**RE: Freedom of Information Act request**

Dear Ms. Manheim:

This is a four-part request under the Freedom of Information Act, 5 U.S.C. § 552, et seq., to the National Center for Biotechnology Information (NCBI), which is a part of the National Library of Medicine (NLM) within the National Institutes of Health (NIH).

**Part I.** We request all SARS-related coronavirus sequences in the Sequence Read Archive (SRA) that have been submitted but that were not released, or that were deleted, killed, suppressed, withdrawn, or otherwise withheld from public view, including all accompanying information such as the accession number and authors.

**Part II.** We request all early genomic SARS-Cov-2 sequences or data that were submitted to the SRA by April 2020 but that have not been released, or that have been deleted, killed, suppressed, withdrawn, or otherwise removed from public view, including all accompanying information such as the accession number and authors.. This includes but is not limited to the eight SARS-CoV-2 submission packages from 1 Chinese submitter and 7 other submitters that were primarily in the US that Renate Myles referenced in her email to Carl Zimmer on June 23, 2021. Please see Attachment #1.

**Part III.** We request all sequences that have been submitted but not released, or that have been deleted, killed, suppressed, withdrawn, or otherwise removed from public view whose closest BLAST alignment is a SARS, SARS-CoV-2, or RaTG13 sequence.

**Part IV.** We request all emails requesting the withdrawal, suppression, killing, deletion, or removal from public view in the SRA of SARS-CoV-2, SARS, or SARS-related coronavirus sequences. This includes any data sets that might have contamination from viral reads. Please include any accompanying information such as the writer's name, subject heading, IP address, institutional affiliation, and date, as well as any attachments, cc, bcc, and all responses between the authors and the NIH.

Pursuing truth and transparency in public health

The requested time period is from January 1, 2016 to December 31, 2021.

We request that you disclose this data as it becomes available to you, without waiting until all query inputs have been assembled. If sequences are denied in whole or in part, please specify which exemption(s) is (are) claimed for each sequence denied. We request that excised material be "blacked out" rather than "whited out" or cut out and that the remaining non-exempt portions of documents be released as provided under the Freedom of Information Act.

Please advise of any destruction of records and include the date of and authority for such destruction. As we expect to appeal any denials, please specify the office and address to which an appeal should be directed.

### REQUEST FOR FEE WAIVER

FOIA was designed to provide citizens a broad right to access government records. FOIA's basic purpose is to "open agency action to the light of public scrutiny," with a focus on the public's "right to be informed about what their government is up to." *NARA v. Favish*, 541 U.S. 157, 171 (2004) quoting *U.S. Dep't of Justice v. Reporters Comm. for Freedom of Press*, 489 U.S. 749, 773-74 (1989) (internal quotation and citations omitted). In order to provide public access to this information, FOIA's fee waiver provision requires that "[d]ocuments shall be furnished without any charge or at a [reduced] charge," if the request satisfies the standard. 5 U.S.C. § 552(a)(4)(A)(iii). FOIA's fee waiver requirement is "liberally construed." *Judicial Watch, Inc. v. Rossotti*, 326 F.3d 1309, 1310 (D.C. Cir. 2003); *Forest Guardians v. U.S. Dept. of Interior*, 416 F.3d 1173, 1178 (10th Cir. 2005).

The 1986 fee waiver amendments were designed specifically to provide non-profit organizations such as U.S. Right to Know access to government records without the payment of fees. Indeed, FOIA's fee waiver provision was intended "to prevent government agencies from using high fees to discourage certain types of requesters and requests," which are "consistently associated with requests from journalists, scholars, and *non-profit public interest groups*." *Ettlinger v. FBI*, 596 F. Supp. 867, 872 (D. Mass. 1984) (emphasis added). As one Senator stated, "[a]gencies should not be allowed to use fees as an offensive weapon against requesters seeking access to Government information ... ." 132 Cong. Rec. S. 14298 (statement of Senator Patrick Leahy).

#### I. U.S. Right to Know Qualifies for a Fee Waiver.

Under FOIA, a party is entitled to a fee waiver when "disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the [Federal] government and is not primarily in the commercial interest of the requester." 5 U.S.C. § 552(a)(4)(A)(iii).

Thus, the NIH must consider six factors to determine whether a request is in the public interest: (1) whether the subject of the requested records concerns “the operations or activities of the Federal government,” (2) whether the disclosure is “likely to contribute” to an understanding of government operations or activities, (3) whether the disclosure “will contribute to public understanding” of a reasonably broad audience of persons interested in the subject, (4) whether the disclosure is likely to contribute “significantly” to public understanding of government operations or activities. *Id.* § 2.107(1)(2), (5) whether a commercial interest exists and its magnitude, and (6) the primary interest in disclosure. As shown below, U.S. Right to Know meets each of these factors.

