| <p>When multiplying a given number by a fraction less than 1 or a fraction greater than 1, predict and explain the relative size of the product to the given number without calculating.</p> <p>MA.5.FR.2.3</p>                                | <p>n/a</p> | <p>Reviewer 2 states that "Examples in the text call for completing an operation to figure out the relative comparison. The BEST standards state that students should be able to focus on estimation and assessing the reasonableness of answers."</p> <p>HMH Response: Students learn estimation and assessing the reasonableness of answers by comparing products using the whole number part of the mixed number. In Lessons 10.3 and 10.4, students use models to compare the size of the product to the size of a factor when multiplying fractions. Students then determine that when you find a part of a part, the product will be less than either part. Finally, students understand that when a fraction is multiplied by a number greater than 1, the product will always be greater than the fraction. Building reasoning about the size of a product will help students determine if their solutions are reasonable or help them make reasonable estimates.</p> | <p>Lessons 10.3<br/><a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a></p>                                                                                                                                                 |   |
| <p>Classify triangles or quadrilaterals into different categories based on shared defining attributes. Explain why a triangle or quadrilateral would or would not belong to a category.</p> <p>MA.5.GR.1.1</p>                                 | <p>n/a</p> | <p>Reviewer 1 stated this benchmark coverage 2 points higher, noting "lots of practice with triangles and quadrilaterals."</p> <p>Reviewer 2, on the other hand, states that "Examples classify more than what is necessary. Addresses various polygons not addressed in the BEST standards."</p> <p>HMH Response: Polygons shown are review material, and are also used in 3D prisms; such as the right pentagonal prism on p.491.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Lesson 14.4<br/><a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a></p>                                                                                                                                                  |   |
| <p>Identify and classify three-dimensional figures into categories based on their defining attributes. Figures are limited to right pyramids, right prisms, right circular cylinders, right circular cones and spheres.</p> <p>MA.5.GR.1.2</p> | <p>n/a</p> | <p>Reviewer 2 states "Extraneous material in lesson. Examples should be limited to right pyramids, right prisms, right circular cylinders, right circular cones and spheres."</p> <p>HMH Response: Pentagonal prism with equal sides and angles that are shown are right prisms, which are included in the benchmarks, p. 491.</p> <p>Reviewer 1 states "Chapter 10, Lesson 5 is not in 5th grade standards; perhaps middle school?"</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Lesson 14.4<br/><a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a></p>                                                                                                                                                  |   |
| <p>Find the perimeter and area of a rectangle with fractional or decimal side lengths using visual models and formulas.</p> <p>MA.5.GR.2.1</p>                                                                                                 | <p>n/a</p> | <p>HMH Response: This shows benchmarks NOT taught in isolation and is an example of a problem-solving lessons that demonstrates how to solve benchmarks 5.FR.2.2 and 5.FR.2.3. Examples of fractional and decimal side lengths in Lessons 13.1, p.447-450 and 13.2, p.453-456</p> <p>Reviewer 2 rated this benchmark coverage 2 points higher with a 4, noting "Questions cover both fractional and decimal side lengths."</p> <p>Reviewer 1 states that in Lesson 17.3, p.591, students write the ordered pairs to find the rule.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Lesson 10.5<br/><a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a></p> <p>Lesson 13.1<br/><a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a></p> |   |
| <p>Identify the origin and axes in the coordinate system. Plot and label ordered pairs in the first quadrant of the coordinate plane.</p> <p>MA.5.GR.4.1</p>                                                                                   | <p>n/a</p> | <p>HMH Response: This is also an example of using standards together and not in isolation. (with 5.GR.4.1 and 5.GR.4.2)</p> <p>Reviewer 2 rated this benchmark coverage 2 points higher with a 4, notes "Materials fairly instruct how to plot and label points."</p> <p>Reviewer 1 states: Conversion included length, volume, and capacity; however, there were no time conversion present."</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Lesson 17.3<br/><a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a></p>                                                                                                                                                  |   |

| 4 | n/a                                                                                                                                                             | n/a                                      | Overall HMH Response: These standards are also found in Grade 6 and 7 of HMH Florida's Best Into Math--both grades which were approved for the adoption list. This program contains the same content as Grade 6 and part of Grade 7.<br><br>While Reviewer 2 scored the content a 5 and stated, "standard is covered completely; all properties are defined and practiced throughout the lesson." Reviewer 1, on the other hand, stated that Clarification 1 (Associative, Commutative, Distributive applied to generating equivalent algebraic expressions) is "not represented".<br><br>HMH Response: In the lesson interleaf for Lesson 8.4 on page 261A, the Associative Property of Addition, Associative Property of Multiplication, Commutative Property of Addition, Commutative Property of Multiplication, and Distributive Property are all listed as review vocabulary. These properties are all defined, with examples, in a table on SE page 262. Additionally, tasks 2 and 3 on pages 262-263 of the SE require students to list the property used in each step of simplifying an expression. On Your Own problems 3, 6, 14, 15, and 19 on pages 264-265, More Practice/Homework problems 6 and 7 on page 267, and Florida Test Prep problem 10 require students to justify their work using properties. |   | Lesson 8.4, p.262<br><a href="https://www.hmhco.com/FL_SE_M08_Numerical.c5cd-11ec-b2c9-4d07eb4">https://www.hmhco.com/FL_SE_M08_Numerical.c5cd-11ec-b2c9-4d07eb4</a>                                                                                                                                                                                                                                                                                                                                                             |
| 5 | MA.6.AR.1.4<br><br>Apply the properties of operations to generate equivalent algebraic expressions with integer coefficients.                                   | n/a                                      | Reviewer 1 stated that this standard was not represented because set notation was not used.<br><br>HMH Response: Set notation is not a requirement of the benchmark, shown in the example, or mentioned in the clarification. Integers are used in the language of the benchmark.<br><b>Equations</b> - On page 284, Task 4 parts E and F use substitution for a single value. Check Understanding problems 2-4 on page 284 use substitution for a single value. On Your Own problems 10-15 on page 285 have students substitute multiple values. On Your Own problems 16-17 on page 286 have students substitute multiple values. More Practice/Homework problems 7-10 on page 287 have students substitute for a single value. Page 285 problem 11 is the only one involving rational numbers and not just integers. Lessons 9.2 and 9.3 have students use what they learned in lesson 9.1 to check their solutions to equations.<br><b>Inequalities</b> - Lesson 10.1 (pages 322-325 and 327) covers the benchmark for inequalities.                                                                                                                                                                                                                                                                                 |   | Lesson 8.4, pp. 283<br><a href="https://www.hmhco.com/FL_SE_M08_Numerical.c5cd-11ec-b2c9-4d07eb4">https://www.hmhco.com/FL_SE_M08_Numerical.c5cd-11ec-b2c9-4d07eb4</a><br><br>Lessons 9.2-9.3, pp. 285<br><a href="https://www.hmhco.com/FL_SE_M09_Solve_Prob.11ec-8e6f-ab5d0d29724">https://www.hmhco.com/FL_SE_M09_Solve_Prob.11ec-8e6f-ab5d0d29724</a><br><br>Lesson 10.1, pp. 322-327<br><a href="https://www.hmhco.com/FL_SE_M10_Inequalities.41d7/a4ec30a4">https://www.hmhco.com/FL_SE_M10_Inequalities.41d7/a4ec30a4</a> |
| 6 | MA.6.AR.2.1<br><br>Given an equation or inequality and a specified set of integer values, determine which values make the equation or inequality true or false. | n/a                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 12 | <p>MA.6.DP.1.3<br/>Given a box plot within a real-world context, determine the minimum, the lower quartile, the median, the upper quartile and the maximum. Use this summary of the data to describe the spread and distribution of the data.</p> | n/a | <p>Reviewer 1 stated that "instruction does not include vertical representation of box plot." Instruction includes horizontal representation of box plots.<br/>HMH Response: Vertical box plots are not mentioned anywhere in the benchmark, example, or clarification. We fully cover the benchmark and clarification in lessons 19.2 (pages 629-636) and 19.4 (pages 643-648).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Lesson 19.2, pp. 629-636<br/><a href="https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11">https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11</a></p>                                                                                                                                              |   |
| 13 | <p>MA.6.DP.1.4<br/>Given a histogram or line plot within a real-world context, qualitatively describe and interpret the spread and distribution of the data, including any symmetry, skewness, gaps, clusters, outliers and the range.</p>        | n/a | <p>Reviewer 1 stated that "instruction limited to skewed description . . . and does not focus on describing data as Normal or Bimodal."<br/>HMH Response: Instruction does not focus on describing data as Normal or Bimodal. The benchmark does not mention Bimodal or Normal. The clarification (Appendix C) does not contain Bimodal or Normal in the glossary. We fully cover the benchmark in lessons 19.1 (pages 621-628) and 19.4 (pages 643-648).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Lesson 19.1, pp. 621-628<br/><a href="https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11">https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11</a></p>                                                                                                                                              |   |
| 14 | <p>MA.6.NSO.1.3<br/>Given a mathematical or real-world context, interpret the absolute value of a number as the distance from zero on a number line. Find the absolute value of rational numbers.</p>                                             | n/a | <p>Reviewer 2 stated that "lessons needs various number lines . . . and more practice with absolute value of rational numbers."<br/>HMH Response: Lesson 1.3 contains three horizontal number lines (pages 19, 20, and 21) and two vertical number lines (pages 20 and 22). Students explicitly find the absolute value of a number eight times in the tasks on pages 20 and 21 and eight practice problems on pages 22 and 23. Students must find absolute value in the process of solving other problems in the tasks and practice problems. The benchmark and clarifications are fully covered in lesson 1.3.</p>                                                                                                                                                                                                                                                                                                                                                                                 | <p>Lesson 1.3, pp.19-24<br/><a href="https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052">https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052</a></p>                                                                                                                                                              |   |
| 15 | <p>MA.6.NSO.2.2<br/>Extend previous understanding of multiplication and division to compute products and quotients of positive fractions by positive fractions, including mixed numbers, with procedural fluency.</p>                             | n/a | <p>Reviewer 1 stated that "instruction was limited to multiplication, no division."<br/>HMH Response: Fraction multiplication is covered in Module 2, lessons 2.1-2.3. Fraction division is covered in Module 3, lessons 3.1-3.3. Lesson 3.4 allows students to practice a mixture of multiplication and division of fractions. Modules 2 and 3 fully cover the benchmark and clarification. (Screenshots of TOC for Modules 2 and 3 provided.)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>Lessons 2.1-2.3, pp. 43-49<br/><a href="https://www.hmhco.com/FL_SE_M02_Fraction_N9f3b4a237db7">https://www.hmhco.com/FL_SE_M02_Fraction_N9f3b4a237db7</a></p> <p>Lessons 3.1-3.4, pp.67-94<br/><a href="https://www.hmhco.com/FL_SE_M03_Fraction_D33fe954f0a4e">https://www.hmhco.com/FL_SE_M03_Fraction_D33fe954f0a4e</a></p> |   |
| 16 | <p>MA.6.NSO.3.2<br/>Rewrite the sum of two composite whole numbers having a common factor, as a common factor multiplied by the sum of two whole numbers.</p>                                                                                     | n/a | <p>While Reviewer 2 rated us a 4 and he noted "benchmark is covered with GCF"; Reviewer 1 stated that the benchmark was not met, with no specific evidence.<br/>HMH Response: Lesson 1.4 Task 2 on page 26 covers GCF and reminds students of the Distributive Property. The end of Task 2 has students re-write <math>24 + 16</math> as <math>8(3) + 8(2) = 8(3 + 2)</math>. This is also practiced in problems on pages 31-32. The benchmark and clarification are fully covered in lesson 1.4.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Lesson 1.4, p.25-32<br/><a href="https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052">https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052</a></p>                                                                                                                                                               |   |
| 17 | <p>MA.7.AR.1.2<br/>Determine whether two linear expressions are equivalent.</p>                                                                                                                                                                   | n/a | <p>Reviewer 2 stated that lessons "need more practice with fraction coefficients".<br/>HMH Response: This benchmark is covered in Lessons 8.4 and 8.5. Most of the use of rational coefficients is used in Lesson 8.5, when students are more familiar and confident in working with linear expressions.<br/>Lesson 8.4: Rational coefficients are used in Task 2 on page 262 (1 fractional), Check Understanding problem 2 on page 263, On Your Own problems 12, 16, 24, and 28 on pages 264-266 (3 fractional), and More Practice/Homework problem 8 (fractional) on page 267.<br/>Lesson 8.5: Rational coefficients are used in Task 1 on page 269 (fractional), Task 2 on page 270, Check Understanding problem 4 (fractional) on page 271, On Your Own problems 5, 10, 13, 16, 17, 18, 19, 20, 23, 26, and 30 on pages 272-274 (7 fractional), More Practice/Homework problems 1, 6, and 8 on page 275 (2 fractional), and Florida Test Prep problems 12 and 13 on page 276 (1 fractional).</p> | <p>Lessons 8.4 and 8.5, pp.<br/><a href="https://www.hmhco.com/FL_SE_M08_Numerical_c5cd-11ec-b2e9-4d07eb4">https://www.hmhco.com/FL_SE_M08_Numerical_c5cd-11ec-b2e9-4d07eb4</a></p>                                                                                                                                                |   |

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

COURSE #5012030\_HMH Florida's B.E.S.T. Go Math! Grade 1

BID 455

Standard Below 3 (if applicable)

Special Topic Concern (If applicable)

Publisher Correction

Link to

n/a

n/a

HMH Overall Response: After collecting and analyzing all the scores provided by the reviewers on Grade 1, we believe there was an error in calculations with the scores and that this grade did in fact score a 4. Nonetheless, we have provided responses to any standards where at least one reviewer scored us a 3 or below.

Reviewer 1 rates us a 5 here and indicates that " Items focus on true and false. There is a mix of operations being related on both sides of the question as well as opportunities for multiple addends.

Reviewer 2s, on the other hand, states that there were too many terms in the equations. They indicated that "The Listen and Draw on p.477, #13 on p.480, and #7 on 481 contain 5 terms, which does not align to the standard and clarifications."

HMH Response: There are no more than 3 terms used on one side of an equation. On p. 477; p. 480 and 481 each have only a single equation that shows two terms on one side of the equation and three terms on the other.

Additionally, Reviewer 2 wrote that the lesson does "not focus on the meaning of the equal sign.

HMH Response: The Math Talk on p. 477 addresses the meaning of the equal sign.

MA.1.AR.2.2

Determine and explain if equations involving addition or subtraction are true or false.

n/a

MA.1.DP.1.1  
Collect data into categories and represent the results using tally marks or pictographs.

n/a

Reviewer 2 writes that Clarification 1 calls for students to use "tally marks to skip counting by 5's."

