Kevin just asked me to copy you both on this item as well.

I've worked with Mike on these issues before and he will be on message. Patrician knows to facilitate, but if you want me to be more hands on with this because of the sensitivity, I will. Pls let me know.

Pam

If I have missed the loop on someone pls forward and let me know.

Thanks!

Approved

Make no claims as to cause...stay with the research you are doing, of course.

Hi Pam,

I will need to let Stef Nagid know soon if I will be available to participate in this documentary.
Thanks, Mike

Subject: FW: filming for climate change

Hi Pam,

Please see the email below. I have been asked to participate in a National Geographic/Audubon film about sea level rise. My participation will be to discuss the Matanzas Bain Project (<http://planningmatanzas.org/>) and to focus on the efforts underway to measure sea level rise and adapt to it in Northeast Florida (e.g., salt marsh monitoring, living shorelines, the GTM Coastal and Estuarine Land Conservation Program proposal, the recent NOAA funded scientific field station at princess place).

Thanks,
Mike

Hey Mike!

I am working with another Audubon Florida staff on a film about sea level rise and how it will affect saltmarshes in northeast Florida. I was thinking that you would be a great person to get on video discussing the GTMNERR sea level rise planning project and some anticipated affects and future planning y'all are doing ☺. I have a camera that I can use to film you, but we also have a crew from National Geographic coming the first week of May to do some filming as well. Marianne is still working on who/what she wants NG to film, but I wanted to see if you would be willing to be on camera for us. Let me know what you think!

Cheers,
Stef
