Overview

Introduction

The California Secretary of State's Political Reform Division (PRD) provides paper and electronic filing capability for individuals, firms and businesses involved in campaign financing or lobbying services.

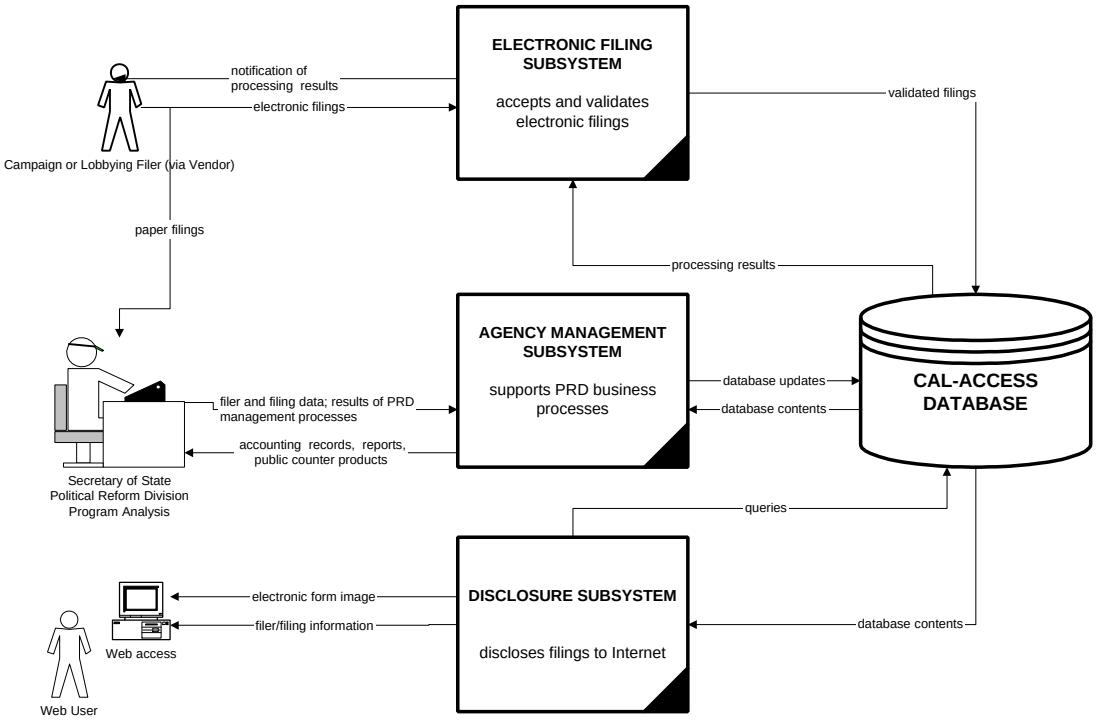
Filers can only submit some forms electronically. Vendors who are certified by PRD provide electronic filing services. PRD provides the filing data through the Secretary of State website. The data is available to the public, filtered only for privacy and legal requirements (e.g., no addresses, no bank account numbers).

In addition to creating a user-friendly website that offers data in several ways, the Secretary of State offers the raw data in ASCII tab-delimited text files that allow experienced users to import into custom databases and analysis tools.

Process

The submittal, management and disclosure of filing data are provided by a PRD system known as Cal-Access. Cal-Access consists of three subsystems illustrated below --- Electronic Filing Subsystem (EFS), Agency Management Subsystem (AMS) and the Disclosure Subsystem. Electronically submitted data is captured electronically intact, as submitted, with no changes made to the submitted filing. Filings submitted on paper are logged but the detail is not entered into the system.

CAL-ACCESS OVERVIEW



Data is validated and entered intact into the system. Where errors and omissions are recognized, a request for correction or additional information is sent to the filer. The filer may then submit an amendment to the original filing. Understanding this basic flow leads to the recognition that the data in the system is not pristine and data may not be available to conduct the requested analysis.

Understanding the Data

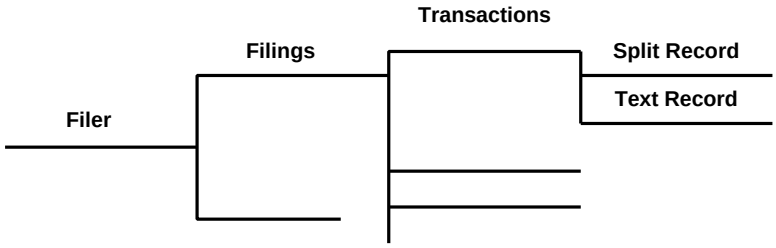
The Fair Political Practices Committee (FPPC) identifies the data and the forms to be provided by the filer to meet the requirements of the Political Reform Act. The FPPC is the enforcement agency. PRD defines and provides the system to collect and report on the data provided. As the requirements change, so does the system.

Data is captured from the vendor/filer through EFS as submitted with no changes. The vehicle to define data requirements between the vendor and PRD is the Cal Format document. It ties the data to the forms and to the database tables used to store the data. The Cal Format provides the data type and content allowed in the database fields.

The Cal-Access system is modified to handle changes in the Cal Format; the Cal Format version number is stored in the database to facilitate processing changes. For historical and analysis purposes, the relationship between the forms, Cal Format version, the table field and content must be taken into account. The AMS and Disclosure Subsystem recognize and implement function based on this relationship.