HMH Response: Clarification 1 states that students should connect tally marks to counting by 5s, but does not state the expectation that students should skip count tally marks.

| 10 | <p>MA.1.GR.1.4</p> <p>Given a real-world object, identify parts that are modeled by two- and three-dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares and hexagons, spheres, cubes, rectangular prisms, cones and cylinders.</p> | n/a | <p>Reviewer 1 states that "While there are many examples of real-world objects for stand alone figures (balls, cones, cans, etc.), there are only a few real-world examples of items with multiple identifiable geometric figures . . ." In most other examples, they are identifying the geometric figures in composed shapes.</p> <p>HMH Response: The composite figures were included; however because of their age appropriateness for Grade 1 students. The approach also meets the standard as it is written.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |   | <p>Lesson 11.2<br/>Dimensional<br/><a href="https://www.go_math/ge_EN_FL_SE">https://www.go_math/ge_EN_FL_SE</a><br/>Dimensional<br/>ation_id=9a89f9ac384f</p> |
| 11 | <p>MA.1.M.1.1</p> <p>Estimate the length of an object to the nearest inch. Measure the length of an object to the nearest inch or centimeter.</p>                                                                                                                      | n/a | <p>Reviewer 1 gave us a positive score of 5--a difference of 3 points from Reviewer 2. This reviewer specifically said "Items align to the standard for estimation."</p> <p>Reviewer 2, on the other hand, states that "The clarifications were clear that students would be estimating with inches. Chapter 14 Lesson 3 focuses on estimating with centimeters."</p> <p>HMH Response: The standard is written as follows "Measure the length of an object to the nearest inch or centimeter" so the content as presented meets the standards as they are written.</p> <p>Additionally, reviewer 2 was concerned that non-standard units are used for estimating.</p> <p>HMH Response: The tiles and cubes used for measurement are not non-standard units of measure; the tiles are specified to be 1-inch and the unit cubes are 1 cm; this builds an understanding of the connection between counting and then adding units to measurement. Given how this benchmark and the clarifications, we believe this standard is completely met.</p> |   |   | <p>Lessons 14.<br/>pp.595-616<br/><a href="https://www.go_math/ge_EN_FL_SE">https://www.go_math/ge_EN_FL_SE</a><br/>custom_cort<br/>c311-4a93-8</p>            |
| 12 | <p>MA.1.M.1.2</p> <p>Compare and order the length of up to three objects using direct and indirect comparison.</p>                                                                                                                                                     | n/a | <p>Reviewer 1 gave us a positive score of 5 (a disparity of 3 points with reviewer 2) and stated "Opportunities for 3 items compared directly and also for indirect comparison."</p> <p>Reviewer 2, on the other hand, states that "Chapter 14 Lesson 3 does not align as it discusses estimating measurement instead of comparing objects in specific units."</p> <p>HMH Response: Students use comparisons of longer or shorter objects so that they can estimate their lengths. More specifically, in 14.5 students compare objects to order them, as stated by the standard.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |   | <p>Lesson 14.3.<br/>609<br/><a href="https://www.go_math/ge_EN_FL_SE">https://www.go_math/ge_EN_FL_SE</a><br/>custom_cort<br/>c311-4a93-8</p>                  |
| 13 | <p>MA.1.M.2.1</p> <p>Using analog and digital clocks, tell and write time in hours and half-hours.</p>                                                                                                                                                                 | n/a | <p>Reviewer 2 states that "there is no discussion or use of the vocabulary for digital and analog" within the lessons 15.1-15.4.</p> <p>HMH Response: The benchmark specifies only that students write and tell time and not that they use specified vocabulary. Clocks divided into semicircles is shown in Lesson 15.3.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |   | <p>Lessons 15.1<br/><a href="https://www.go_math/ge_EN_FL_SE">https://www.go_math/ge_EN_FL_SE</a><br/>_correlation<br/>b8ed-8b01a</p>                          |
| 14 | <p>MA.1.M.2.2</p> <p>Identify pennies, nickels, dimes and quarters, and express their values using the ¢ symbol. State how many of each coin equal a dollar.</p>                                                                                                       | n/a | <p>Reviewer 1 states that students count but do not simply identify coins--that the resources should "provide images of both sides of coins."</p> <p>HMH Response: Identification of the coin is necessary to count them. This is why both sides of the coin are used throughout this chapter in order to reinforce their ability to identify and count coins.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |   | <p>Lesson 9.1-<br/><a href="https://www.go_math/ge_EN_FL_SE">https://www.go_math/ge_EN_FL_SE</a><br/>_correlation<br/>4fb1-a6ad-7</p>                          |

Students are not given examples of expanded form in this lesson based on the benchmark expectation.</p>                               |   | <p>Lesson 2.1 shows multiple uses of expanded form and word form. Lessons 2.2 and 2.3 includes reading word forms of numbers.<br/> Lesson 2.1: pp. 50-52 expanded form<br/> Lesson 2.9: pp. 98-99</p> |
| 17 | <p>and Lesson 6.10, pp.<br/> <a href="http://hmhco.com/content/math/student/pdf/G1_GoMath_E_CO6_Addition_Strategie_n_correlation_id=68824cb-82e4-32a97dd995d9">.hnhco.com/content/math/student/pdf/G1_GoMath_E_CO6_Addition_Strategie_n_correlation_id=68824cb-82e4-32a97dd995d9</a></p>                                                                                                                                                                                                                        | <p>Instruction of this benchmark should allow students to explore more examples of adding 2 digit and 1 digit numbers, in addition to to combining ones and tens as mentioned in clarification 1.</p> |   | <p>In Lesson 6.10, students explore many examples of 2-digit plus 1-digit addition, including making a new 10 from ones.<br/> Lesson 6.10: pp. 303-306</p>                                            |
| 18 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                       |   |                                                                                                                                                                                                       |

| 7  | <p>MA.5.DP.1.2<br/>Interpret numerical data, with whole-number values, represented with tables or line plots by determining the mean, mode, median or range.</p>                                             | n/a | <p>While Reviewer 1 rated this benchmark coverage a full 3 points higher, noting that the benchmark coverage includes "instruction on balancing point", Reviewer 2 states "Explanations on how to find mean, mode, and median are aligned; however there is no mention of range."<br/>HMH Response: In the content, range is explicitly defined and demonstrated in Lesson18.2, p.635 and Lesson 18.5, p. 655.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Lesson 18.2<br><a href="https://www.net_Data.pdf">https://www.net_Data.pdf</a>                                                                             |
| 8  | <p>MA.5.FR.2.2<br/>Extend previous understanding of multiplication to multiply a fraction by a fraction, including mixed numbers and fractions greater than 1, with procedural reliability.</p>              | n/a | <p>While Reviewer 1 rated this benchmark coverage a full 3 points higher, noting that coverage includes a "use of models," Reviewer 2 states that mixed numbers were "used in comparative lessons only. Students are directed to simplify answers which is not necessary."<br/>HMH Response: Extensive mixed number multiplication is shown in Lesson 9.4, p.357 which is a comparison lesson; comparison is essential to multiplying mixed numbers for estimating products and assessing reasonableness. Also performed with area models in Lesson 13.2, p. 453. Both are examples of not showing the standards in isolation (with 5.GR.2.1).</p>                                                                                                                                                                                                                                                                                                                         | Lesson 9.4,<br><a href="https://www.nd_Mixed_1">https://www.nd_Mixed_1</a><br>Lesson 13.2<br><a href="https://www.angles_with">https://www.angles_with</a> |
| 9  | <p>MA.5.FR.2.3<br/>When multiplying a given number by a fraction less than 1 or a fraction greater than 1, predict and explain the relative size of the product to the given number without calculating.</p> | n/a | <p>Reviewer 2 states that "Examples in the text call for completing an operation to figure out the relative comparison. The BEST standards state that students should be able to focus on estimation and assessing the reasonableness of answers."<br/>HMH Response: Students learn estimation and assessing the reasonableness of answers by comparing products using the whole number part of the mixed number. In Lessons 10.3 and 10.4, students use models to compare the size of the product to the size of a factor when multiplying fractions. Students then determine that when you find a part of a part, the product will be less than either part. Finally, students understand that when a fraction is multiplied by a number greater than 1, the product will always be greater than the fraction. Building reasoning about the size of a product will help students determine if their solutions are reasonable or help them make reasonable estimates.</p> | Lessons 10.3<br><a href="https://www.correlation">https://www.correlation</a>                                                                              |
| 10 | <p>MA.5.GR.1.1<br/>Classify triangles or quadrilaterals into different categories based on shared defining attributes. Explain why a triangle or quadrilateral would or would not belong to a category.</p>  | n/a | <p>Reviewer 1 stated this benchmark coverage 2 points higher, noting "lots of practice with triangles and quadrilaterals."<br/>Reviewer 2, on the other hand, states that "Examples classify more than what is necessary. Addresses various polygons not addressed in the BEST standards."<br/>HMH Response: Polygons shown are review material, and are also used in 3D prisms; such as the right pentagonal prism on p.491.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Lesson 14.4<br><a href="https://www.correlation">https://www.correlation</a>                                                                               |

|    | E                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | F                                                                                    | G |

| 17 | Lesson aligns.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                   |   |
| 18 | Students have multiplied multi-digit numbers in Grade 4, so in Lesson 1.1, students extend and apply that knowledge. Students estimate and then find the product of multi-digit whole numbers. Problems 3–33 do not specify that students must use a standard algorithm to find the product. Students have learned various methods in previous grades and can apply the method of choice while multiplying multi-digit numbers in Grade 5.<br>Lesson 1.1, p.9, 10, 11, 12                                                                                                                                                                                                                                | <a href="https://hmhco.box.com/s/tjee67y3msgphca5iyujc9ovw2gl1h54j">https://hmhco.box.com/s/tjee67y3msgphca5iyujc9ovw2gl1h54j</a> |   |
| 19 | Students represent remainders as fractions, not in simplest form, for all problems with remainders throughout the following lessons.<br>In Lesson 1.3, Partial Quotients, students divide multi-digit whole numbers by 2-digit divisors using partial quotients.<br>In Lesson 2.1, Divide by 2-Digit Divisors, divide multi-digit whole numbers by 2-digit divisors using standard algorithm.<br>In Lesson 2.2, Interpret the Remainder, students represent the remainder as a fraction and interpret the remainder based on the problem situation.<br>Lesson 2.3, Adjust Quotients, students estimate quotients for division of multi-digit whole numbers by 2-digit divisors using standard algorithm. | <a href="https://hmhco.box.com/s/wqg0xbmqobbii8lm4j0i72ei09xio">https://hmhco.box.com/s/wqg0xbmqobbii8lm4j0i72ei09xio</a>         |   |
| 20 | Lesson 1.3, p.19, 20, 21, 22<br>Lesson 2.1, p.39, 40, 41, 42<br>Lesson 2.2, p.45, 47, 48, 49<br>Lesson 2.3, p.51, 52, 53, 55                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                   |   |

COURSE #1205020 HMH Florida's B.E.S.T. Into Math Accelerated Grade 6

BIID 465

Publisher Correction

| 1 | Standard Below 3 (if applicable)                                                                                                                                       | Special Topic Concern (if applicable) | Overall HMH Response: These standards are also found in Grade 6 and 7 of HMH Florida's Best Into Math--both grades which were approved for the adoption list. This program contains the same content as Grade 6 and part of Grade 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 3 | Standard Below 3 (if applicable)                                                                                                                                       | Special Topic Concern (if applicable) | Overall HMH Response: These standards are also found in Grade 6 and 7 of HMH Florida's Best Into Math--both grades which were approved for the adoption list. This program contains the same content as Grade 6 and part of Grade 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 4 | n/a                                                                                                                                                                    | n/a                                   | <p>While Reviewer 2 scored the content a 5 and stated, "standard is covered completely; all properties are defined and practiced throughout the lesson." Reviewer 1, on the other hand, stated that Clarification 1 (Associative, Commutative, Distributive applied to generating equivalent algebraic expressions) is "not represented".</p> <p>HMH Response: In the lesson interleaf for Lesson 8.4 on page 261A, the Associative Property of Addition, Associative Property of Multiplication, Commutative Property of Addition, Commutative Property of Multiplication, and Distributive Property are all listed as review vocabulary. These properties are all defined, with examples, in a table on SE page 262. Additionally, tasks 2 and 3 on pages 262-263 of the SE require students to list the property used in each step of simplifying an expression. On Your Own problems 3, 6, 14, 15, and 19 on pages 264-265, More Practice/Homework problems 6 and 7 on page 267, and Florida Test Prep problem 10 require students to justify their work using properties.</p> | <p>Lesson 8.4, p.262<br/> <a href="https://www.jmhco.com/FL_SE_M08_Numericalc50d-11ec-b2c9-4d07eb9">https://www.jmhco.com/FL_SE_M08_Numericalc50d-11ec-b2c9-4d07eb9</a></p>                                                                                                                                                                                                                                                                                                                                                                                                   |
| 5 | <p>MA.6.AR.1.4</p> <p>Apply the properties of operations to generate equivalent algebraic expressions with integer coefficients.</p>                                   | n/a                                   | <p>Reviewer 1 stated that this standard was not represented because set notation was not used.</p> <p>HMH Response: Set notation is not a requirement of the benchmark, shown in the example, or mentioned in the clarification. Integers are used in the language of the benchmark.</p> <p><b>Equations</b> - On page 284, Task 4 parts E and F use substitution for a single value. Check Understanding problems 2-4 on page 284 use substitution for a single value. On Your Own problems 10-15 on page 285 have students substitute multiple values. On Your Own problems 16-17 on page 286 have students substitute multiple values. More Practice/Homework problems 7-10 on page 287 have students substitute for a single value. Page 285 problem 11 is the only one involving rational numbers and not just integers. Lessons 9.2 and 9.3 have students use what they learned in lesson 9.1 to check their solutions to equations.</p> <p><b>Inequalities</b> - Lesson 10.1 (pages 322-325 and 327) covers the benchmark for inequalities.</p>                             | <p>Lesson 9.1, pp. 284-288<br/> <a href="https://www.jmhco.com/FL_SE_M09_Solve_Pro11ec-8e6f-ab8d0d29724">https://www.jmhco.com/FL_SE_M09_Solve_Pro11ec-8e6f-ab8d0d29724</a><br/>                     Lessons 9.2-9.3, pp. 285-288<br/> <a href="https://www.jmhco.com/FL_SE_M09_Solve_Pro11ec-8e6f-ab8d0d29724">https://www.jmhco.com/FL_SE_M09_Solve_Pro11ec-8e6f-ab8d0d29724</a><br/>                     Lesson 10.1, pp. 322-327<br/> <a href="https://www.jmhco.com/FL_SE_M10_Inequalities41d7a4ec30a4">https://www.jmhco.com/FL_SE_M10_Inequalities41d7a4ec30a4</a></p> |
| 6 | <p>MA.6.AR.2.1</p> <p>Given an equation or inequality and a specified set of integer values, determine which values make the equation or inequality true or false.</p> | n/a                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| A                                                                                                                                                                                                                                          | B          | C                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | D                                                                                                                                                                                     | E |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| <p>MA.6.DP.1.4<br/>Given a histogram or line plot within a real-world context, qualitatively describe and interpret the spread and distribution of the data, including any symmetry, skewness, gaps, clusters, outliers and the range.</p> | <p>n/a</p> | <p>Reviewer 1 stated that "instruction limited to skewed description . . . and does not focus on describing data as Normal or Bimodal."<br/><br/>HMH Response: Instruction does not focus on describing data as Normal or Bimodal. The benchmark does not mention Bimodal or Normal. The clarification (Appendix C) does not contain Bimodal or Normal in the glossary. We fully cover the benchmark in lessons 19.1 (pages 621-628) and 19.4 (pages 643-648).</p>                                                                                                                                                        | <p>Lesson 19.1, pp. 621-628<br/><a href="https://www.jmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11">https://www.jmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11</a></p> |   |
| <p>MA.6.NSO.1.3<br/>Given a mathematical or real-world context, interpret the absolute value of a number as the distance from zero on a number line. Find the absolute value of rational numbers.</p>                                      | <p>n/a</p> | <p>Reviewer 2 stated that "lessons needs various number lines . . . and more practice with absolute value of rational numbers."<br/><br/>HMH Response: Lesson 1.3 contains three horizontal number lines (pages 19, 20, and 21) and two vertical number lines (pages 20 and 22). Students explicitly find the absolute value of a number eight times in the tasks on pages 20 and 21 and eight practice problems on pages 22 and 23. Students must find absolute value in the process of solving other problems in the tasks and practice problems. The benchmark and clarifications are fully covered in lesson 1.3.</p> | <p>Lesson 1.1, pp. 3-10, L<br/><a href="https://www.jmhco.com/FL_SE_M01_Rational_N8e6f-039c40batf052">https://www.jmhco.com/FL_SE_M01_Rational_N8e6f-039c40batf052</a></p>            |   |

| F                                                                                                                                                                                     | G                                                                                                                                                                                                                 | H                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>28. Lesson 19.4, pp. 643-648<br/> <a href="#">content/math/intro_math_fl/g6_7/student/pdf/ACC6_IntroMath_EN_and_Data_Distribution.pdf?custom_correlation_id=8912d428-c5ce-</a></p> | <p>Left skewed and right skewed not expectations of benchmark. Within BIG-M states that describing data focuses on using normal, skewed and bimodal.</p>                                                          | <p>The benchmark MA.6.DP.1.4 reads as follows:<br/> Given a histogram or line plot within a real-world context, qualitatively describe and interpret the spread and distribution of the data, including any symmetry, skewness, gaps, clusters, outliers and the range.<br/> The clarification for the benchmark reads as follows:<br/> Refer to K-12 Mathematics Glossary (Appendix C).<br/> We fully cover the benchmark and clarification in the lessons listed in columns D–F (Lessons 19.1 and 19.4).<br/> Skewed distributions, which the benchmark references, are discussed on page 623. Although there is no mention of normal or bimodal distributions in the benchmark or in the glossary in Appendix C, teachers have the opportunity to discuss normal distributions when introducing symmetric distributions in Task 2 on page 623, and distributions that are approximately normal also appear in Task 3 on page 624, Problem 6 on page 626, and Problem 6 on page 648. Similarly, teachers may choose to discuss bimodal distributions in Problem 6 on page 628.</p> |
| <p>Lesson 1.3, pp.19-24<br/> <a href="#">content/math/intro_math_fl/g6_7/student/pdf/ACC6_IntroMath_EN_number_Concepts.pdf?custom_correlation_id=3f600eae-c5cd-11ec-</a></p>          | <p>Problems focus more integer values whereas the benchmark expectation is rational numbers. Additionally, practice problems lack use of a number line however students can use one in determining solutions.</p> | <p>The benchmark is fully covered in the lessons listed in columns D–F and elsewhere in the course. With respect to the note in column G, students find the absolute value of rational numbers that are not integers in the following places:</p> <ul style="list-style-type: none"> <li>• p. 6, Task 4 Part E and Check Understanding Problems 7 and 9</li> <li>• p. 8, Problems 23–25</li> <li>• p. 9, Problems 7 and 8</li> <li>• p. 16, Problem 5</li> <li>• p. 39, Problems 6 and 8</li> <li>• p. 50, Problems 15 and 16</li> <li>• p. 193, Task 3</li> <li>• p. 448, Task 3</li> </ul> <p>We agree with the note in column G that, using the instruction we provide, students can choose to use number lines to find absolute values when solving practice problems. Instruction on using number lines to find absolute values is provided on page 6.</p>                                                                                                                                                                                                                      |

|                                                                                                                                             |  |

