

OVERVIEW

The study was conducted for CNN by SSRS, an independent research company. Surveys were obtained **January 10-February 6, 2022** with a representative sample of **n=1,527** respondents. Implementing a full probability design via **Address-Based Sampling (ABS)**, U.S. households were randomly selected to participate and were first reached via mail. Adults ages 18 or older completed the survey via web (**n=1,353**) or phone (**n=174**). The margin of sampling error for total respondents is +/- **3.3** at the 95% confidence level. The design effect is **1.73**. For results among the **n=1,257** registered voters, the margin of sampling error is +/- **3.6**. More information about SSRS can be obtained by visiting www.ssrs.com.

EMBARGOED FOR RELEASE: Friday, February 11 at 6:00 a.m.

NOTE ABOUT RESULTS

Results for the August 3-September 7, 2021 survey are from a poll conducted via web and phone that implemented a full probability design via Address-Based Sampling (ABS). Results for the January 13-18, 2022, December 8-12, 2021, and November 1-4, 2021 surveys are from a poll conducted via web and phone on the SSRS Opinion Panel. Results for the October 7-11, 2021, March 25-26, 2019, and September 21-22, 2020 surveys are from polls conducted via web on the SSRS Opinion Panel. Unless otherwise noted, all other results beginning with the August 3-6, 2017 survey and ending with the April 21-26, 2021 survey are from polls conducted by SSRS via telephone only.

Results beginning with the March 31-April 2, 2006 survey and ending with the April 22-25, 2017 survey are from telephone surveys conducted by ORC International. Results before March 31, 2006 are from telephone surveys conducted by Gallup.

Question text noted in parentheses was rotated or randomized. Values less than 0.5 percent are indicated by an asterisk (*).

NOTE ABOUT CROSSTABS

Surveys were conducted among a representative sample of the adult population, age 18 or older, of the United States. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum **N=125** unweighted cases. Results for subgroups with fewer than **N=125** unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

P9. How enthusiastic would you say you are about voting for Congress in this year's election? [RESPONSES ROTATED IN ORDER FOR HALF/IN REVERSE ORDER FOR HALF]

MORE ON METHODOLOGY

A total of n=1,527 adults were surveyed by web and telephone nationwide using an Address-Based Sample design. To invite potential respondents for the new poll, researchers mailed letters to each randomly selected address, asking an eligible adult, age 18 or older, in the household to take part in the survey. Those receiving the letters had the choice of taking the survey online or calling a dedicated phone number to take the poll with a live interviewer. For a subset of those addresses, phone calls were made later into the data collection period to attempt to complete the interview with those who had not yet taken the online survey or called in to take the survey. Surveys were conducted in English and Spanish.

Among the entire sample, **30%** described themselves as Democrats, **31%** described themselves as Republicans, and **39%** described themselves as independents or members of another party.

All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect national Census figures for gender, race, age, education, region of country, and population density. The sample was also weighted among self-reported 2020 voters for recalled 2020 vote within counties, grouped by county vote share for Biden and Trump. The benchmark for recalled 2020 vote was taken from county-level National Election Pool (NEP) presidential election results provided by CNN.

Results for the full sample have a margin of sampling error of +/- 3.3 percentage points. Results for registered voters have a margin of sampling error of +/- 3.6 percentage points.

Surveys were conducted among a representative sample of the adult population, age 18 or older, of the United States. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum n=125 unweighted cases. Results for subgroups with fewer than n=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

NN/SSRS Poll -- January 10, 2022 to February 06, 2022

TABLE 086
 Question 40f
 Of. Thinking about how public schools in the area where you live set their policies, for each of the following aspects of school administration, whose views should be most important in determining school policies? How about when it comes to the use of virtual learning in response to coronavirus? Whose views should be most important in determining school policies - those of parents, those of teachers and school officials, or should both be equally important?

Base: Total Respondents

| | Total | Men | Women | White | Ppl of Color | Black AfrAm | Hispanic Latino | Biden approve | Biden disapprove |