PRD staff uses the Agency Management Subsystem (AMS) to administer the collection of data to meet requirements and to produce summary reports. AMS uses the submitted data, and couples it with other factors needed by PRD to meet their responsibilities. The Cal Access system includes functions such as, but not limited to, the assignment of **filer id**s, passwords, **filing id**s and **amendment numbers** to tie together a completed filing.

The Cal Format document identifies the forms and schedules that comprise a complete filing. A filing is tied to a filer id. An amendment is tied to a filing id and is a replacement of the original filing. In some cases, a line item field is included in a table. The line item couples the data value with a specific line number on the form. Some forms require additional data for a specific transaction record. These are contained in split and text records. In these cases, the split and text records are children of the transaction record.



What is Provided, Where to Start

Familiarity with the forms and Cal Format is key to understanding the database. For the forms, refer to the FPPC web page www.fppc.ca.gov. The Cal Format documents are provided as part of this distribution. New versions of the Cal Format document may be found on the Secretary of State web site www.sos.ca.gov. The attachment provides a summary of forms and schedules included in a filing.

The data is a direct extract of filer submitted filings by table. The overall view of these tables may be viewed by displaying the ReadmeMap.pdf file. The individual tables and fields may be displayed by viewing CalAccessTablesWeb.pdf. This file shows all tables in Cal-Access.

The data is being provided in a comma-separated text file. The CSV data includes the field information as the first line.

All data is compressed into one zip archive. The grouping of files in the archive is described in the Readme_zip.pdf file. Individual tables may be identified and then downloaded and extracted from the single zip file.

The files listed in the "Common Campaign and Lobbying" section are needed for use with all tables.

Refer to the Frequently Asked Questions before starting. It may save you time. Suggestions are welcome.

Map Cal Format to Database Tables and Fields

This document is divided into two major sections --- Overview and Detail. The Overview section illustrates the filing tables and the corresponding forms that the data is derived from. The Field Detail section lists each table, its fields and a map of the Cal Format field name to the table field name. The field names may not accurately represent the content of the field. It is important to refer to the map to ensure the correct field is specified for data retrieval.

TOP 10 FREQUENTLY ASKED QUESTIONS

1. **What year should be the starting point for analysis?**

   · There is no filing data from electronically filed documents before 01/01/2000. Only name and address fields were taken before 2000 to populate the system.

2. **What Cal Format version should I use?**

   · For HDR table entries for versions other than 2.00 or 2.01 use the 1.05 Cal Format document, otherwise use the 2.01 document. Version 2.00 was the first enforcement of the version identification.

3. **What is the data format for CSV files?**

   · The first row of data contains the field names. The following rows contain data with fields separated by a comma using a double quote as a qualifier (e.g., " field content").

4. **How do you import CSV files into Microsoft Access?**

   · On the import window, check the box that the first row contains field names and the text qualifier is a double quote (").

   · Some of the tables contain fields longer than 255 characters. The field type is defaulted to "Text", change the field type to "Memo" to process the record.

5. **Importing CSV files into Microsoft Excel results in message "*Not all records Processed*".**

   · Microsoft Excel has a limit of 65,000 records. Many of the tables exceed this number, thus not all rows can be read into a Microsoft Excel spreadsheet.

6. **How does the amendment process work?**

   · Amendment number zero (0) represents the original filing. Amendment numbers greater than zero are amendments. To find the most current amendment, find the maximum number for a given filing.

   · Campaign amendments replace the filing. The maximum amendment number represents the current data.

   · Lobbyist registration amendments require Form 605, use the Lobby_Amendment table and supplement the existing data. The data must be used in concert with other lobby table data to obtain the current filing.

   · Amendments to Lobbyist disclosure docs (i.e., 615, 625, 635, 645) are complete replacements like their Campaign counterparts.

7. Wh**y do summary amounts not equal the sum of individual amounts?**

   · Reporting requirements for individual amounts can cause this condition.

TOP 10 FREQUENTLY ASKED QUESTIONS

8. **What is the FilerName table format and purpose?**

· The FilerName table is a combination of Cal-Access tables to provide the analyst with filer information

Field Name	Description
Xref_Filer_Id	The external filer id saved in the forms tables
Filer_Id	The internal filer id saved in Cal-Access
Filer_Type	The type of filer.
Status	Active, Inactive, or Terminated
Effect_Dt	Effective date for status
Naml	Last Name (see note)
Namf	First name
Namt	Title
Nams	Suffix
Adr1	Address 1
Adr2	Address 2
City	City
St	State
Zip4	Zip code
Phon	Telephone number
Fax Fax	Telephone number
Email	E-mail address

Note: *Name last can also be the full name of the filer (for both Campaign and lobbying filing entities). Full name of all pacs, firms, and employers are always in this last name field. Major Donors can be split between first and last name fields, but usually are contained in the last name field only. Individual names of lobbyists, candidates/officeholders,treasurers/responsible officers, and major donors (when they are only an individual's name) use both the first and last name fields in conjunction.*

9. **When do I use the xref_filing_id and when do I use the filing_id?**

· The filing_id occurs in the tables Filer_filings table. To determine the filer name, search the filername table field filer_id.

· To determine the filings a filer has filed, find the filer in the filername table (a filer name may have more then one filer id). Search the filer_filings table using the filer id for associated filing_ids.

· The xref_filing_id is found in the form tables. Using the xref_filing_id, the filer name may be found by searching the filername table.

10. **What are the values for the filing_type field in the Filings?**

Value	Description
22000	Filing Type
22001	Electronic
22002	Key Data Entry
22003	Historical Lobby
22004	Historical Campaign
22005	AMS