**Attachment(s):** "HMH FL Go Math Appeal G1\_5.12.xlsx", "HMH FL Go Math Appeal G5\_5.12.xlsx", "image001.png", "image008.png", "image009.jpg", "image010.png", "image011.jpg"

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

HMH - Appeal call  
Thu, May 12, 2022 1:00 PM - 1:30 PM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

<https://meet.goto.com/305173301>

**You can also dial in using your phone.**

United States (Toll Free): [1 877 309 2073](tel:18773092073)

United States: [+1 \(646\) 749-3129](tel:+16467493129)

**Access Code:** 305-173-301

**Join from a video-conferencing room or system.**

Dial in or type: 67.217.95.2 or [inroomlink.goto.com](https://inroomlink.goto.com)

Meeting ID: 305 173 301

Or dial directly: [305173301@67.217.95.2](tel:305173301@67.217.95.2) or [67.217.95.2##305173301](tel:67.217.95.2##305173301)

Get the app now and be ready when your first meeting starts: <https://meet.goto.com/install>

Thank you,

Amber Baumbach

Hi Tavi,

Please make the changes in your digital platform. Once we can see that they've been made we can seek leadership approval.

Thanks!

**Subject:** RE: HMH initial appeal call

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?

For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

This message originated from outside your organization

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal

| 4 |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                          |                                                |
| 5 | <p>MA.1.AR.2.2 Clarification 2: Problem types are limited to an equation with no more than four terms. For questions on pages 480 and 481 there are 5 terms instead of 4. There is not a focus on the meaning of the equal sign within the lesson the evidence provided within the Math Talk does not guarantee that every teacher will realize that is the focus of the lesson and not a supplemental piece.</p> | <p>Pages in Lesson 10.8 have been updated to reflect corrections. The 5-term equation is removed. Model and Draw on the upper half of p.478 has been updated to emphasize the meaning of the equal sign. These changes will appear in the digital program immediately and upon reprint of the books.</p> <p>Lesson 10.8: p.478, p.480</p> | <p><a href="https://hnhco.box.com/s/hbhmnhms27gox3vweviiukavykylg">https://hnhco.box.com/s/hbhmnhms27gox3vweviiukavykylg</a></p>         | Lesson aligns to benchmark                     |
| 6 | <p>Lesson does align to the benchmark, however DP.1.1 was identifies while DP1.2 is listed in the teacher edition. Additionally, question 14 on page is 676 is not clear, instead of having students recreate the total using tally marks, the number should be presented for students recognize the connection.</p>                                                                                              | <p>Lesson 16.3 aligns as stated by curriculum specialist: p. 676 corrected. This change will appear in the digital program immediately and upon reprint of the books.</p> <p>Lesson 16.3: p.676</p>                                                                                                                                       | <p><a href="https://hnhco.box.com/s/akkuftqthf2apb300068i10gzsiakwnbi">https://hnhco.box.com/s/akkuftqthf2apb300068i10gzsiakwnbi</a></p> | Lesson aligns to benchmark                     |

| 8 | There are limited opportunities for students to create the own drawings and sketches within the lessons. In lesson 11.5, stuents can draw the sahep indentifies instead of circling.                                                                                                         | Students draw shapes in Lesson 12.2 p.539 given that attributes "curved" and straight"; on p.540, students draw hexagons, rectangles, squares, and triangles, naming the quantity of the attributes (number of sides and vertices.)<br><br>Lesson 12.2: pp. 539, 540                                                                                                                                                                                                                                                 | <a href="https://hmhco.box.com/s/4dr84tb8k0dbrtviwemlc73w9otv545n">https://hmhco.box.com/s/4dr84tb8k0dbrtviwemlc73w9otv545n</a> | Lesson aligns to benchmark |
| 9 | The expectation of the benchmark is not to compose 2 quarter circles to make a semi-circle. Benchmark language for figures used should be incorporated within the lesson (semi-circle, triangles, rectangles, squares, trapezoids, hexagons, cubes, rectangular prims, cones and cylinders). | Pages in the following lessons have been updated to reflect corrections: In Lesson 12.3 and Lesson 12.4, students compose new shapes using triangles, rectangles, and trapezoids with pattern blocks and by drawing. In Lesson 12.3, the focus is on spatial relationships relating to part-whole and counting the number of parts used per Clarification 1. These changes will appear in the digital program immediately and upon reprint of the books.<br><br>Lesson 12.3: pp. 545-548<br>Lesson 12.4: pp. 551-554 | <a href="https://hmhco.box.com/s/tauo5iv2ablk8ifd0k9x8yctbx4f7gbd">https://hmhco.box.com/s/tauo5iv2ablk8ifd0k9x8yctbx4f7gbd</a> | Lesson aligns to benchmark |

|    | A                                                                                                                                                                                                                                                                                           | B   | C                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | D | E | F                                                                                                                                                                                                                                                                                                                                                                                           | G | H |

| 10 | <p>MA.1.GR.1.4<br/>Given a real-world object, identify parts that are modeled by two- and three-dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares and hexagons, spheres, and rectangular prisms, cubes, rectangular prisms, cones and cylinders.</p> | n/a | <p>Reviewer 1 states that "While there are many examples of real-world objects for stand alone figures (balls, cones, cans, etc.), there are only a few real-world examples of items with multiple identifiable geometric figures. . . . In most other examples, they are identifying the geometric figures in composed shapes."<br/>HMH Response: The composite figures were included; however because of their age appropriateness for Grade 1 students. The approach also meets the standard as it is written.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |   | <p>Lesson 11.2, p. 503 Combine Three-Dimensional Shapes<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C11_Geometry_Three">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C11_Geometry_Three</a><br/>e-<br/>Dimensional_Solids.pdf?custom_correlation_id=9ab7c363-029b-41e0-9e51-8919a6384f6b</p>                  |   |   |
| 11 | <p>MA.1.M.1.1<br/>Estimate the length of an object to the nearest inch. Measure the length of an object to the nearest inch or centimeter.</p>                                                                                                                                              | n/a | <p>Reviewer 1 gave us a positive score of 5--a difference of 3 points from Reviewer 2. This reviewer specifically said "Items align to the standard for estimation."<br/>Reviewer 2, on the other hand, states that "The clarifications were clear that students would be estimating with inches. Chapter 14 Lesson 3 focuses on estimating with centimeters."<br/>HMH Response: The standard is written as follows "Measure the length of an object to the nearest inch or centimeter" so the content as presented meets the standards as they are written.<br/>Additionally, reviewer 2 was concerned that non-standard units are used for estimating.<br/>HMH Response: The tiles and cubes used for measurement are not non-standard units of measure; the tiles are specified to be 1-inch and the unit cubes are 1 cm; this builds an understanding of the connection between counting and then adding units to measurement. Given how this benchmark and the clarifications, we believe this standard is completely met.</p> |   |   | <p>Lessons 14.1, 14.2, 14.3, 14.4, pp.595-616<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25</a></p> |   |   |
| 12 | <p>MA.1.M.1.2<br/>Compare and order the length of up to three objects using direct and indirect comparison.</p>                                                                                                                                                                             | n/a | <p>Reviewer 1 gave us a positive score of 5 (a disparity of 3 points with reviewer 2) and stated "Opportunities for 3 items compared directly and also for indirect comparison."<br/>Reviewer 2, on the other hand, states that "Chapter 14 Lesson 3 does not align as it discusses estimating measurement instead of comparing objects in specific units."<br/>HMH Response: Students use comparisons of longer or shorter objects so that they can estimate their lengths. More specifically, in 14.5 students compare objects to order them, as stated by the standard.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |   | <p>Lesson 14.3, p. 607, Lesson 14.5, p. 609<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=c34a30c2-3daf-495e-b88e-d8b01a31a7e40">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=c34a30c2-3daf-495e-b88e-d8b01a31a7e40</a></p> |   |   |
| 13 | <p>MA.1.M.2.1<br/>Using analog and digital clocks, tell and write time in hours and half-hours.</p>                                                                                                                                                                                         | n/a | <p>Reviewer 2 states that "there is no discussion or use of the vocabulary for digital and analog" within the lessons 15.1-15.4.<br/>HMH Response: The benchmark specifies only that students write and tell time and not that they use specified vocabulary. Clocks divided into semicircles is shown in Lesson 15.3.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |   | <p>Lessons 15.1-15.5, pp.631-652<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b88e-d8b01a31a7e40">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b88e-d8b01a31a7e40</a></p>                          |   |   |

| 9  | <p>MA.5.FR.2.3</p> <p>When multiplying a given number by a fraction less than 1 or a fraction greater than 1, predict and explain the relative size of the product to the given number without calculating.</p> | n/a | <p>Reviewer 2 states that "Examples in the text call for completing an operation to figure out the relative comparison. The BEST standards state that students should be able to focus on estimation and assessing the reasonableness of answers."</p> <p>HMH Response: Students learn estimation and assessing the reasonableness of answers by comparing products using the whole number part of the mixed number. In Lessons 10.3 and 10.4, students use models to compare the size of the product to the size of a factor when multiplying fractions. Students then determine that when you find a part of a part, the product will be less than either part. Finally, students understand that when a fraction is multiplied by a number greater than 1, the product will always be greater than the fraction. Building reasoning about the size of a product will help students determine if their solutions are reasonable or help them make reasonable estimates.</p> | Lessons 10.3 and 10.4<br><a href="https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5">https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5</a> |   |
| 10 | <p>MA.5.GR.1.1</p> <p>Classify triangles or quadrilaterals into different categories based on shared defining attributes. Explain why a triangle or quadrilateral would or would not belong to a category.</p>  | n/a | <p>Reviewer 1 stated this benchmark coverage 2 points higher, noting "lots of practice with triangles and quadrilaterals."</p> <p>Reviewer 2, on the other hand, states that "Examples classify more than what is necessary. Addresses various polygons not addressed in the BEST standards."</p> <p>HMH Response: Polygons shown are review material, and are also used in 3D prisms; such as the right pentagonal prism on p.491.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Lesson 14.4, p. 491<br><a href="https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5">https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5</a>   |   |

| <p>/content/math/go_math/g5/student/pdf/G5_GoMath_EN_FL_SEns.pdf?custom_correlation_id=a541362b-c5cb-11ec-866f-</p> | <p>Link and information provided do not address benchmark.</p> | <p>In Lesson 14.1, twenty and Classify Two-Dimensional Figures, students classify triangles as scalene, isosceles, equilateral, acute, obtuse and right by sides and angles. This lesson also includes the classification of quadrilaterals by defining attributes, including parallelograms, rhombi, rectangles, squares and trapezoids. Problem 12 on p. 476 and Problem 6 on p.477 have students use diagrams to show why quadrilaterals belong or do not belong to a category. In Lesson 14.2, Classify Triangles, students continue to classify as scalene, isosceles, equilateral, acute, obtuse and right triangles. Students explain why an equilateral triangle is also a regular polygon on p. 479 and explain why they cannot draw a right equilateral triangle on p. 480. Problem 6 on p. 481 has students identifying and explaining which triangle does not belong. In, Lesson 14.3, Classify Quadrilaterals, students use attributes to classify and compare parallelograms, rhombi, rectangles, squares, and trapezoids. Students explain how trapezoids and parallelograms are different on p. 485. They use a</p> | <p><a href="https://hmhco.box.com/s/ufj102znmw992ds0qd2wnu5qfvg9puca">https://hmhco.box.com/s/ufj102znmw992ds0qd2wnu5qfvg9puca</a></p> |

| <p>MA.5.GR.4.1<br/>Identify the origin and axes in the coordinate system. Plot and label ordered pairs in the first quadrant of the coordinate plane.</p>                             | n/a | <p>Reviewer 1 states that in Lesson 17.3, p.591, students write the ordered pairs to find the rule.<br/>HMH Response: This is also an example of using standards together and not in isolation. (with 5.GR.4.1 and 5.GR.4.2)<br/>Reviewer 2 rated this benchmark coverage 2 points higher with a 4, notes "Materials fairly instruct how to plot and label points ."</p> | Lesson 17.3 p. 591<br><a href="https://www.jmhco.com/C17_Graphs_and_Pat_a7d422cc62c4">https://www.jmhco.com/C17_Graphs_and_Pat_a7d422cc62c4</a>                                                                                                                                                                                                                                                                                                                              |   |
| <p>MA.5.M.1.1<br/>Solve multi-step real-world problems that involve converting measurement units to equivalent measurements within a single system of measurement.</p>                | n/a | <p>Reviewer 2 states: Conversion included length, volume, and capacity; however, there were no time conversion present."<br/>HMH Response: One simple time conversions is included in 16.3, p.563, but this absence was noted in the errata process and will be corrected on the next printing.</p>                                                                      | Lesson 16.3. p.563<br><a href="https://www.jmhco.com/C16_Convert_Units_of_af64af7b386ad2">https://www.jmhco.com/C16_Convert_Units_of_af64af7b386ad2</a>                                                                                                                                                                                                                                                                                                                      |   |
| <p>MA.5.NSO.1.1<br/>Express how the value of a digit in a multi-digit number with decimals to the thousandths changes if the digit moves one or more places to the left or right.</p> | n/a | <p>Reviewer 1 stated that there is "not enough attention to this standard, only addressed in one lesson."<br/>HMH Response: More examples exist with other standards, as shown in Lesson 3.1, p. 83, Lesson 5.1, p. 149 and Lesson 7.1 p. 219</p>                                                                                                                        | Lesson 3.1, p. 83<br><a href="https://www.jmhco.com/C03_Place_Value_and_95a2dd181d23">https://www.jmhco.com/C03_Place_Value_and_95a2dd181d23</a><br>Lesson 5.1, p.149<br><a href="https://www.jmhco.com/C05_Multiply_Decimal_c5cb-11ec-b70b-714ac8">https://www.jmhco.com/C05_Multiply_Decimal_c5cb-11ec-b70b-714ac8</a><br>Lesson 7.1, p.219<br><a href="https://www.jmhco.com/C07_Divide_Decimal_d7c7d6dd61c1d">https://www.jmhco.com/C07_Divide_Decimal_d7c7d6dd61c1d</a> |   |

| 13 | /content/math/go_math/g5/student/pdf/G5_GoMath_EN_FL_SE_errs.pdf?custom_correlation_id=0b4f9e24-c5cb-11ec-b420-        | It is not the expectation of the benchmarks identified for students to write a rule to describe a relationship. | Lesson 17.3 focuses on the connection of the number line to the x-axis and y-axis and the first number in the ordered pair as the input and the second number as the output. In Lesson 17.4, Students extend their knowledge of rules and patterns acquired in earlier lessons correlating to 5.AR.3.1 and 5.AR.3.2 to plot and label whole-number ordered pairs in the first quadrant of the coordinate plane on pages 597, 598, 599, and 601. Problem 8 on p.600 and Problem 5, on p.602 have students using two-column tables to identify coordinates for a coordinate plane. Lesson 17.5, focuses on identifying whole-number ordered pairs and plotting points with connection of the number line to the x-axis and y-axis. Students use their understanding of inputs and outputs to explain why an ordered pair is incorrect in Problem 28 on p. 606. In Lesson 17.6, students use a two-column table to organize data collected in an experiment and then display the data on a coordinate plane. Students write and plot the points for each ordered pair. | <a href="https://nhhco.box.com/s/2afcepb74ujul9n2rq3dlia46vc09">https://nhhco.box.com/s/2afcepb74ujul9n2rq3dlia46vc09</a>           |

Hello everyone,

Thank you for speaking with us this morning. Please see the attached appeal template.

