and travel. Permanent and long-term migration is a component of New Zealand's population change, along with births and deaths. Migration affects the composition of the population as well as population size.

More definitions

Citizenship: determined from the country that issued the passport the person uses when arriving or departing. A person may hold passports from more than one country.

Country of main destination: the country where a New Zealand-resident traveller will spend the most time while overseas. Departure cards do not ask travellers which other countries they intend to visit on the same trip.

Country of residence: this is the country where the person last lived or will next live for 12 months or more.

New Zealand region: the area in New Zealand containing the residential or contact address stated on a passenger's arrival or departure card. Regional council areas are approximated by grouping territorial authority (city and district council) areas. Where a territorial authority area is split across regional council areas, it is fully included in the region that most of its population lives in.

New Zealand-resident travellers: people who live in New Zealand and are travelling overseas for less than 12 months.

Overseas visitors: people who live overseas and are visiting New Zealand for less than 12 months.

Passenger type: each passenger is classed as an overseas visitor, a New Zealand-resident traveller, or a permanent and long-term migrant. Passenger type is not related to legal permanent residence in a country or the visa type a person holds. It is based on the time spent in and out of New Zealand. This is primarily determined from responses on the arrival and departure cards to questions about how long the person is in or away from New Zealand, and where they are living for 12 months or more.

Permanent and long-term arrivals: people from overseas arriving to live in New Zealand for 12 months or more (including permanently), and New Zealanders returning after an absence of 12 months or more overseas.

Permanent and long-term departures: New Zealanders departing for an absence of 12 months or more (including permanently), and people from overseas who are departing after a stay of 12 months or more in New Zealand.

Travel purpose: the main purpose for the visit to New Zealand or trip overseas. Categories are holiday, visiting friends and relatives, business, conferences and conventions, education, and other.

Visa type: the type of immigration visa held or granted on arrival in New Zealand. People may change their visa type later while still in New Zealand.

Data source

International travel and migration statistics are based on electronic arrival and departure records for each international passenger, supplied to Statistics NZ by the New Zealand Customs Service. These electronic records include flight and passport details, such as date of travel, date of birth, sex, and country of citizenship.

The New Zealand Customs Service also supplies Statistics NZ with arrival and departure cards completed by passengers. Additional detail such as country of residence and travel purpose is captured from these cards and added to the information from electronic records.

Immigration New Zealand owns the arrival and departure cards, which are used to administer numerous New Zealand laws in addition to producing statistics. Statistics NZ only captures information from the cards for statistical purposes, and passes the cards to Immigration New Zealand after it has captured the data.

See the [arrival card](#) (PDF, 84kb). See the [departure card](#). These are for reference only.

Accuracy of the data

Data collection

Statistics NZ scans every arrival and departure card, and uses image recognition technology to automatically recognise and code responses. Processing staff then manually capture any required information not captured automatically – as automated software cannot clearly recognise every response.

The imaging system automatically determines all of the information required for around 9 in every 10 cards, meaning about 1 million records are completed manually each year.

Some response fields are required from every card. These include passport number and birth date, which are used to match each card with the corresponding electronic record containing flight and passport details. Some fields are only required for certain passenger types, or for a sample of passengers.

Changes in recorded passenger intentions

Statistics NZ processes all arrivals and departures and allocates them to one of three passenger types: overseas visitors, New Zealand-resident travellers, and permanent and long-term migrants.

A person may change their intentions after their arrival or departure, which may mean the recorded passenger type becomes incorrect. Statistics NZ does not revise published statistics for such changes, but advises that the published figures remain a good indicator of trends in permanent and long-term migration.

The Alternative methods for measuring permanent and long-term migration article has more detail about the effect of intention changes.

Sampling

Some fields are only collected for a sample of passengers. Data from the sample is used to estimate the characteristics of the full population. This still provides a good picture of the characteristics of travellers, while greatly decreasing the time and cost of capturing the data.

All figures for permanent and long-term migrants are actual counts (not derived from a sample). Arrival and departure totals for overseas visitors and New Zealand-resident travellers are also actual counts. More detailed data for overseas visitors and New Zealand-resident travellers, such as figures by country or travel purpose, are derived from a sample.

The sample ratios currently used are:

- Overseas visitor arrivals: 1 in 16
- Overseas visitor departures: 1 in 26
- New Zealand-resident traveller arrivals: 1 in 26
- New Zealand-resident traveller departures: 1 in 20.

Figures derived from a sample may contain sample error (a difference from the actual figure). Small numbers are more likely to contain a large sample error as a percentage of the actual figure, and should be used with caution.

Seasonally adjusted and trend series

The purpose of seasonally adjusting a time series is to measure and remove the varying seasonal components in the series (for example, there are more visitor arrivals during the New Zealand summer, due to the warmer weather and longer daylight hours). This makes the data for adjacent periods more comparable.

The seasonal adjustment process for international travel and migration statistics uses Statistics NZ's standard seasonal adjustment package, X-13ARIMA-SEATS, with enhancements that allow Statistics NZ to specify and adjust additional calendar effects. These include the number and type of trading days in the month (as more people generally arrive and depart on Friday, Saturday, and Sunday), and holiday periods, which have important effects on travel but can occur in different months each year (eg Easter can be in March or April).

Both monthly and quarterly seasonally adjusted series are available. The quarterly series are adjusted independently of the adjustments made to the monthly series. Hence, quarterly figures may not equal the sum of monthly seasonally adjusted figures.

Seasonally adjusted and trend data back to January 1996 is subject to revision each period. The size of these revisions is expected to be minimal, with the largest revisions occurring in the periods immediately before the current month or quarter. Data before January 1996 is not revised. This cut-off is used because of the change to a four-term school year in 1996, which resulted in changes to the seasonal patterns of the New Zealand-resident traveller series.

Interpreting the data

Passenger counts

The statistics in this release relate to the number of passenger movements to and from New Zealand, rather than to the number of people – that is, the multiple movements of individual people during a given reference period are each counted separately. For example, a New Zealand resident making five business trips overseas within a year would be counted as five arrivals and five departures.

Timing of published data

Final international travel and migration statistics: released approximately three weeks after the end of the reference month. This delay is longer for December and January data due to the peak travel period coinciding with the Christmas and New Year holidays.

New Zealand and overseas port data: becomes available two working days after the international travel and migration release.

Provisional international travel statistics: normally released at 2pm every Friday on the [Provisional international travel statistics](#) web page. These show the latest weekly and four-weekly figures for visitor arrivals and New Zealand-resident traveller departures, including figures for 10 major source and destination countries. No further data is available until the monthly release of final statistics.

Confidentiality

Statistics NZ releases statistics derived from arriving and departing passenger records. It does not release the records of individual passengers.

Tables

The following tables are available in Excel format from the 'Downloads' box. If you have problems viewing the files, see [opening files and PDFs](#).

1. International travel and migration, by direction and passenger type, actual counts
2. International travel and migration, by direction and passenger type, seasonally adjusted and trend series
3. Overseas visitor arrivals, by country of last permanent residence
4. Overseas visitor arrivals, by travel purpose and country of last permanent residence
5. New Zealand-resident traveller departures, by country of main destination
6. Permanent and long-term arrivals, by country of last permanent residence
7. Permanent and long-term departures, by country of next permanent residence
8. Net permanent and long-term migration, by country of last/next permanent residence
9. Permanent and long-term migration, by citizenship, actual counts
10. Permanent and long-term migration, by citizenship, seasonally adjusted series
11. Permanent and long-term migration, by New Zealand region
12. Permanent and long-term arrivals, by visa type and country of last permanent residence