A. The Subject of This Request Concerns “The Operations and Activities of the Government.”

The subject matter of this request concerns information about the origins of the COVID-19 pandemic which may be held within NIH’s databases and online analytic platforms. This request asks for records associated with early SARS-CoV-2 sequences or highly-related viruses that may not have been disclosed to the public.

This FOIA will provide U.S. Right to Know and the public with crucial knowledge of the origins of SARS-CoV-2 that may be contained within NIH’s data or information management systems. It is clear that a federal agency’s knowledge of health, safety and security threats, both foreign and in the U.S., is a specific and identifiable activity of the government, and in this case, it is the executive branch agency of the NIH. *Judicial Watch*, 326 F.3d at 1313 (“[R]easonable specificity is all that FOIA requires with regard to this factor”) (internal quotations omitted). Thus, U.S. Right to Know meets this factor.

B. Disclosure is “Likely to Contribute” to an Understanding of Government Operations or Activities.

The requested records are meaningfully informative about government operations or activities and will contribute to an increased understanding of those operations and activities by the public.

Disclosure of the requested records will allow U.S. Right to Know to convey to the public information about the NIH’s data platforms that can be used to study and understand the COVID-19 pandemic. Once the information is made available, U.S. Right to Know will analyze it and present it to the general public in a manner that will meaningfully enhance the public’s understanding of this topic.

Thus, the requested records are likely to contribute to an understanding of the NIH’s activities and operations in relation to understanding and mitigating pandemics.

C. Disclosure of the Requested Records Will Contribute to a Reasonably Broad Audience of Interested Persons’ Understanding of the origins of the COVID-19 pandemic.

The requested records will contribute to public understanding of whether the NIH's data platforms and repositories are consistent with its mission and purpose "to develop, maintain, and renew scientific human and physical resources that will ensure the Nation's capability to prevent disease." As explained above, the records will contribute to public understanding of this topic.

Activities of the NIH generally, and specifically its oversight of pandemics such as the COVID-19 pandemic as well as associated data, are areas of interest to a reasonably broad segment of the public. U.S. Right to Know will use the information it obtains from the disclosed records to educate the public at large about this topic. See *W. Watersheds Proj. v. Brown*, 318 F. Supp.2d 1036, 1040 (D. Idaho 2004) (finding that "WWP adequately specified the public interest to be served, that is, educating the public about the ecological conditions of the land managed by the BLM and also how ... management strategies employed by the BLM may adversely affect the environment").

Through U.S. Right to Know's synthesis and dissemination (by means discussed in Section II, below), disclosure of information contained in and gleaned from the requested records will contribute to a broad audience of persons who are interested in the subject matter. *Ettlinger v. FBI*, 596 F. Supp. at 876 (benefit to a population group of some size distinct from the requester alone is sufficient); *Carney v. Dept. of Justice*, 19 F.3d 807, 815 (2d Cir. 1994), *cert. denied*, 513 U.S. 823 (1994) (applying "public" to require a sufficient "breadth of benefit" beyond the requester's own interests); *Cnty. Legal Servs. v. Dep't of Hous. & Urban Dev.*, 405 F. Supp.2d 553, 557 (E.D. Pa. 2005) (in granting fee waiver to community legal group, court noted that while the requester's "work by its nature is unlikely to reach a very general audience," "there is a segment of the public that is interested in its work").

Indeed, the public does not currently have an ability to easily evaluate the requested records, which are not currently in the public domain. See *Cnty. Legal Servs.*, 405 F. Supp.2d at 560 (because requested records "clarify important facts" about agency policy, "the CLS request would likely shed light on information that is new to the interested public."). As the Ninth Circuit observed in *McClellan Ecological Seepage Situation v. Carlucci*, 835 F.2d 1282, 1286 (9th Cir. 1987), "[FOIA] legislative history suggests that information [has more potential to contribute to public understanding] to the degree that the information is new and supports public oversight of agency operations... ." <sup>(1)</sup>

Disclosure of these records is not only "likely to contribute," but is certain to contribute to public understanding of NIH's work toward understanding the COVID-19 pandemic, mitigating the risk of future such pandemics, and managing publicly accessible databases that can be used to understand and study pandemics.