Please let me know if you have any questions or concerns along the way,  
Lauren

This message originated from outside your organization

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMM has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal  
Tue, Apr 26, 2022 11:00 AM - 11:30 AM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

**This message originated from outside your organization**

Hi Lisa,

Grade 5 has been approved by our content specialist J

In Grade 1, the clarification of MA.1.M.2.2 states, "Clarification 1: Instruction includes the recognition of both sides of a coin."

Would it be possible to place the back side (or "tails") of a quarter next to the existing quarter here to satisfy that clarification?

This is on pg. 414.

Once we have this standard cleared we are good to route grades 1 and 5 for approval.

Thank you,  
Amber Baumbach

Hello Amber! Pardon my delay in responding, but both Tavi and I were out of the office today, but in checking my email this afternoon, I saw yours. Thank you, thank you!

Attached are the final changes/responses for Grades 1 and 5. If you need anything further from us, please don't hesitate to let us know

Thank you again, and have a wonderful weekend!

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

HMH - Appeal call  
Thu, May 12, 2022 1:00 PM - 1:30 PM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?  
For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?

For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

cid:image005.png@01D865EB.D85AAA10

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMM has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?  
For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

**Subject:** HMM initial appeal call

This message originated from outside your organization

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal  
Tue, Apr 26, 2022 11:00 AM - 11:30 AM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

Nonetheless, we have provided responses to any standards where at least one reviewer scored us a 3 or below.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |   | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |   |
| 5 | <p>MA.1.AR.2.2</p> <p>Determine and explain if equations involving addition or subtraction are true or false.</p>  | n/a                                   | <p>Reviewer 1 rates us a 5 here and indicates that "Items focus on true and false. There is a mix of operations being related on both sides of the question as well as opportunities for multiple addends."</p> <p>Reviewer 2s, on the other hand, states that there were too many terms in the equations. They indicated that "The Listen and Draw on p.477, #13 on p.480, and #7 on 481 contain 5 terms, which does not align to the standard and clarifications."</p> <p>HMH Response: There are no more than 3 terms used on one side of an equation. On p. 477; p. 480 and 481 each have only a single equation that shows two terms on one side of the equation and three terms on the other.</p> <p>Additionally, Reviewer 2 wrote that the lesson does "not focus on the meaning of the equal sign."</p> <p>HMH Response: The Math Talk on p. 477 addresses the meaning of the equal sign.</p> |   |   | <p>Lesson 10.8, pp. 477-481 Equal and Not Equal, focuses on True/False and operations on both sides of the equation.</p> <p><a href="https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C10_Addition_and_Subtraction_Relationships.pdf?custom_correlation_id=d905db34-6ce4-44e1-9b5e-235f2ff145f0">https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C10_Addition_and_Subtraction_Relationships.pdf?custom_correlation_id=d905db34-6ce4-44e1-9b5e-235f2ff145f0</a></p> |   |   |
| 6 | <p>MA.1.DP.1.1</p> <p>Collect data into categories and represent the results using tally marks or pictographs.</p> | n/a                                   | <p>Reviewer 2 writes that Clarification 1 calls for students to use "tally marks to skip counting by 5's."</p> <p>HMH Response: Clarification 1 states that students should <u>connect</u> tally marks to counting by 5s, but does not state the expectation that students should skip count tally marks.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |   | <p>Lesson 16.3, pp. 673-678 Tally Marks</p> <p>Lesson 16.4, pp.679-685 Make Tally Marks</p> <p><a href="https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C16_Graphing.pdf?custom_correlation_id=f6e6549e-4187-4701-822a-a44b3d09850e">https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C16_Graphing.pdf?custom_correlation_id=f6e6549e-4187-4701-822a-a44b3d09850e</a></p>                                                                                          |   |   |

| 4 |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                          |                                                |
| 5 | <p>MA.1.AR.2.2 Clarification 2: Problem types are limited to an equation with no more than four terms. For questions on pages 480 and 481 there are 5 terms instead of 4. There is not a focus on the meaning of the equal sign within the lesson the evidence provided within the Math Talk does not guarantee that every teacher will realize that is the focus of the lesson and not a supplemental piece.</p> | <p>Pages in Lesson 10.8 have been updated to reflect corrections. The 5-term equation is removed. Model and Draw on the upper half of p.478 has been updated to emphasize the meaning of the equal sign. These changes will appear in the digital program immediately and upon reprint of the books.</p> <p>Lesson 10.8: p.478, p.480</p> | <p><a href="https://hnhco.box.com/s/hbhmnhms27gox3vweviiukavykylg">https://hnhco.box.com/s/hbhmnhms27gox3vweviiukavykylg</a></p>         | Lesson aligns to benchmark                     |
| 6 | <p>Lesson does align to the benchmark, however DP.1.1 was identifies while DP1.2 is listed in the teacher edition. Additionally, question 14 on page is 676 is not clear, instead of having students recreate the total using tally marks, the number should be presented for students recognize the connection.</p>                                                                                              | <p>Lesson 16.3 aligns as stated by curriculum specialist: p. 676 corrected. This change will appear in the digital program immediately and upon reprint of the books.</p> <p>Lesson 16.3: p.676</p>                                                                                                                                       | <p><a href="https://hnhco.box.com/s/akkuftqthf2apb300068i10gzsiakwnbi">https://hnhco.box.com/s/akkuftqthf2apb300068i10gzsiakwnbi</a></p> | Lesson aligns to benchmark                     |

| 8 | There are limited opportunities for students to create the own drawings and sketches within the lessons. In lesson 11.5, stuents can draw the sahep indentifies instead of circling.                                                                                                         | Students draw shapes in Lesson 12.2 p.539 given that attributes "curved" and straight"; on p.540, students draw hexagons, rectangles, squares, and triangles, naming the quantity of the attributes (number of sides and vertices.)<br><br>Lesson 12.2: pp. 539, 540                                                                                                                                                                                                                                                 | <a href="https://hmhco.box.com/s/4dr84fb8k0dbrtviwemlc73w9oiv545n">https://hmhco.box.com/s/4dr84fb8k0dbrtviwemlc73w9oiv545n</a> | Lesson aligns to benchmark |
| 9 | The expectation of the benchmark is not to compose 2 quarter circles to make a semi-circle. Benchmark language for figures used should be incorporated within the lesson (semi-circle, triangles, rectangles, squares, trapezoids, hexagons, cubes, rectangular prims, cones and cylinders). | Pages in the following lessons have been updated to reflect corrections: In Lesson 12.3 and Lesson 12.4, students compose new shapes using triangles, rectangles, and trapezoids with pattern blocks and by drawing. In Lesson 12.3, the focus is on spatial relationships relating to part-whole and counting the number of parts used per Clarification 1. These changes will appear in the digital program immediately and upon reprint of the books.<br><br>Lesson 12.3: pp. 545-548<br>Lesson 12.4: pp. 551-554 | <a href="https://hmhco.box.com/s/tauo5iv2ablk8ifd0k9x8yctbx4f7gbd">https://hmhco.box.com/s/tauo5iv2ablk8ifd0k9x8yctbx4f7gbd</a> | Lesson aligns to benchmark |

| 10 | <p>MA.1.GR.1.4<br/>Given a real-world object, identify parts that are modeled by two- and three-dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares and hexagons, spheres, cubes, rectangular prisms, cones and cylinders.</p> | n/a | <p>Reviewer 1 states that "While there are many examples of real-world objects for stand alone figures (balls, cones, cans, etc.), there are only a few real-world examples of items with multiple identifiable geometric figures. . . . In most other examples, they are identifying the geometric figures in composed shapes."</p> <p>HMH Response: The composite figures were included; however because of their age appropriateness for Grade 1 students. The approach also meets the standard as it is written.</p>                                                             |   | <p>Reviewer 1 gave us a positive score of 5--a difference of 3 points from Reviewer 2. This reviewer specifically said "Items align to the standard for estimation."</p> <p>Reviewer 2, on the other hand, states that "The clarifications were clear that students would be estimating with inches. Chapter 14 Lesson 3 focuses on estimating with centimeters."</p> <p>HMH Response: The standard is written as follows "Measure the length of an object to the nearest inch or centimeter" so the content as presented meets the standards as they are written. Additionally, reviewer 2 was concerned that non-standard units are used for estimating.</p> <p>HMH Response: The tiles and cubes used for measurement are not non-standard units of measure; the tiles are specified to be 1-inch and the unit cubes are 1 cm; this builds an understanding of the connection between counting and then adding units to measurement. Given how this benchmark and the clarifications, we believe this standard is completely met.</p> | <p>Lesson 11.2, p. 503 Combine Three-Dimensional Shapes<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C11_Geometry_Three">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C11_Geometry_Three</a></p> <p>Dimensional_Solids.pdf?custom_correlation_id=9ab7c363-029b-41e0-9e51-8919a6384f6b</p>                    |   |   |
| 11 | <p>MA.1.M.1.1<br/>Estimate the length of an object to the nearest inch. Measure the length of an object to the nearest inch or centimeter.</p>                                                                                                                      | n/a | <p>Reviewer 1 gave us a positive score of 5 (a disparity of 3 points with reviewer 2) and stated "Opportunities for 3 items compared directly and also for indirect comparison."</p> <p>Reviewer 2, on the other hand, states that "Chapter 14 Lesson 3 does not align as it discusses estimating measurement instead of comparing objects in specific units."</p> <p>HMH Response: Students use comparisons of longer or shorter objects so that they can estimate their lengths. More specifically, in 14.5 students compare objects to order them, as stated by the standard.</p> |   | <p>Lesson 14.1, 14.2, 14.3, 14.4, pp.595-616<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Lesson 14.3, p. 607, Lesson 14.5, p. 609<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25</a></p> |   |   |
| 12 | <p>MA.1.M.1.2<br/>Compare and order the length of up to three objects using direct and indirect comparison.</p>                                                                                                                                                     | n/a | <p>Reviewer 2 states that "there is no discussion or use of the vocabulary for digital and analog" within the lessons 15.1-15.4.</p> <p>HMH Response: The benchmark specifies only that students write and tell time and not that they use specified vocabulary. Clocks divided into semicircles is shown in Lesson 15.3.</p>                                                                                                                                                                                                                                                        |   | <p>Lesson 15.1-15.5, pp.631-652<br/><a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b8ed-8b01a31a7e40">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMa1h_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b8ed-8b01a31a7e40</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                           |   |   |

| 14 | <p>Clarificatin 1 of the benchmark states: Instruction includes the recognition of both sides of a coin. The lesson is lacking in stating how many of each coin equal a dollar.</p>                | <p>Both sides of the coins are shown throughout, particularly in Lesson 9.1 when showing coins, pp. 304-396. In Lesson 9.4, Equal Amounts, however, a question has been amended for student to find the number of each coin that makes one dollar. This change will appear in the digital program immediately and upon reprint of the books.</p> <p>Lesson 9.1: pp. 394-396<br/>Lesson 9.4: p. 412</p> | <p><a href="https://hmhco.box.com/s/ti0bsjk33bhp07bvp1k6a48r77jbnit8r">https://hmhco.box.com/s/ti0bsjk33bhp07bvp1k6a48r77jbnit8r</a></p> | <p>Lacking a visual reference to quarters</p> |
| 15 | <p><b>Lesson aligns to the benchmark.</b></p>                                                                                                                                                      | <p>Lesson aligns.</p>                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                          |                                               |
| 16 | <p>Examples provided in the lesson are aligned to MA.1.NSO.1.3. Students are not given examples of expanded form in this lesson based on the benchmark expectation.</p>                            | <p>Lesson 2.1 shows multiple uses of expanded form and word form. Lessons 2.2 and 2.3 includes reading word forms of numbers.</p> <p>Lesson 2.1: pp. 50-52 expanded form<br/>Lesson 2.9: pp. 98-99</p>                                                                                                                                                                                                 | <p><a href="https://hmhco.box.com/s/oadd4tr8uzeoqsbq5wmr95thgo3oimj4">https://hmhco.box.com/s/oadd4tr8uzeoqsbq5wmr95thgo3oimj4</a></p>   | <p>Lesson aligns to benchmark</p>             |
| 17 | <p>Instruction of this benchmark should allow students to explore more examples of adding 2 digit and 1 digit numbers, in addition to combining ones and tens as mentioned in clarification 1.</p> | <p>In Lesson 6.10, students explore many examples of 2-digit plus 1-digit addition, including making a new 10 from ones.</p> <p>Lesson 6.10: pp. 303-306</p>                                                                                                                                                                                                                                           | <p><a href="https://hmhco.box.com/s/rtt8isixms6xb27">https://hmhco.box.com/s/rtt8isixms6xb27</a></p>                                     | <p>Lesson aligns to benchmark</p>             |
| 18 |                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                          |                                               |

| <p>MA.5.FR.2.3</p> <p>When multiplying a given number by a fraction less than 1 or a fraction greater than 1, predict and explain the relative size of the product to the given number without calculating.</p> | n/a | <p>Reviewer 2 states that "Examples in the text call for completing an operation to figure out the relative comparison. The BEST standards state that students should be able to focus on estimation and assessing the reasonableness of answers."</p> <p>HMH Response: Students learn estimation and assessing the reasonableness of answers by comparing products using the whole number part of the mixed number. In Lessons 10.3 and 10.4, students use models to compare the size of the product to the size of a factor when multiplying fractions. Students then determine that when you find a part of a part, the product will be less than either part. Finally, students understand that when a fraction is multiplied by a number greater than 1, the product will always be greater than the fraction. Building reasoning about the size of a product will help students determine if their solutions are reasonable or help them make reasonable estimates.</p> | <p>Lessons 10.3 and 10.4<br/> <a href="https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5">https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5</a></p> |   |
| <p>MA.5.GR.1.1</p> <p>Classify triangles or quadrilaterals into different categories based on shared defining attributes. Explain why a triangle or quadrilateral would or would not belong to a category.</p>  | n/a | <p>Reviewer 1 stated this benchmark coverage 2 points higher, noting "lots of practice with triangles and quadrilaterals."</p> <p>Reviewer 2, on the other hand, states that "Examples classify more than what is necessary. Addresses various polygons not addressed in the BEST standards."</p> <p>HMH Response: Polygons shown are review material, and are also used in 3D prisms; such as the right pentagonal prism on p.491.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Lesson 14.4, p. 491<br/> <a href="https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5">https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5</a></p>   |   |

This lesson also includes the classification of quadrilaterals by defining attributes, including parallelograms, rhombi, rectangles, squares and trapezoids. Problem 12 on p. 476 and Problem 6 on p.477 have students use diagrams to show why quadrilaterals belong or do not belong to a category. In Lesson 14.2, Classify Triangles, students continue to classify as scalene, isosceles, equilateral, acute, obtuse and right triangles. Students explain why an equilateral triangle is also a regular polygon on p. 479 and explain why they cannot draw a right equilateral triangle on p. 480. Problem 6 on p. 481 has students identifying and explaining which triangle does not belong. In, Lesson 14.3, Classify Quadrilaterals, students use attributes to classify and compare parallelograms, rhombi, rectangles, squares, and trapezoids. Students explain how trapezoids and parallelograms are different on p. 485. They use a</p> | <p><a href="https://hmhco.box.com/s/u1p102zmw992ds0qd2wnu5qfvg9puca">https://hmhco.box.com/s/u1p102zmw992ds0qd2wnu5qfvg9puca</a></p> |

