## **About the Poll**

Civil Beat surveyed a random sample of 1,120 registered voters statewide. Surveys were fielded from June 28 – 30, 2022, using a combination of interactive voice response technology (touch-tone/IVR polling) and a survey administered online. Both the touch-tone and online version of the poll were conducted using random, probability-based sampling of registered voters in Hawai'i. The touch-tone version was conducted by contacting landline telephones. The online version was conducted by texting cellphones and linking poll participants to an online survey optimized for smartphones. Questions in the telephone and online versions of the survey were nearly identical, other than differences necessitated by the different platforms. The text-to-online version of the poll replaces our previous method of contacting cellphones via live call agents, but retains the same method to identify a randomly-selected subset of registered voters to contact. The text method of contacting cellphones yields a much higher survey completion rate and a more demographically diverse set of respondents than did the call-agent method. Approximately two thirds of the total sample completed the poll via text-to-online and the other one third completed it via calls to landline phones.

Results were weighted based on likelihood of voting and were balanced for gender, age, ancestry/ethnicity/race, county and Congressional District of residence, education (college degree attainment), and survey platform (text-to-online vs. landline IVR) to match the demographic parameters of registered voters statewide.

The overall margin of error is +/- 3 percentage points. Other sources of error, such as imperfect response rates and design effect (the effect of weighting results based on demographics) are also common in public opinion research and may affect the results. The adjusted margin of error, accounting for the design effect is also +/- 3 percentage points. The margin of error for any crosstabulated result is larger than the margin of error of the corresponding topline result.

Representative subsamples reported include 539 total registered voters in the First Congressional District, margin of error +/- 4 percentage points; 580 total registered voters in the Second Congressional District, margin of error +/- 4 percentage points; 780 registered voters on Oahu, margin of error +/- 4 percentage points; 782 statewide likely Democratic Party primary voters, margin of error +/- 4 percentage points; 390 First Congressional District likely Democratic Party primary voters, margin of error +/- 5 percentage points; 391 Second Congressional District likely Democratic Party primary voters, margin of error +/- 5 percentage points; and 269 statewide likely Republican Party primary voters, margin of error +/- 6 percentage points. Some columns may sum to totals slightly higher or lower than 100% due to rounding.

The poll was conducted by Civil Beat working with MRG Research, a public opinion research organization specializing in issues and candidate polling, message testing, and persuasive communications. Please follow us on Twitter: [@MRG\\_Research](https://twitter.com/MRG_Research)