## II. Disclosure is Likely to Contribute Significantly to Public Understanding of Government Operations or Activities.

U.S. Right to Know is not requesting these records merely for their intrinsic informational value. Disclosure of the requested records will significantly enhance the public's understanding of the worth and usefulness of NIH's public online data and analysis platforms that can be used to study pathogens with pandemic potential, as compared to the level of public understanding that existed prior to the disclosure. Indeed, public understanding will be *significantly* increased as a result of disclosure because the requested records will help reveal more about this subject matter.

The records are also certain to shed light on the NIH's faithfulness to its own mission and purpose. Such public oversight of agency action is vital to our democratic system and clearly envisioned by the drafters of the FOIA. Thus, U.S. Right to Know meets this factor as well.

### III. Obtaining the Requested Records is of No Commercial Interest to U.S. Right to Know.

Access to government records, disclosure forms, and similar materials through FOIA requests is essential to U.S. Right to Know's role of educating the general public. Founded in 2014, U.S. Right to Know is a 501(c)(3) nonprofit public interest, public health organization (EIN: 46-5676616). U.S. Right to Know has no commercial interest and will realize no commercial benefit from the release of the requested records.

### IV. U.S. Right to Know's Primary Interest in Disclosure is the Public Interest.

As stated above, U.S. Right to Know has no commercial interest that would be furthered by disclosure. Although even if it did have an interest, the public interest would far outweigh any pecuniary interest.

U.S. Right to Know is a non-profit organization that informs, educates, and counsels the public regarding corporate wrongdoing and government failures that threaten the integrity of our food system, our environment, and our health. U.S. Right to Know has been substantially involved in the activities of numerous government agencies for over seven years, and has consistently displayed its ability to disseminate information granted to it through FOIA.

In granting U.S. Right to Know's fee waivers, agencies have recognized: (1) that the information requested by U.S. Right to Know contributes significantly to the public's understanding of the government's operations or activities; (2) that the information enhances the public's understanding to a greater degree than currently exists; (3) that U.S. Right to Know possesses the expertise to explain the requested information to the public; (4) that U.S. Right to Know possesses the ability to disseminate the requested information to the general public; (5) and that the news media recognizes U.S. Right to Know as an established expert in the field of public health. U.S. Right to Know's track record of active participation in oversight of governmental activities and decision making, and its consistent contribution to the public's understanding of those activities as compared to the level of public understanding prior to disclosure, are well established.

U.S. Right to Know intends to use the records requested here similarly. U.S. Right to Know's work appears frequently in news stories online and in print, radio and TV, including reporting in outlets such as *The New York Times* and *The Guardian*, as well as medical and public health journals such as the *BMJ*. Many media outlets have reported about the food and chemical industries using information obtained by U.S. Right to Know from federal agencies. In 2021, more than 525,000 people visited U.S. Right to Know's extensive website, and viewed pages a total of one million times. More than 9,300 people follow U.S. Right to Know on Facebook where there are regular postings about transparency in issues of public health and the environment. U.S. Right to Know and its staff regularly tweet to a combined following of more than 50,000 on Twitter. U.S. Right to Know intends to use any or all of these media outlets to share with the public information obtained as a result of this request.

Public oversight and enhanced understanding of the NIH's functions is absolutely necessary. In determining whether disclosure of requested information will contribute significantly to public understanding, a guiding test is whether the requester will disseminate the information to a reasonably broad audience of persons interested in the subject. *Carney*, 19 F.3d 807. U.S. Right to Know need not show how it intends to distribute the information, because "[n]othing in FOIA, the [agency] regulation, or our case law require[s] such pointless specificity." *Judicial Watch*, 326 F.3d at 1314. It is sufficient for U.S. Right to Know to show how it distributes information to the public generally. *Id.*

Please send the documents electronically in PDF format to Karolina Corin at [karolina@usrtk.org](mailto:karolina@usrtk.org).

Please do not hesitate to contact us if you want to discuss how to carry out any part of this FOIA request.

If there are any problems with this FOIA request, or if you need additional information about it, please call, rather than write, Gary Ruskin. He can be reached at (415) 944-7350.

Thank you very much for your help in filling this request.

Sincerely,

Karolina Corin, PhD  
Staff Scientist

**Date:** Wednesday, June 23, 2021 4:49:00 PM

---

Hi Carl:

I saw your story. Just noting that it isn't a mystery. The researcher asked for it be withdrawn and it was withdrawn. Also, it didn't disappear; it was removed per the submitter's request. Off the record: I know that Dr. Bloom is making the mystery part of the narrative of his paper, but we expected reporters not hype language.

Also, just to clarify, NLM conducted an analysis and found that eight SARS-COV-2 submission packages were withdrawn upon request of the submitter since the beginning of the pandemic. This included one requested by the submitter from China and the rest from submitters predominantly in the U.S.

Thanks,  
Renate