In Lesson 17.4, Students extend their knowledge of rules and patterns acquired in earlier lessons correlating to 5.AR.3.1 and 5.AR.3.2 to plot and label whole-number ordered pairs in the first quadrant of the coordinate plane on pages 597, 598, 599, and 601. Problem 8 on p.600 and Problem 5, on p.602 have students using two-column tables to identify coordinates for a coordinate plane. Lesson 17.5, focuses on identifying whole-number ordered pairs and plotting points with connection of the number line to the x-axis and y-axis. Students use their understanding of inputs and outputs to explain why an ordered pair is incorrect in Problem 28 on p. 606. In Lesson 17.6, students use a two-column table to organize data collected in an experiment and then display the data on a coordinate plane. Students write and plot the points for each ordered pair. | <a href="https://nhhco.box.com/s/2afccp1b74ujul9n2rq3dlia46vc09">https://nhhco.box.com/s/2afccp1b74ujul9n2rq3dlia46vc09</a>         |

Evidence provided does not met benchmark expectations.</p> | <p>Students have multiplied multi-digit numbers in Grade 4, so in Lesson 1.1, students extend and apply that knowledge. Students estimate and then find the product of multi-digit whole numbers. Problems 3–33 do not specify that students must use a standard algorithm to find the product. Students have learned various methods in previous grades and can apply the method of choice while multiplying multi-digit numbers in Grade 5.<br/> Lesson 1.1, p.9, 10, 11, 12</p> | <p><a href="https://hmhco.box.com/s/lie67y3msqphca5iyu,ic90vw2g1h54j">https://hmhco.box.com/s/lie67y3msqphca5iyu,ic90vw2g1h54j</a></p> |   |

| 20 | <p>MA.5.NSO.2.2</p> <p>Divide multi-digit whole numbers, up to five digits by two digits, including using a standard algorithm with procedural fluency. Represent remainders as fractions.</p> | n/a | <p>While Reviewer 1 rated this benchmark coverage 3 points higher with a 5, and noted "Multiple representations used," Reviewer 2 stated that "good use of partial quotient initially then it leans into long division standard algorithm for the rest of the division practice."</p> <p>HMH Response: Other methods are used, such as quick pictures in Lesson 1.2, partial quotients in Lesson 1.3, the standard algorithm in Lesson 2.1, interpreting remainders and writing them as fractions in Lesson 2.2, and adjust quotients in Lesson 2.3.</p> | <p>Lesson 1.1</p> <p><a href="https://www.hmhco.com/_C01_Understand_Multiplication_id=1fe07103-1f9b">https://www.hmhco.com/_C01_Understand_Multiplication_id=1fe07103-1f9b</a></p> <p>Lesson 2.5 and 2.6</p> <p><a href="https://www.hmhco.com/_C02_Practice_Multiplication_id=ec0d7d23-05e6-456">https://www.hmhco.com/_C02_Practice_Multiplication_id=ec0d7d23-05e6-456</a></p> |   |

Thanks, Ashley!

Is the issue for the grade 1 quarter standard that they don't show both sides of the quarter as stated in the clarification?

If they stuck the back side of a quarter here, next to the other quarter, would this be sufficient?

I'm trying to come up with a quick solution so that we can get this one moved to green.

Thanks!

Hey Amber,

There is still one concern in grade 1. Otherwise everything else is fine.

All the best,

Ashley M. Harvey

Hi ladies,

Here are, hopefully, the final updates for HMH. They've already been conditionally approved and are on the green list so these aren't high priority they way that they were last week. Please review and mark your comments/approvals for the remaining pending standards.

Thank you!

Hello Amber! Pardon my delay in responding, but both Tavi and I were out of the office today, but in checking my email this afternoon, I saw yours. Thank you, thank you!

Attached are the final changes/responses for Grades 1 and 5. If you need anything further from us, please don't hesitate to let us know

Thank you again, and have a wonderful weekend!

Hi Lisa and Tavi,

We are happy to report that HMMs K-5 series, 6 accelerated, and the two pre-calculus bids are now on the adoption list! We look forward to seeing your final and approved updates for the pending standards in the K-5 series. It's been a pleasure working with you throughout the appeal process.

Thank you,

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?

For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

**Subject:** HMM initial appeal call

This message originated from outside your organization

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

| 4 | n/a                                                                                                                                                                                                                                                                                        | n/a                                      | <p><b>HMH Overall Response:</b> After collecting and analyzing all the scores provided by the reviewers on Grade 1, we believe there was an error in calculations with the scores and that this grade did in fact score a 4. Nonetheless, we have provided responses to any standards where at least one reviewer scored us a 3 or below.</p> <p>Reviewer 1 rates us a 5 here and indicates that " Items focus on true and false. There is a mix of operations being related on both sides of the question as well as opportunities for multiple addends.</p> <p>Reviewer 2s, on the other hand, states that there were too many terms in the equations. They indicated that "The Listen and Draw on p.477, #13 on p.480, and #7 on 481 contain 5 terms, which does not align to the standard and clarifications."</p> <p>HMH Response: There are no more than 3 terms used on one side of an equation. On p. 477; p. 480 and 481 each have only a single equation that shows two terms on one side of the equation and three terms on the other.</p> <p>Additionally, Reviewer 2 wrote that the lesson does "not focus on the meaning of the equal sign.</p> <p>HMH Response: The Math Talk on p. 477 addresses the meaning of the equal sign.</p> |   |   |   |
| 5 | <p>MA.1.AR.2.2</p> <p>Determine and explain if equations involving addition or subtraction are true or false.</p>                                                                                                                                                                          | n/a                                      | <p>Reviewer 2 writes that Clarification 1 calls for students to use "tally marks to skip counting by 5's."</p> <p>HMH Response: Clarification 1 states that students should connect tally marks to counting by 5s, but does not state the expectation that students should skip count tally marks.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |   |   |

| 8  | <p>MA.1.GR.1.2</p> <p>Sketch two-dimensional figures when given defining attributes. Figures are limited to triangles, rectangles, squares and hexagons.</p>                                                                                                           | n/a | <p>Reviewer 1 states there are limited examples of sketching 2-D figures.</p> <p>HMH Response: This is covered on pp.539-540, which has a table where students identify, draw, and give attributes of the shapes. Additionally, on p.521-526, students draw and identify two-dimensional shapes that compose three-dimensional shapes.</p> <p>Reviewer 2 states that "P-521-526 do not align with the standard at all. It is only 2d shapes based on their attributes, not the attributes of a 3D shape."</p> <p>HMH Response: Attributes of 3-D shapes include 2-D shapes, which are included in Lesson 11.5, pp. 521-526. Classifying two- and three-dimensional shapes are found in Lesson 11.1, 11.5, 12.1, and 12.5.</p> |   | <p>Lesson 12.2<br/> <a href="http://www.jmhcd.org/Dimensional">www.jmhcd.org/Dimensional</a><br/>           Lesson. 11.4<br/> <a href="https://www.jmhcd.org/Dimensional">https://www.jmhcd.org/Dimensional</a></p> |   |
| 9  | <p>MA.1.GR.1.3</p> <p>Compose and decompose two- and three- dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares, trapezoids, hexagons, cubes, rectangular prisms, cones and cylinders.</p>                                        | n/a | <p>Reviewer 2 states Lesson 12.5 uses fourths instead of semi-circles.</p> <p>HMH Response: The example mentioned uses two quarter circles to make a half circle, which is then composed to make other shapes.</p> <p>Additionally, reviewer 2 writes "There are some good examples of composing and decomposing 2d and 3d shapes . . . it is lacking the much needed vocabulary."</p> <p>HMH Response: From a standards perspective, using academic language and vocabulary is not mentioned.</p>                                                                                                                                                                                                                            |   | <p>Lesson 12.5<br/> <a href="http://www.jmhcd.org/Dimensional">www.jmhcd.org/Dimensional</a></p>                                                                                                                    |   |
| 10 | <p>MA.1.GR.1.4</p> <p>Given a real-world object, identify parts that are modeled by two- and three-dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares and hexagons, spheres, cubes, rectangular prisms, cones and cylinders.</p> | n/a | <p>Reviewer 1 states that "While there are many examples of real- world objects for stand alone figures (balls, cones, cans, etc.), there are only a few real-world examples of items with multiple identifiable geometric figures . . ." In most other examples, they are identifying the geometric figures in composed shapes.</p> <p>HMH Response: The composite figures were included; however because of their age appropriateness for Grade 1 students. The approach also meets the standard as it is written.</p>                                                                                                                                                                                                      |   | <p>Lesson 11.2<br/> <a href="https://www.jmhcd.org/Dimensional">https://www.jmhcd.org/Dimensional</a></p>                                                                                                           |   |
| 11 | <p>MA.1.M.1.1</p> <p>Estimate the length of an object to the nearest inch. Measure the length of an object to the nearest inch or centimeter.</p>                                                                                                                      | n/a | <p>Reviewer 1 gave us a positive score of 5--a difference of 3 points from Reviewer 2. This reviewer specifically said "Items align to the standard for estimation."</p> <p>Reviewer 2, on the other hand, states that "The clarifications were clear that students would be estimating with inches. Chapter 14 Lesson 3 focuses on estimating with centimeters."</p> <p>HMH Response: The standard is written as follows "Measure the length of an object to the nearest inch or centimeter" so the content as presented meets the standards as they are written.</p> <p>Additionally, reviewer 2 was concerned that non-standard units are used for estimating.</p>                                                         |   | <p>Lessons 14,<br/> <a href="https://www.jmhcd.org/4a93-8">https://www.jmhcd.org/4a93-8</a></p>                                                                                                                     |   |

|    | G                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | H                                                                                                                                                                                                                                                                                                                              | I | J |

| 4 | MA.5.AR.2.3<br>Determine and explain whether an equation involving any of the four operations is true or false.                                                                         | n/a                                              | Reviewer 2 stated "many questions focus on determining which property is being used, which is not a clarification in the BEST standard.<br>HMH Response: this standard is not taught in isolation and taught throughout Grade 5 in equations; with properties, without, and in other formats. Examples of usage are 2.1, p.42; 3.3, p.98; 3.5, p. 110; 11.1 p. 379, and 11.2 p.386.                                                                                                                                                                                                                                                        | Lesson 11.1<br><a href="https://www.correlation">https://www.correlation</a>                                                                                                                                                               |
| 5 | MA.5.AR.3.2<br>Given a rule for a numerical pattern, use a two-column table to record the inputs and outputs.                                                                           | n/a                                              | Reviewer 1 states that instruction is "asking student to write a rule for a given graph."<br>HMH Response: This is an instructional sequence in which students write the ordered pairs to find the rule. This is an example of using standards together and not in isolation (with 5.DP.1.1).<br>Reviewer 2 stated "Most question met the standard except the question in the explore part of Chapter 17 Lesson 2. The pattern does not match the chart."<br>HMH Response: The pattern and the chart match on the aforementioned example.                                                                                                  | Lesson 17.2<br><a href="https://www.om_correlat">https://www.om_correlat</a>                                                                                                                                                               |
| 6 | MA.5.DP.1.1<br>Collect and represent numerical data, including fractional and decimal values, using tables, line graphs or line plots.                                                  | n/a                                              | Reviewer 2 states that the pattern does not match the table in 18.1 Explore, p.631.<br>HMH Response: No table was used in the Explore section.<br>Reviewer 2 also states that fractional measurements of 1/8 are use.<br>HMH Response: All line plots show only halves, thirds or fourths as measures-- calculations, within questions may include other fractions.                                                                                                                                                                                                                                                                        | Lesson 18.1<br><a href="https://www.ret_Data.pdf">https://www.ret_Data.pdf</a>                                                                                                                                                             |
| 7 | MA.5.DP.1.2<br>Interpret numerical data, with whole-number values, represented with tables or line plots by determining the mean, mode, median or range.                                | n/a                                              | HMH Response: In the content, range is explicitly defined and demonstrated in Lesson18.2, p.635 and Lesson 18.5, p. 655.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Lesson 18.2<br><a href="https://www.ret_Data.pdf">https://www.ret_Data.pdf</a>                                                                                                                                                             |
| 8 | MA.5.FR.2.2<br>Extend previous understanding of multiplication to multiply a fraction by a fraction, including mixed numbers and fractions greater than 1, with procedural reliability. | n/a                                              | While Reviewer 1 rated this benchmark coverage a full 3 points higher, noting that coverage includes a "use of models," Reviewer 2 states that mixed numbers were "used in comparative lessons only. Students are directed to simplify answers which is not necessary."<br>HMH Response: Extensive mixed number multiplication is shown in Lesson 9.4, p.357 which is a comparison lesson; comparison is essential to multiplying mixed numbers for estimating products and assessing reasonableness. Also performed with area models in Lesson 13.2, p. 453. Both are examples of not showing the standards in isolation (with 5.GR.2.1). | Lesson 9.4,<br><a href="https://www.nd_Mixed_">https://www.nd_Mixed_</a><br>Lesson 13.2<br><a href="https://www.angles_with">https://www.angles_with</a>                                                                                   |

| E | F                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | G                                                                                                                   | H  |

| <p>When multiplying a given number by a fraction less than 1 or a fraction greater than 1, predict and explain the relative size of the product to the given number without calculating.</p> <p>MA.5.FR.2.3</p>                                | <p>n/a</p> | <p>Reviewer 2 states that "Examples in the text call for completing an operation to figure out the relative comparison. The BEST standards state that students should be able to focus on estimation and assessing the reasonableness of answers."</p> <p>HMH Response: Students learn estimation and assessing the reasonableness of answers by comparing products using the whole number part of the mixed number. In Lessons 10.3 and 10.4, students use models to compare the size of the product to the size of a factor when multiplying fractions. Students then determine that when you find a part of a part, the product will be less than either part. Finally, students understand that when a fraction is multiplied by a number greater than 1, the product will always be greater than the fraction. Building reasoning about the size of a product will help students determine if their solutions are reasonable or help them make reasonable estimates.</p> | <p>Lessons 10.3<br/><a href="https://www.illustrativemathematics.org/HS-Math/10/10.3/10.3.1">https://www.illustrativemathematics.org/HS-Math/10/10.3/10.3.1</a></p> |   |
| <p>Classify triangles or quadrilaterals into different categories based on shared defining attributes. Explain why a triangle or quadrilateral would or would not belong to a category.</p> <p>MA.5.GR.1.1</p>                                 | <p>n/a</p> | <p>Reviewer 1 stated this benchmark coverage 2 points higher, noting "lots of practice with triangles and quadrilaterals."</p> <p>Reviewer 2, on the other hand, states that "Examples classify more than what is necessary. Addresses various polygons not addressed in the BEST standards."</p> <p>HMH Response: Polygons shown are review material, and are also used in 3D prisms; such as the right pentagonal prism on p.491.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Lesson 14.4<br/><a href="https://www.illustrativemathematics.org/HS-Math/10/14.4/14.4.1">https://www.illustrativemathematics.org/HS-Math/10/14.4/14.4.1</a></p>  |   |
| <p>Identify and classify three-dimensional figures into categories based on their defining attributes. Figures are limited to right pyramids, right prisms, right circular cylinders, right circular cones and spheres.</p> <p>MA.5.GR.1.2</p> | <p>n/a</p> | <p>Reviewer 2 states "Extraneous material in lesson. Examples should be limited to right pyramids, right prisms, right circular cylinders, right circular cones and spheres."</p> <p>HMH Response: Pentagonal prism with equal sides and angles that are shown are right prisms, which are included in the benchmarks, p. 491.</p> <p>Reviewer 1 states "Chapter 10, Lesson 5 is not in 5th grade standards; perhaps middle school?"</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Lesson 14.4<br/><a href="https://www.illustrativemathematics.org/HS-Math/10/14.4/14.4.1">https://www.illustrativemathematics.org/HS-Math/10/14.4/14.4.1</a></p>  |   |
| <p>Find the perimeter and area of a rectangle with fractional or decimal side lengths using visual models and formulas.</p> <p>MA.5.GR.2.1</p>                                                                                                 | <p>n/a</p> | <p>HMH Response: This shows benchmarks NOT taught in isolation and is an example of a problem-solving lessons that demonstrates how to solve benchmarks 5.FR.2.2 and 5.FR.2.3. Examples of fractional and decimal side lengths in Lessons 13.1, p.447-450 and 13.2, p.453-456</p> <p>Reviewer 2 rated this benchmark coverage 2 points higher with a 4, noting "Questions cover both fractional and decimal side lengths."</p> <p>Reviewer 1 states that in Lesson 17.3, p.591, students write the ordered pairs to find the rule.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Lesson 10.5<br/><a href="https://www.illustrativemathematics.org/HS-Math/10/10.5/10.5.1">https://www.illustrativemathematics.org/HS-Math/10/10.5/10.5.1</a></p>  |   |
| <p>Identify the origin and axes in the coordinate system. Plot and label ordered pairs in the first quadrant of the coordinate plane.</p> <p>MA.5.GR.4.1</p>                                                                                   | <p>n/a</p> | <p>HMH Response: This is also an example of using standards together and not in isolation. (with 5.GR.4.1 and 5.GR.4.2)</p> <p>Reviewer 2 rated this benchmark coverage 2 points higher with a 4, notes "Materials fairly instruct how to plot and label points."</p> <p>Reviewer 1 states: Conversion included length, volume, and capacity; however, there were no time conversion present."</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Lesson 17.3<br/><a href="https://www.illustrativemathematics.org/HS-Math/10/17.3/17.3.1">https://www.illustrativemathematics.org/HS-Math/10/17.3/17.3.1</a></p>  |   |
| <p>Solve multi-step real-world problems that involve converting measurement units to equivalent measurements within a single system of measurement.</p> <p>MA.5.M.1.1</p>                                                                      | <p>n/a</p> | <p>HMH Response: One simple time conversions is included in 16.3, p.563, but this absence was noted in the errata process and will be corrected on the next printing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>Lesson 16.3<br/><a href="https://www.illustrativemathematics.org/HS-Math/10/16.3/16.3.1">https://www.illustrativemathematics.org/HS-Math/10/16.3/16.3.1</a></p>  |   |

