Al:

Looping in my colleague Jeff Bechdel. Jeff works in our strategic communications and interacts directly with press on issues related to energy. He is getting inquiries from friendly press about how this impacts local oil and gas based communities. I know you and the Mayor (as well as CDOD) have been getting calls – but wanted to loop in Jeff. I believe the Washington Examiner is looking to do a story on the negative impacts of these executive orders and I thought it might be a good opportunity to get our story out to a wider audience.

Jeff

Jeff – this news is exceptionally disappointing and the content in the announcement is clearly biased, and not representative of what's actually occurring here in the County. The announcement also appears to be open ended. There was no duration included in the information on the pause.

We've already seen evidence of the impacts the 60 day moratorium on approvals has had. This announcement will certainly exacerbate the issue to where more work, jobs and companies will exit Eddy and Lea County's in favor of pursuing their opportunity across the state line in Texas.

The message couldn't be more clear, southeast New Mexico is not a business friendly for an industry that has sustained the State of New Mexico finances for decades. The claims made in the announcement about jobs being created to

replace those lost would seem pretty hollow considering they won't help the person that's been shut down and put out of work today. Those individuals and families are the first casualties of a misinformed or uninformed group who have never laid eyes on the realities of what it takes to deliver energy for their convenience.

Sad commentary indeed...

Allen Davis

FACT SHEET: President Biden to Take Action to Uphold Commitment to Restore Balance on Public Lands and Waters, Invest in Clean Energy Future

WASHINGTON, D.C. — President Joe Biden will sign an Executive Order today that will help restore balance on public lands and waters, create jobs, and provide a path to align the management of America’s public lands and waters with our nation’s climate, conservation, and clean energy goals.

In implementing the Executive Order, the Department of the Interior will engage diverse stakeholders across the country, as well as conduct formal consultation with Tribes in recognition of the U.S. government’s trust responsibilities.

HITTING PAUSE ON NEW OIL AND GAS LEASING

The Executive Order will direct the Department of the Interior to pause new oil and natural gas leasing on public lands and offshore waters, concurrent with a comprehensive review of the federal oil and gas program. The targeted pause **does not impact** existing operations or permits for valid, existing leases, which are continuing to be reviewed and approved. The order does not restrict energy activities on private or state lands, or lands that the United States holds in trust or restricted status for Tribes or individual Indians.

The President’s action will provide a chance to **review** the federal oil and gas program to ensure that it serves the public interest and to **restore balance** on America’s public lands and waters to benefit current and future generations. Fossil fuel extraction on public lands accounts for nearly a quarter of all U.S. [greenhouse gas emissions](#). Irresponsible leasing of public lands and waters impacts communities’ access to clean air, clean water, and outdoor recreation; carves up important wildlife habitat; and threatens cultural and sacred sites. Multiple bills in Congress have been introduced in recent years to reform the outdated program, including those to better ensure the public is not shut out of land management and leasing decisions; to address the mounting cleanup and remediation costs of orphan wells scattered across the country; and to provide a fair return to taxpayers for the use of their resources.

The oil and gas industry has stockpiled millions of acres of leases on public lands and waters.

- Onshore, of the more than 26 million acres under lease to the oil and gas industry, nearly 13.9 million (or 53%) of those acres are unused and non-producing.
- Offshore, of the more than 12 million acres of public waters under lease, over 9.3 million (or 77%) of those acres are unused and non-producing.
- Onshore and offshore, the oil and gas industry is sitting on approximately 7,700 unused, approved permits to drill.

The Trump administration conducted a fire sale of public lands and waters, offering more than 25 million acres onshore during the past four years, 5.6 million of which were purchased. Offshore, more than 78 million acres were offered for lease to oil, gas, and mineral development offshore, and only 5 million acres were purchased.

CREATING JOBS BY INVESTING IN RENEWABLE ENERGY & RESTORATION

As part of President Biden's efforts to Build Back Better and pursue a clean energy future, the administration has committed to making investments to **create millions of family-supporting and union jobs** in clean energy generation, land restoration, abandoned mine cleanup, plugging of orphan oil and gas wells, energy efficiency, clean transportation, advanced manufacturing, and sustainable agriculture across America. Today's Executive Order will call for the Interior Department to identify steps to accelerate responsible development of renewable energy on public lands and waters, including setting a goal to double renewable energy production from offshore wind by 2030. The Department will immediately begin a review of processes and procedures to date as it re-invests in a rigorous renewable energy program.

It also calls for the establishment of a new Climate Conservation Corps Initiative to put a new generation of Americans to work conserving and restoring public lands and waters, increasing reforestation, increasing carbon sequestration in the agricultural sector, protecting biodiversity, improving access to recreation, and addressing the changing climate.

CONSERVING 30% OF AMERICA'S LANDS AND OCEAN BY 2030

The Executive Action will direct the Interior Department to outline steps to achieve the President's commitment to conserve at least 30% each of our lands and waters by the year 2030, as recommended by scientists, in order to safeguard our health, food supplies, biodiversity, and the prosperity of every community. Interior will undertake the process with broad engagement, including agricultural and forest landowners, fishermen, outdoor enthusiasts, sovereign Tribal nations, States, Territories, local officials, and others to identify strategies that reflect the priorities of all communities.

The Biden Administration will work to achieve this 30x30 goal by **supporting local, state, private, and tribally led nature conservation and restoration efforts** that are underway across America. Over the coming months, Interior will evaluate how to best measure and assess the country's progress toward the 30x30 goal, to properly account for the many

innovative and effective ways that communities are conserving their lands and waters for current and future generations. Interior will consider ways to achieve more equitable access to nature and its benefits for all people in America.

Approximately 60% of land in the continental U.S. is in a natural state, but we are losing a football field worth of it every 30 seconds. The decline of nature threatens wildlife; across the globe, approximately one million animal and plant species are at risk of extinction in the coming decades, [including one-third of U.S. wildlife](#).

The [U.S. Geological Survey reports](#) that only 12% of lands are permanently protected. Studies show that roughly 23% of America's ocean is currently strongly protected, with the vast majority of ocean protections found in the western Pacific Ocean.
