State Superfund Site Classification Notice

The Inactive Hazardous Waste Disposal Site Program (the State Superfund Program) is the State's program for identifying, investigating, and cleaning up sites where the disposal of hazardous waste may present a threat to public health and/or the environment. The New York State Department of Environmental Conservation (DEC) maintains a list of these sites in the Registry of Inactive Hazardous Waste Disposal Sites (Registry). The site identified above, and located on a map on the reverse side of this page, has been added to the Registry as a Class 2 site that presents a significant threat to public health and/or the environment for the following reason(s):

- Per- and polyfluoralkyl substances (PFAS) have been detected at elevated levels in groundwater and surface water at the airport with perfluorooctanoic acid (PFOA) greater than 18,000 parts per trillion (ppt) and perfluorooctane sulfonic acid (PFOS) greater than 950 ppt. Actions are needed to identify the source of this contamination, to define the nature and extent of contamination in groundwater and other environmental media, and to evaluate and address potential exposures.

Next steps will involve conducting a comprehensive remedial investigation to determine the nature and extent of contamination at the site and evaluating cleanup options. DEC will keep you informed throughout the investigation and cleanup of the site.

If you own property adjacent to this site and are renting or leasing your property to someone else, please share this information with them. If you no longer wish to be on the contact list for this site or otherwise need to correct our records, please contact DEC's Project Manager listed below.