Good morning Amber,

Placing the 2 quarters where you have specified and showing 5 dimes to equal that amount (which would answer the question on the page) would be sufficient.

All the best,

Ashley M. Harvey

Thanks, Ashley!

Is the issue for the grade 1 quarter standard that they don't show both sides of the quarter as stated in the clarification?

If they stuck the back side of a quarter here, next to the other quarter, would this be sufficient?

I'm trying to come up with a quick solution so that we can get this one moved to green.

Thanks!

Hi ladies,

Here are, hopefully, the final updates for HMM. They've already been conditionally approved and are on the green list so these aren't high priority they way that they were last week. Please review and mark your comments/approvals for the remaining pending standards.

Thank you!

Hello Amber! Pardon my delay in responding, but both Tavi and I were out of the office today, but in checking my email this afternoon, I saw yours. Thank you, thank you!

Attached are the final changes/responses for Grades 1 and 5. If you need anything further from us, please don't hesitate to let us know

Thank you again, and have a wonderful weekend!

Hi Lisa and Tavi,

We are happy to report that HMHs K-5 series, 6 accelerated, and the two pre-calculus bids are now on the adoption list! We look forward to seeing your final and approved updates for the pending standards in the K-5 series. It's been a pleasure working with you throughout the appeal process.

Thank you,

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

HMH - Appeal call  
Thu, May 12, 2022 1:00 PM - 1:30 PM (EDT)

Hi Amber,  
Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

**This message originated from outside your organization**

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?

For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,  
Amber Baumbach

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

Thu, May 12, 2022 1:00 PM - 1:30 PM (EDT)

Hi Amber,  
Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?

For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

cid:image005.png@01D865EB.D85AAA10

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

**This message originated from outside your organization**

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMM has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Tue, Apr 26, 2022 11:00 AM - 11:30 AM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

Hi Lisa and Tavi,

We are happy to report that HMHs K-5 series, 6 accelerated, and the two pre-calculus bids are now on the adoption list! We look forward to seeing your final and approved updates for the pending standards in the K-5 series. It's been a pleasure working with you throughout the appeal process.

This message originated from outside your organization

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?  
For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

**Subject:** HMH initial appeal call

This message originated from outside your organization

---

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal  
Tue, Apr 26, 2022 11:00 AM - 11:30 AM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

Nonetheless, we have provided responses to any standards where at least one reviewer scored us a 3 or below.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |   | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |   |
| 5 | <p>MA.1.AR.2.2</p> <p>Determine and explain if equations involving addition or subtraction are true or false.</p>  | n/a                              | <p>Reviewer 1 rates us a 5 here and indicates that "Items focus on true and false. There is a mix of operations being related on both sides of the question as well as opportunities for multiple addends."</p> <p>Reviewer 2s, on the other hand, states that there were too many terms in the equations. They indicated that "The Listen and Draw on p.477, #13 on p.480, and #7 on 481 contain 5 terms, which does not align to the standard and clarifications."</p> <p>HMH Response: There are no more than 3 terms used on one side of an equation. On p. 477; p. 480 and 481 each have only a single equation that shows two terms on one side of the equation and three terms on the other.</p> <p>Additionally, Reviewer 2 wrote that the lesson does "not focus on the meaning of the equal sign."</p> <p>HMH Response: The Math Talk on p. 477 addresses the meaning of the equal sign.</p> |   |   | <p>Lesson 10.8, pp. 477-481 Equal and Not Equal, focuses on True/False and operations on both sides of the equation.</p> <p><a href="https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C10_Addition_and_Subtraction_Relationships.pdf?custom_correlation_id=d905db34-6ce4-44e1-9b5e-235f2f1145f0">https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C10_Addition_and_Subtraction_Relationships.pdf?custom_correlation_id=d905db34-6ce4-44e1-9b5e-235f2f1145f0</a></p> |   |   |
| 6 | <p>MA.1.DP.1.1</p> <p>Collect data into categories and represent the results using tally marks or pictographs.</p> | n/a                              | <p>Reviewer 2 writes that Clarification 1 calls for students to use "tally marks to skip counting by 5's."</p> <p>HMH Response: Clarification 1 states that students should <u>connect</u> tally marks to counting by 5s, but does not state the expectation that students should skip count tally marks.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |   | <p>Lesson 16.3, pp. 673-678 Tally Marks</p> <p>Lesson 16.4, pp.679-685 Make Tally Marks</p> <p><a href="https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C16_Graphing.pdf?custom_correlation_id=f6e6549e-4187-4701-822a-a44b3d09850e">https://www.hmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C16_Graphing.pdf?custom_correlation_id=f6e6549e-4187-4701-822a-a44b3d09850e</a></p>                                                                                          |   |   |

| 4 |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                          |                                                |
| 5 | <p>MA.1.AR.2.2 Clarification 2: Problem types are limited to an equation with no more than four terms. For questions on pages 480 and 481 there are 5 terms instead of 4. There is not a focus on the meaning of the equal sign within the lesson the evidence provided within the Math Talk does not guarantee that every teacher will realize that is the focus of the lesson and not a supplemental piece.</p> | <p>Pages in Lesson 10.8 have been updated to reflect corrections. The 5-term equation is removed. Model and Draw on the upper half of p.478 has been updated to emphasize the meaning of the equal sign. These changes will appear in the digital program immediately and upon reprint of the books.</p> <p>Lesson 10.8: p.478, p.480</p> | <p><a href="https://hnhco.box.com/s/hbhmnhms27gox3vweviiukavykylg">https://hnhco.box.com/s/hbhmnhms27gox3vweviiukavykylg</a></p>         | Lesson aligns to benchmark                     |
| 6 | <p>Lesson does align to the benchmark, however DP.1.1 was identifies while DP1.2 is listed in the teacher edition. Additionally, question 14 on page is 676 is not clear, instead of having students recreate the total using tally marks, the number should be presented for students recognize the connection.</p>                                                                                              | <p>Lesson 16.3 aligns as stated by curriculum specialist: p. 676 corrected. This change will appear in the digital program immediately and upon reprint of the books.</p> <p>Lesson 16.3: p.676</p>                                                                                                                                       | <p><a href="https://hnhco.box.com/s/akkuftqthf2apb300068i10gzsiakwnbi">https://hnhco.box.com/s/akkuftqthf2apb300068i10gzsiakwnbi</a></p> | Lesson aligns to benchmark                     |

| 8 | There are limited opportunities for students to create the own drawings and sketches within the lessons. In lesson 11.5, stuents can draw the sahep indentifies instead of circling.                                                                                                         | Students draw shapes in Lesson 12.2 p.539 given that attributes "curved" and straight"; on p.540, students draw hexagons, rectangles, squares, and triangles, naming the quantity of the attributes (number of sides and vertices.)<br><br>Lesson 12.2: pp. 539, 540                                                                                                                                                                                                                                                 | <a href="https://hmhco.box.com/s/4dr84fb8k0dbrtviwemlc73w9oiv545n">https://hmhco.box.com/s/4dr84fb8k0dbrtviwemlc73w9oiv545n</a> | Lesson aligns to benchmark |
| 9 | The expectation of the benchmark is not to compose 2 quarter circles to make a semi-circle. Benchmark language for figures used should be incorporated within the lesson (semi-circle, triangles, rectangles, squares, trapezoids, hexagons, cubes, rectangular prims, cones and cylinders). | Pages in the following lessons have been updated to reflect corrections: In Lesson 12.3 and Lesson 12.4, students compose new shapes using triangles, rectangles, and trapezoids with pattern blocks and by drawing. In Lesson 12.3, the focus is on spatial relationships relating to part-whole and counting the number of parts used per Clarification 1. These changes will appear in the digital program immediately and upon reprint of the books.<br><br>Lesson 12.3: pp. 545-548<br>Lesson 12.4: pp. 551-554 | <a href="https://hmhco.box.com/s/tauo5iv2ablk8ifd0k9x8yctbx4f7gbd">https://hmhco.box.com/s/tauo5iv2ablk8ifd0k9x8yctbx4f7gbd</a> | Lesson aligns to benchmark |

| 10 | <p>MA.1.GR.1.4</p> <p>Given a real-world object, identify parts that are modeled by two- and three-dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares and hexagons, spheres, cubes, rectangular prisms, cones and cylinders.</p> | n/a | <p>Reviewer 1 states that "While there are many examples of real-world objects for stand alone figures (balls, cones, cans, etc.), there are only a few real-world examples of items with multiple identifiable geometric figures . . . In most other examples, they are identifying the geometric figures in composed shapes."</p> <p>HMH Response: The composite figures were included; however because of their age appropriateness for Grade 1 students. The approach also meets the standard as it is written.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |   | <p>Lesson 11.2, p. 503 Combine Three-Dimensional Shapes<br/> <a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C11_Geometry_Three">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C11_Geometry_Three</a></p> <p>Dimensional Solids.pdf?custom_correlation_id=9ab7c363-029b-41e0-9e51-89f9a6384f6b</p>                      |   |   |
| 11 | <p>MA.1.M.1.1</p> <p>Estimate the length of an object to the nearest inch. Measure the length of an object to the nearest inch or centimeter.</p>                                                                                                                      | n/a | <p>Reviewer 1 gave us a positive score of 5--a difference of 3 points from Reviewer 2. This reviewer specifically said "Items align to the standard for estimation."</p> <p>Reviewer 2, on the other hand, states that "The clarifications were clear that students would be estimating with inches. Chapter 14 Lesson 3 focuses on estimating with centimeters."</p> <p>HMH Response: The standard is written as follows "Measure the length of an object to the nearest inch or centimeter" so the content as presented meets the standards as they are written.</p> <p>Additionally, reviewer 2 was concerned that non-standard units are used for estimating.</p> <p>HMH Response: The tiles and cubes used for measurement are not non-standard units of measure; the tiles are specified to be 1-inch and the unit cubes are 1 cm; this builds an understanding of the connection between counting and then adding units to measurement. Given how this benchmark and the clarifications, we believe this standard is completely met.</p> |   |   | <p>Lessons 14.1, 14.2, 14.3, 14.4, pp.595-616<br/> <a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C14_Measurement.pdf?custom_correlation_id=8fad097b-c311-4a93-824e-8f6ee1824d25</a></p> |   |   |
| 12 | <p>MA.1.M.1.2</p> <p>Compare and order the length of up to three objects using direct and indirect comparison.</p>                                                                                                                                                     | n/a | <p>Reviewer 1 gave us a positive score of 5 (a disparity of 3 points with reviewer 2) and stated "Opportunities for 3 items compared directly and also for indirect comparison."</p> <p>Reviewer 2, on the other hand, states that "Chapter 14 Lesson 3 does not align as it discusses estimating measurement instead of comparing objects in specific units."</p> <p>HMH Response: Students use comparisons of longer or shorter objects so that they can estimate their lengths. More specifically, in 14.5 students compare objects to order them, as stated by the standard.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |   | <p>Lesson 14.3, p. 607, Lesson 14.5, p. 609<br/> <a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b8ed-8b01a31a7e40">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b8ed-8b01a31a7e40</a></p>                 |   |   |
| 13 | <p>MA.1.M.2.1</p> <p>Using analog and digital clocks, tell and write time in hours and half-hours.</p>                                                                                                                                                                 | n/a | <p>Reviewer 2 states that "there is no discussion or use of the vocabulary for digital and analog" within the lessons 15.1-15.4.</p> <p>HMH Response: The benchmark specifies only that students write and tell time and not that they use specified vocabulary. Clocks divided into semicircles is shown in Lesson 15.3.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |   | <p>Lessons 15.1-15.5, pp.631-652<br/> <a href="https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b8ed-8b01a31a7e40">https://www.jmhco.com/content/math/go_math/g1/student/pdf/G1_GoMath_EN_FL_SE_C15_Time.pdf?custom_correlation_id=c34a30c2-3daf-495e-b8ed-8b01a31a7e40</a></p>                            |   |   |

| 4 | No reference to the true/false portion of the benchmark. Questions, 8/9/10 on page 429 are merely asking the students to "create" the values using parentheses -referring to order of operations. | Lesson 12.3, p. 429 has been updated per the reviewer's concern. Students will now determine whether the equation is true or false. If the equation is false, they rewrite the equation to make it true.<br>See the following:<br>Problems 4–6<br>Problems 7–9 | <a href="https://hmhco.box.com/s/m06r85u9dn645mf6md2xjwww266ku9lk">https://hmhco.box.com/s/m06r85u9dn645mf6md2xjwww266ku9lk</a> |

