Alex –

Just talked to Randy H of the SB Sheriff's Department. They would like to move forward but are unsure if they can get a judge to sign off on a warrant for this.

What they would like to do is first submit a warrant to the judge. If they get sign off, they would then want to do a live trail against a well known bad guy\*. If the systems proves itself in this live trial, and the judge is convinced of both its value and proper protection of privacy, they would then move into the purchase phase.

Before this can start Randy's DA would like to have a teleconference with you all so that she can learn enough about the system to be able to write the warrant. If you would provide me with dates/times when you could support this I will setup the conference.

\* well know bad guy:: they have a suspect they have been chasing for quite some time and have become convinced he is using an application on his phone that cannot be intercepted via normal means. This would be an actual, live intercept of a real suspect. If it works and the judge agrees this would establish a precedent for using your technology.
