I've changed back to carryover for 2008. Keep me in the loop if anything changes. Thanks Steve

Subject: No new Delta/Kappa ign switch for MY 08

I wanted to close the loop on the Electrical SMT's attempt to bring a new ignition switch design to the Delta/Kappa vehicles for MY 08. As the VSE for the Cobalt launch I was very aware of an issue with "inadvertent ignition offs" due to the low mounted ignition switch in the steering column and the low efforts required to rotate the ignition.

A new, more robust, increased effort design is currently being implemented on the GMT191 program for MY 07. My intention was to bring this part number common design to the Delta/Kappa vehicles for MY08. I attended an X Vapir with the Delta team to review the pres/cons of this change. The con of the change is that the piece cost of the ignition switch went up around \$0.90 and would require \$400K in tooling to add the almost 600K in volume.

At the X Vapir my team was challenged to offset the piece cost with warranty savings and/or reduced PC/Inv. I worked through Purchasing with Stoneridge Pollak to gain the reductions. Stoneridge Pollak was unwilling to budge on their PC/Inv. The warranty offset for the new switch is in the \$0,10-0.15 range.

It was felt by the Delta team that the revision of the slot in the igntion key to a hole would significantly reduce the inadvertent offs and make any additional changes unnecessary

Consequently, the ignition switch for the Deltas and Kappas will remain the carryover single detent switch until the piece cost hit can be eliminated or significantly reduced. My plan is to resource this switch design for MY 09 and make it available for the Deltas, Kappas, and 19X families.