| 6 | <p>MA.5.DP.1.1</p> <p>Collect and represent numerical data, including fractional and decimal values, using tables, line graphs or line plots.</p>                                                  | n/a | <p>Reviewer 2 states that the pattern does not match the table in 18.1 Explore, p.631.</p> <p>HMH Response: No table was used in the Explore section.</p> <p>Reviewer 2 also states that fractional measurements of 1/8 are use.</p> <p>HMH Response: All line plots show only halves, thirds or fourths as measures-- calculations within questions may include other fractions.</p>                                                                                                                                                                                                                                                                 | <p>Lesson 18.1, p. 631<br/> <a href="https://www.hmhco.com/C18_Collect_Represent">https://www.hmhco.com/C18_Collect_Represent</a><br/> <a href="https://www.hmhco.com/C18_Collect_Represent/1ec-9e8c-67283c0000cd">1ec-9e8c-67283c0000cd</a></p>                                                                                                                |   |
| 7 | <p>MA.5.DP.1.2</p> <p>Interpret numerical data, with whole-number values, represented with tables or line plots by determining the mean, mode, median or range.</p>                                | n/a | <p>While Reviewer 1 rated this benchmark coverage a full 3 points higher, noting that the benchmark coverage includes "Instruction on balancing point", Reviewer 2 states "Explanations on how to find mean, mode, and median are aligned; however there is no mention of range."</p> <p>HMH Response: In the content, range is explicitly defined and demonstrated in Lesson18.2, p.635 and Lesson 18.5, p. 655.</p>                                                                                                                                                                                                                                 | <p>Lesson 18.2, p.638; Lesson 18.5, p. 655<br/> <a href="https://www.hmhco.com/C18_Collect_Represent/1ec-9e8c-67283c0000cd">https://www.hmhco.com/C18_Collect_Represent/1ec-9e8c-67283c0000cd</a></p>                                                                                                                                                           |   |
| 8 | <p>MA.5.FR.2.2</p> <p>Extend previous understanding of multiplication to multiply a fraction by a fraction, including mixed numbers and fractions greater than 1, with procedural reliability.</p> | n/a | <p>While Reviewer 1 rated this benchmark coverage a full 3 points higher, noting that coverage includes a "use of models," Reviewer 2 states that mixed numbers were "used in comparative lessons only. Students are directed to simplify answers which is not necessary."</p> <p>HMH Response: Extensive mixed number multiplication is shown in Lesson 9.4, p.357 which is a comparison lesson; comparison is essential to multiplying mixed numbers for estimating products and assessing reasonableness. Also performed with area models in Lesson 13.2, p. 453. Both are examples of not showing the standards in isolation (with 5.GR.2.1).</p> | <p>Lesson 9.4, p. 357<br/> <a href="https://www.hmhco.com/C09_Add_and_Subtract/Custom_correlation_id">https://www.hmhco.com/C09_Add_and_Subtract/Custom_correlation_id</a><br/> Lesson 13.2, p.453<br/> <a href="https://www.hmhco.com/C13_Perimeter_and_Area/Custom_correlation_id">https://www.hmhco.com/C13_Perimeter_and_Area/Custom_correlation_id</a></p> |   |

| 9  | <p>MA.5.FR.2.3</p> <p>When multiplying a given number by a fraction less than 1 or a fraction greater than 1, predict and explain the relative size of the product to the given number without calculating.</p> | n/a | <p>Reviewer 2 states that "Examples in the text call for completing an operation to figure out the relative comparison. The BEST standards state that students should be able to focus on estimation and assessing the reasonableness of answers."</p> <p>HMH Response: Students learn estimation and assessing the reasonableness of answers by comparing products using the whole number part of the mixed number. In Lessons 10.3 and 10.4, students use models to compare the size of the product to the size of a factor when multiplying fractions. Students then determine that when you find a part of a part, the product will be less than either part. Finally, students understand that when a fraction is multiplied by a number greater than 1, the product will always be greater than the fraction. Building reasoning about the size of a product will help students determine if their solutions are reasonable or help them make reasonable estimates.</p> | <p>Lessons 10.3 and 10.4<br/> <a href="https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5">https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5</a></p> |   |
| 10 | <p>MA.5.GR.1.1</p> <p>Classify triangles or quadrilaterals into different categories based on shared defining attributes. Explain why a triangle or quadrilateral would or would not belong to a category.</p>  | n/a | <p>Reviewer 1 stated this benchmark coverage 2 points higher, noting "lots of practice with triangles and quadrilaterals."</p> <p>Reviewer 2, on the other hand, states that "Examples classify more than what is necessary. Addresses various polygons not addressed in the BEST standards."</p> <p>HMH Response: Polygons shown are review material, and are also used in 3D prisms; such as the right pentagonal prism on p.491.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Lesson 14.4, p. 491<br/> <a href="https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5">https://www.hmhco.com/C10_Multiply_Fraction/576f98cf03b5</a></p>   |   |

| <p>/content/math/go_math/g5/student/pdf/G5_GoMath_EN_FL_SEns.pdf?custom_correlation_id=a541362b-c5cb-11ec-866f-</p> | <p>Link and information provided do not address benchmark.</p> | <p>In Lesson 14.1, Identify and Classify Two-Dimensional Figures, students classify triangles as scalene, isosceles, equilateral, acute, obtuse and right by sides and angles. This lesson also includes the classification of quadrilaterals by defining attributes, including parallelograms, rhombi, rectangles, squares and trapezoids. Problem 12 on p. 476 and Problem 6 on p.477 have students use diagrams to show why quadrilaterals belong or do not belong to a category. In Lesson 14.2, Classify Triangles, students continue to classify as scalene, isosceles, equilateral, acute, obtuse and right triangles. Students explain why and equilateral triangle is also a regular polygon on p. 479 and explain why they cannot draw a right equilateral triangle on p. 480. Problem 6 on p. 481 has students identifying and explaining which triangle does not belong. In, Lesson 14.3, Classify Quadrilaterals, students use attributes to classify and compare parallelograms, rhombi, rectangles, squares, and trapezoids. Students explain how trapezoids and parallelograms are different on p. 485.They use a Venn Diagram to sort quadrilaterals and show relationships on p. 486. On p. 487, students explain whether or not a trapezoid can have more than one pair of parallel sides that have the same length. On p. 488, students are given descriptions of quadrilaterals and must identify and explain why the figures fit into the category.</p> <p>Lesson 14.1, p.473, 474, 475, 476, 477, 478<br/>Lesson 14.2, p.479, 480, 481, 482, 483, 484<br/>Lesson 14.3, p.485, 486, 487, 488, 489, 490</p> | <p><a href="https://hmhco.box.com/s/ufpI0Zmhw992ds0qd2wnusqfvg9puca">https://hmhco.box.com/s/ufpI0Zmhw992ds0qd2wnusqfvg9puca</a></p> |

| <p>/content/math/go_math/g5/student/pdf/G5_GoMath_EN_FL_SE_errns.pdf?custom_correlation_id=0b4f9e24-c5cc-11ec-b420-</p>         | <p>It is not the expectation of the benchmarks identified for students to write a rule to describe a relationship.</p> | <p>P. 591 in Lesson 17.3 focuses on the connection of the number line to the x-axis and y-axis and the first number in the ordered pair as the input and the second number as the output. In Lesson 17.4, Students extend their knowledge of rules and patterns acquired in earlier lessons correlating to 5.AR.3.1 and 5.AR.3.2 to plot and label whole-number ordered pairs in the first quadrant of the coordinate plane on pages 597, 598, 599, and 601. Problem 8 on p.600 and Problem 5. on p.602 have students using two-column tables to identify coordinates for a coordinate plane. Lesson 17.5, focuses on identifying whole-number ordered pairs and plotting points with connection of the number line to the x-axis and y-axis. Students use their understanding of inputs and outputs to explain why an ordered pair is incorrect in Problem 28 on p. 606. In Lesson 17.6, students use a two-column table to organize data collected in an experiment and then display the data on a coordinate plane. Students write and plot the points for each ordered pair.</p> <p>Lesson 17.3, p 591<br/>Lesson 17.4, p.597, 598, 599, 600<br/>Lesson 17.5, p.603, 604, 605, 606<br/>Lesson 17.6, p.610, 611, 612</p> | <p><a href="https://hmhco.box.com/s/2afcecd1b74uulr9n2rg3ldjia46vc09">https://hmhco.box.com/s/2afcecd1b74uulr9n2rg3ldjia46vc09</a></p> |

| 13 | Lesson 17.3 still asks students to write a rule which is not an expectation in either of the identified benchmarks. All other lessons align to benchmark. | Lesson 17.3 has been removed from the chapter since MA.5.GR.4.1 and MA.AR.3.2. have adequate standard coverage in other lessons within the program. This change will appear in the digital program immediately and upon reprint of the books. | n/a |

Evidence provided does not met benchmark expectations.</p> | <p>Students have multiplied multi-digit numbers in Grade 4, so in Lesson 1.1, students extend and apply that knowledge. Students estimate and then find the product of multi-digit whole numbers. Problems 3–33 do not specify that students must use a standard algorithm to find the product. Students have learned various methods in previous grades and can apply the method of choice while multiplying multi-digit numbers in Grade 5.<br/><br/> Lesson 1.1, p.9, 10, 11, 12</p> | <p><a href="https://hmhco.box.com/s/tie667y3msqpbca5iyut390vw2e1h54j">https://hmhco.box.com/s/tie667y3msqpbca5iyut390vw2e1h54j</a></p>   |

| 19 | With students only being shown partial products it can be seen that that is the strategy to be used for the entire lesson. If students are not required to use a particular method that should be stated. Student 4th grade instruction and retention of content may not be the same. | The focus of Lesson 1.1 is for students to multiply multi-digit whole numbers including using a standard algorithm with procedural fluency. Examples shown on pages 7 and 8 involve multiplication using partial products as well as using patterns of zeros to find the product of multiples of 10. Direction lines on pages 8–12 encourage students to multiply using the method of their choice. Problem Solving items do not specify methods, therefore students can use any method to solve the multiplications. | <a href="https://hnhco.box.com/s/5jovxhnrsth1xw37cyec1qzgez571fnc">https://hnhco.box.com/s/5jovxhnrsth1xw37cyec1qzgez571fnc</a>                                                                                                                                                                       |                                                                                                                                                                                                                                                                      |

Hi Tavi,

I was just working on that J  
I've scheduled a meeting to discuss the next steps with our math content specialists on Friday at 1:00 pm. Please see the link to the meeting below.

Thanks!

HMM - Appeal  
Fri, May 6, 2022 1:00 PM - 1:30 PM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

<https://meet.goto.com/440187477>

**You can also dial in using your phone.**

United States (Toll Free): [1 866 899 4679](tel:18668994679)

United States: [+1 \(571\) 317-3116](tel:+15713173116)

**Access Code:** 440-187-477

**Join from a video-conferencing room or system.**

Dial in or type: [67.217.95.2](tel:67217952) or [inroomlink.goto.com](http://inroomlink.goto.com)

Meeting ID: 440 187 477

Or dial directly: [440187477@67.217.95.2](tel:440187477@67.217.95.2) or [67.217.95.2###440187477](tel:67.217.95.2###440187477)

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi Lisa,

Grade 5 has been approved by our content specialist J  
In Grade 1, the clarification of MA.1.M.2.2 states, "Clarification 1: Instruction includes the recognition of both sides of a coin."  
Would it be possible to place the back side (or "tails") of a quarter next to the existing quarter here to satisfy that clarification?  
This is on pg. 414.

Once we have this standard cleared we are good to route grades 1 and 5 for approval.

Thank you,

Hello Amber! Pardon my delay in responding, but both Tavi and I were out of the office today, but in checking my email this afternoon, I saw yours. Thank you, thank you!

Attached are the final changes/responses for Grades 1 and 5. If you need anything further from us, please don't hesitate to let us know

Thank you again, and have a wonderful weekend!

Hi Lisa and Tavi,

We are happy to report that HMHs K-5 series, 6 accelerated, and the two pre-calculus bids are now on the adoption list! We look forward to seeing your final and approved updates for the pending standards in the K-5 series. It's been a pleasure working with you throughout the appeal process.

Thank you,

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

HMH - Appeal call  
Thu, May 12, 2022 1:00 PM - 1:30 PM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?  
For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

# Equal Amounts

Florida's B.E.S.T.

- Measurement 1.M.2.3, 1.M.2.2
- Mathematical Thinking & Reasoning MTR.1.1, MTR.2.1, MTR.3.1 MTR.4.1, MTR.5.1, MTR.7.1

**I Can** solve a problem by acting it out.

## UNLOCK the Problem Real World

Blake has 10 pennies. He counts the pennies by twos. What is the total value of the coins?

| Read                                                                                                                 | Plan                                                                       |
|----------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| <p><b>What information am I given?</b></p> <p>Blake has _____ pennies.</p> <p>Blake counts the pennies by _____.</p> | <p><b>What is my plan or strategy?</b></p> <p>I can _____ the problem.</p> |

### Solve

Show how you solve the problem.

\_\_\_\_\_ ¢    \_\_\_\_\_ ¢    \_\_\_\_\_ ¢    \_\_\_\_\_ ¢    \_\_\_\_\_ ¢

Draw a different way to show the value of 10 pennies.

© Houghton Mifflin Harcourt Publishing Company

**FOR THE TEACHER** • Your child used counters to act out the problem. The graphic organizer helps your child analyze the information given in the problem.

**Go Online** For more help

## Try Another Problem

Act it out to solve. Use    .  
Draw and label the coins you use. Write the total.

- What information am I given?
- What is my plan or strategy?

1. Cameron has 6 nickels. How can he show the same amount in a different way?

2. Gemma has 4 dimes. How can she show the same amount in a different way?

3. Atul has 1 quarter and 1 dime. How can he show the same amount in a different way?

**Math Talk**

**MTR 5.1** Use patterns and structure.

Explain how counting dimes by tens is faster than counting by ones.

Name \_\_\_\_\_

**On Your Own** 

Act it out to solve. Use    .

Draw and label the coins you use.  
Write the total.

- ✓ 4. Rosita has 2 quarters and 10 pennies. How can she show the same amount in a different way?

---

5. Daniel has 6 dimes, 2 nickels, and 5 pennies. How can he use 3 coins to show the same amount?

---

6. Buddy counted 5 coins by tens. Then he counted 6 coins by twos. Draw and write the total value of the coins.

---

# Problem Solving • Applications

Use coins. Choose the correct answer.

7. Lennon saves 30 pennies. How many dimes show the same amount?

- 2 dimes                       3 dimes                       1 dime

8. Which coins show the same amount?

9. Idris has 2 nickels. Which shows the same amount in a different way?

**TAKE HOME ACTIVITY** • Ask your child to show 45¢ two different ways.

**Subject:** RE: HMM initial appeal call

Dear Amber - On behalf of HMM, I am sending you the updated Appeal files for the following:

- HMM Florida's B.E.S.T. Go Math! Grade 1
- HMM Florida's B.E.S.T. Go Math! Grade 5
- HMM Florida's B.E.S.T. Into Math Accelerated Grade 6

Please note that for ease, there is no need to sign on to the Ed platform to view links. The files needed are posted to an "open" box folder.

Thank you for your consideration, and please let me know if you require any further information.

Thanks,  
Tavi

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi Lisa,

Grade 5 has been approved by our content specialist J  
In Grade 1, the clarification of MA.1.M.2.2 states, "Clarification 1: Instruction includes the recognition of both sides of a coin."  
Would it be possible to place the back side (or "tails") of a quarter next to the existing quarter here to satisfy that clarification?  
This is on pg. 414.

Once we have this standard cleared we are good to route grades 1 and 5 for approval.

Thank you,

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?  
For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi Lisa,

Grade 5 has been approved by our content specialist J  
In Grade 1, the clarification of MA.1.M.2.2 states, "Clarification 1: Instruction includes the recognition of both sides of a coin."  
Would it be possible to place the back side (or "tails") of a quarter next to the existing quarter here to satisfy that clarification?  
This is on pg. 414.

Once we have this standard cleared we are good to route grades 1 and 5 for approval.

Thank you,  
Amber Baumbach

Hello Amber! Pardon my delay in responding, but both Tavi and I were out of the office today, but in checking my email this afternoon, I saw yours. Thank you, thank you!

Attached are the final changes/responses for Grades 1 and 5. If you need anything further from us, please don't hesitate to let us know

Thank you again, and have a wonderful weekend!

Hi Lisa and Tavi,

We are happy to report that HMHs K-5 series, 6 accelerated, and the two pre-calculus bids are now on the adoption list! We look forward to seeing your final and approved updates for the pending standards in the K-5 series. It's been a pleasure working with you throughout the appeal process.

Thank you,

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

HMH - Appeal call  
Thu, May 12, 2022 1:00 PM - 1:30 PM (EDT)

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?

For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

Good morning ladies,

Please see the three attached spreadsheets for standards review from HMH. I spot checked the links and they all seem to take you straight to the standard/material in question.

Please make sure you are logged into HMH's online portal on your browser prior to opening any of the links on the spreadsheet.

