

What is Clearview Ai?

Clearview Ai is revolutionary facial recognition system created specifically for law enforcement and intelligence applications. It is now in use by hundreds of law enforcement agencies in the United States.

How does it work?

Using a simple web interface, the user uploads an image of a face. The system performs a search and returns results from a database of over 3 billion images. Results are ordered by similarity and include links to the source of the image.

Where are images sourced from?

Images come from public web sources, including news media, mugshot websites, and public social media. The large size of the database greatly increases the probability of finding relevant results. Additionally, users can import their own custom databases of any size.

How is Clearview Ai used?

The system is a powerful investigative tool which can aid in the following applications:

1. Identification of criminal suspects
 2. Study of a suspect's associations or whereabouts
 3. Establish linkages between synthetic identities
 4. Fraud investigation
 5. Criminal network discovery
 6. Identification of victims of human trafficking
 7. Force protection and area security
-

Is Clearview Ai accurate?

Clearview Ai is one of the most accurate facial-recognition technologies currently available. It rated 99.6% accurate using the industry-standard MegaFace test. The system has been reviewed for bias by an independent panel of experts and was found to outperform other major commercially available technologies.

Is Clearview Ai compliant?

Clearview Ai limits data collection to public sources only. Furthermore, the tool is designed to be used for law enforcement or intelligence analysis purposes in a controlled and supervised manner. We recommend that Clearview Ai systems be deployed alongside organizational policies for the responsible use of facial recognition technologies.

Clearview Ai takes an active approach to compliance and has developed the following tools to meet requirements of different agencies:

- Account administrator roles with audit privileges for all user searches
- Periodic purges of subject data according to privacy regulations
- Naming and numbering functions to link searches with casefiles
- PDF export of search results for the purposes of audit, review, or investigation
- On-premise system design and integration

How can I obtain Clearview Ai for my organization?

Contact the POC below to discuss setting up your organization with a free pilot program.