Here is the info to log in:

**FL Evaluator Account:**

<https://www.hmhco.com/ui/login/?connection=91005680>

**Subject:** HMH initial appeal call

**This message originated from outside your organization**

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal  
Tue, Apr 26, 2022 11:00 AM - 11:30 AM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

| 4 | n/a                                                                                                                                                             | n/a                                      | Overall HMH Response: These standards are also found in Grade 6 and 7 of HMH Florida's Best Into Math--both grades which were approved for the adoption list. This program contains the same content as Grade 6 and part of Grade 7.<br><br>While Reviewer 2 scored the content a 5 and stated, "standard is covered completely; all properties are defined and practiced throughout the lesson." Reviewer 1, on the other hand, stated that Clarification 1 (Associative, Commutative, Distributive applied to generating equivalent algebraic expressions) is "not represented".<br><br>HMH Response: In the lesson interleaf for Lesson 8.4 on page 261A, the Associative Property of Addition, Associative Property of Multiplication, Commutative Property of Addition, Commutative Property of Multiplication, and Distributive Property are all listed as review vocabulary. These properties are all defined, with examples, in a table on SE page 262. Additionally, tasks 2 and 3 on pages 262-263 of the SE require students to list the property used in each step of simplifying an expression. On Your Own problems 3, 6, 14, 15, and 19 on pages 264-265, More Practice/Homework problems 6 and 7 on page 267, and Florida Test Prep problem 10 require students to justify their work using properties. |   | Lesson 8.4, p.262<br><a href="https://www.hmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4">https://www.hmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4</a>                                                                                                                                                                                                                                                                                                                                                             |
| 5 | MA.6.AR.1.4<br><br>Apply the properties of operations to generate equivalent algebraic expressions with integer coefficients.                                   | n/a                                      | Reviewer 1 stated that this standard was not represented because set notation was not used.<br><br>HMH Response: Set notation is not a requirement of the benchmark, shown in the example, or mentioned in the clarification. Integers are used in the language of the benchmark.<br><b>Equations</b> - On page 284, Task 4 parts E and F use substitution for a single value. Check Understanding problems 2-4 on page 284 use substitution for a single value. On Your Own problems 10-15 on page 285 have students substitute multiple values. On Your Own problems 16-17 on page 286 have students substitute multiple values. More Practice/Homework problems 7-10 on page 287 have students substitute for a single value. Page 285 problem 11 is the only one involving rational numbers and not just integers. Lessons 9.2 and 9.3 have students use what they learned in lesson 9.1 to check their solutions to equations.<br><b>Inequalities</b> - Lesson 10.1 (pages 322-325 and 327) covers the benchmark for inequalities.                                                                                                                                                                                                                                                                                 |   | Lesson 8.4, pp. 283<br><a href="https://www.hmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4">https://www.hmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4</a><br><br>Lessons 9.2-9.3, pp. 285<br><a href="https://www.hmhco.com/FL_SE_M09_Solve_Prob/11ec-8e6f-ab5d0d29724">https://www.hmhco.com/FL_SE_M09_Solve_Prob/11ec-8e6f-ab5d0d29724</a><br><br>Lesson 10.1, pp. 322-327<br><a href="https://www.hmhco.com/FL_SE_M10_Inequalities/41d7/a4ec30a4">https://www.hmhco.com/FL_SE_M10_Inequalities/41d7/a4ec30a4</a> |
| 6 | MA.6.AR.2.1<br><br>Given an equation or inequality and a specified set of integer values, determine which values make the equation or inequality true or false. | n/a                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 12 | <p>MA.6.DP.1.3<br/>Given a box plot within a real-world context, determine the minimum, the lower quartile, the median, the upper quartile and the maximum. Use this summary of the data to describe the spread and distribution of the data.</p> | n/a | <p>Reviewer 1 stated that "instruction does not include vertical representation of box plot." Instruction includes horizontal representation of box plots.<br/>HMH Response: Vertical box plots are not mentioned anywhere in the benchmark, example, or clarification. We fully cover the benchmark and clarification in lessons 19.2 (pages 629-636) and 19.4 (pages 643-648).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Lesson 19.2, pp. 629-636<br/><a href="https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11">https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11</a></p>                                                                                                                                              |   |
| 13 | <p>MA.6.DP.1.4<br/>Given a histogram or line plot within a real-world context, qualitatively describe and interpret the spread and distribution of the data, including any symmetry, skewness, gaps, clusters, outliers and the range.</p>        | n/a | <p>Reviewer 1 stated that "instruction limited to skewed description . . . and does not focus on describing data as Normal or Bimodal."<br/>HMH Response: Instruction does not focus on describing data as Normal or Bimodal. The benchmark does not mention Bimodal or Normal. The clarification (Appendix C) does not contain Bimodal or Normal in the glossary. We fully cover the benchmark in lessons 19.1 (pages 621-628) and 19.4 (pages 643-648).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Lesson 19.1, pp. 621-628<br/><a href="https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11">https://www.hmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f11</a></p>                                                                                                                                              |   |
| 14 | <p>MA.6.NSO.1.3<br/>Given a mathematical or real-world context, interpret the absolute value of a number as the distance from zero on a number line. Find the absolute value of rational numbers.</p>                                             | n/a | <p>Reviewer 2 stated that "lessons needs various number lines . . . and more practice with absolute value of rational numbers."<br/>HMH Response: Lesson 1.3 contains three horizontal number lines (pages 19, 20, and 21) and two vertical number lines (pages 20 and 22). Students explicitly find the absolute value of a number eight times in the tasks on pages 20 and 21 and eight practice problems on pages 22 and 23. Students must find absolute value in the process of solving other problems in the tasks and practice problems. The benchmark and clarifications are fully covered in lesson 1.3.</p>                                                                                                                                                                                                                                                                                                                                                                                 | <p>Lesson 1.3, pp.19-24<br/><a href="https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052">https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052</a></p>                                                                                                                                                              |   |
| 15 | <p>MA.6.NSO.2.2<br/>Extend previous understanding of multiplication and division to compute products and quotients of positive fractions by positive fractions, including mixed numbers, with procedural fluency.</p>                             | n/a | <p>Reviewer 1 stated that "instruction was limited to multiplication, no division."<br/>HMH Response: Fraction multiplication is covered in Module 2, lessons 2.1-2.3. Fraction division is covered in Module 3, lessons 3.1-3.3. Lesson 3.4 allows students to practice a mixture of multiplication and division of fractions. Modules 2 and 3 fully cover the benchmark and clarification. (Screenshots of TOC for Modules 2 and 3 provided.)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>Lessons 2.1-2.3, pp. 43-49<br/><a href="https://www.hmhco.com/FL_SE_M02_Fraction_N9f3b4a237db7">https://www.hmhco.com/FL_SE_M02_Fraction_N9f3b4a237db7</a></p> <p>Lessons 3.1-3.4, pp.67-94<br/><a href="https://www.hmhco.com/FL_SE_M03_Fraction_D334e954f0a4e">https://www.hmhco.com/FL_SE_M03_Fraction_D334e954f0a4e</a></p> |   |
| 16 | <p>MA.6.NSO.3.2<br/>Rewrite the sum of two composite whole numbers having a common factor, as a common factor multiplied by the sum of two whole numbers.</p>                                                                                     | n/a | <p>While Reviewer 2 rated us a 4 and he noted "benchmark is covered with GCF"; Reviewer 1 stated that the benchmark was not met, with no specific evidence.<br/>HMH Response: Lesson 1.4 Task 2 on page 26 covers GCF and reminds students of the Distributive Property. The end of Task 2 has students re-write <math>24 + 16</math> as <math>8(3) + 8(2) = 8(3 + 2)</math>. This is also practiced in problems on pages 31-32. The benchmark and clarification are fully covered in lesson 1.4.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Lesson 1.4, p.25-32<br/><a href="https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052">https://www.hmhco.com/FL_SE_M01_Rational_N86ef-039c40bat052</a></p>                                                                                                                                                               |   |
| 17 | <p>MA.7.AR.1.2<br/>Determine whether two linear expressions are equivalent.</p>                                                                                                                                                                   | n/a | <p>Reviewer 2 stated that lessons "need more practice with fraction coefficients".<br/>HMH Response: This benchmark is covered in Lessons 8.4 and 8.5. Most of the use of rational coefficients is used in Lesson 8.5, when students are more familiar and confident in working with linear expressions.<br/>Lesson 8.4: Rational coefficients are used in Task 2 on page 262 (1 fractional), Check Understanding problem 2 on page 263, On Your Own problems 12, 16, 24, and 28 on pages 264-266 (3 fractional), and More Practice/Homework problem 8 (fractional) on page 267.<br/>Lesson 8.5: Rational coefficients are used in Task 1 on page 269 (fractional), Task 2 on page 270, Check Understanding problem 4 (fractional) on page 271, On Your Own problems 5, 10, 13, 16, 17, 18, 19, 20, 23, 26, and 30 on pages 272-274 (7 fractional), More Practice/Homework problems 1, 6, and 8 on page 275 (2 fractional), and Florida Test Prep problems 12 and 13 on page 276 (1 fractional).</p> | <p>Lessons 8.4 and 8.5, pp.<br/><a href="https://www.hmhco.com/FL_SE_M08_Numerical_c5cd-11ec-b2e9-4d07eb4">https://www.hmhco.com/FL_SE_M08_Numerical_c5cd-11ec-b2e9-4d07eb4</a></p>                                                                                                                                                |   |

Lauren and all, I just wanted to update my email of last night to add that we also included our appeals for our Precalculus titles. If you require any further information for any of our appeals, please don't hesitate to let us know.

Thank you for your consideration, and have a great weekend!

This message originated from outside your organization

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

This message originated from outside your organization

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform? For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

cid:image010.png@01D866E4.B0E146C0

Hi Lisa,

Grade 5 has been approved by our content specialist J

In Grade 1, the clarification of MA.1.M.2.2 states, "*Clarification 1:* Instruction includes the recognition of both sides of a coin."

Would it be possible to place the back side (or "tails") of a quarter next to the existing quarter here to satisfy that clarification?

This is on pg. 414.

Once we have this standard cleared we are good to route grades 1 and 5 for approval.

Thank you,

Amber Baumbach

Hi Lisa and Tavi,

We are happy to report that HMMs K-5 series, 6 accelerated, and the two pre-calculus bids are now on the adoption list! We look forward to seeing your final and approved updates for the pending standards in the K-5 series. It's been a pleasure working with you throughout the appeal process.

Thank you,

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've

attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

HMH - Appeal call  
Thu, May 12, 2022 1:00 PM - 1:30 PM (EDT)

**Please join my meeting from your computer, tablet or smartphone.**

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?

For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

cid:image010.png@01D866E4.B0E146C0

| 4 | n/a                                                                                                                                                                                                                                                                                 | n/a                                      | <p><b>HMH Overall Response:</b> After collecting and analyzing all the scores provided by the reviewers on Grade 1, we believe there was an error in calculations with the scores and that this grade did in fact score a 4. Nonetheless, we have provided responses to any standards where at least one reviewer scored us a 3 or below.</p> <p>Reviewer 1 rates us a 5 here and indicates that " Items focus on true and false. There is a mix of operations being related on both sides of the question as well as opportunities for multiple addends."</p> <p>Reviewer 2s, on the other hand, states that there were too many terms in the equations. They indicated that "The Listen and Draw on p.477, #13 on p.480, and #7 on 481 contain 5 terms, which does not align to the standard and clarifications."</p> <p>HMH Response: There are no more than 3 terms used on one side of an equation. On p. 477; p. 480 and 481 each have only a single equation that shows two terms on one side of the equation and three terms on the other.</p> <p>Additionally, Reviewer 2 wrote that the lesson does "not focus on the meaning of the equal sign."</p> <p>HMH Response: The Math Talk on p. 477 addresses the meaning of the equal sign.</p> |   |   |   |

| 8  | <p>MA.1.GR.1.2</p> <p>Sketch two-dimensional figures when given defining attributes. Figures are limited to triangles, rectangles, squares and hexagons.</p>                                                                                                           | n/a | Reviewer 1 states there are limited examples of sketching 2-D figures.                                                                                                                                                                                                                                                        |   | <p>HMH Response: This is covered on pp.539-540, which has a table where students identify, draw, and give attributes of the shapes. Additionally, on p.521-526, students draw and identify two-dimensional shapes that compose three-dimensional shapes.</p> <p>Reviewer 2 states that "P-521-526 do not align with the standard at all. It is only 2d shapes based on their attributes, not the attributes of a 3D shape."</p> <p>HMH Response: Attributes of 3-D shapes include 2-D shapes, which are included in Lesson 11.5, pp. 521-526. Classifying two- and three-dimensional shapes are found in Lesson 11.1, 11.5, 12.1, and 12.5.</p> | Lesson 12.2<br><a href="http://www.hmhco.com/Dimensional">www.hmhco.com/Dimensional</a>                         |
| 9  | <p>MA.1.GR.1.3</p> <p>Compose and decompose two- and three- dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares, trapezoids, hexagons, cubes, rectangular prisms, cones and cylinders.</p>                                        | n/a | Reviewer 2 states Lesson 12.5 uses fourths instead of semi-circles.                                                                                                                                                                                                                                                           |   | <p>HMH Response: The example mentioned uses two quarter circles to make a half circle, which is then composed to make other shapes.</p> <p>Additionally, reviewer 2 writes "There are some good examples of composing and decomposing 2d and 3d shapes . . . it is lacking the much needed vocabulary."</p> <p>HMH Reponse: From a standards perspective, using academic language and vocabulary is not mentioned.</p>                                                                                                                                                                                                                          | Lesson 12.5<br><a href="http://www.hmhco.com/Dimensional">www.hmhco.com/Dimensional</a>                         |
| 10 | <p>MA.1.GR.1.4</p> <p>Given a real-world object, identify parts that are modeled by two- and three-dimensional figures. Figures are limited to semi-circles, triangles, rectangles, squares and hexagons, spheres, cubes, rectangular prisms, cones and cylinders.</p> | n/a | Reviewer 1 states that "While there are many examples of real- world objects for stand alone figures (balls, cones, cans, etc.), there are only a few real-world examples of items with multiple identifiable geometric figures . . ." In most other examples, they are identifying the geometric figures in composed shapes. |   | <p>HMH Response: The composite figures were included; however because of their age appropriateness for Grade 1 students. The approach also meets the standard as it is written.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Lesson 11.2<br><a href="http://www.hmhco.com/Dimensional">https://www.hmhco.com/Dimensional</a>                 |
| 11 | <p>MA.1.M.1.1</p> <p>Estimate the length of an object to the nearest inch. Measure the length of an object to the nearest inch or centimeter.</p>                                                                                                                      | n/a | Reviewer 1 gave us a positive score of 5--a difference of 3 points from Reviewer 2. This reviewer specifically said "Items align to the standard for estimation."                                                                                                                                                             |   | <p>Reviewer 2, on the other hand, states that "The clarifications were clear that students would be estimating with inches. Chapter 14 Lesson 3 focuses on estimating with centimeters."</p> <p>HMH Response: The standard is written as follows "Measure the length of an object to the nearest inch or centimeter" so the content as presented meets the standards as they are written.</p> <p>Additionally, reviewer 2 was concerned that non-standard units are used for estimating.</p>                                                                                                                                                    | Lessons 14,<br><a href="https://www.hmhco.com/Dimensional">https://www.hmhco.com/Dimensional</a><br>c311-4a93-8 |

|    | A                                                                                                                                                                                                                            | B   | C                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | D | E | F                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 12 | <p>MA.1.M.1.2</p> <p>Compare and order the length of up to three objects using direct and indirect comparison.</p>                                                                                                           | n/a | <p>Reviewer 1 gave us a positive score of 5 (a disparity of 3 points with reviewer 2) and stated "Opportunities for 3 items compared directly and also for indirect comparison."</p> <p>Reviewer 2, on the other hand, states that "Chapter 14 Lesson 3 does not align as it discusses estimating measurement instead of comparing objects in specific units."</p> <p>HMH Response: Students use comparisons of longer or shorter objects so that they can estimate their lengths. More specifically, in 14.5 students compare objects to order them, as stated by the standard.</p> |   |   | Lesson 14.3<br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-14/HS-1-14-3">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-14/HS-1-14-3</a>                                                                                                                                                                                                                                                                                                                                     |
| 13 | <p>MA.1.M.2.1</p> <p>Using analog and digital clocks, tell and write time in hours and half-hours.</p>                                                                                                                       | n/a | <p>Reviewer 2 states that "there is no discussion or use of the vocabulary for digital and analog" within the lessons 15.1-15.4.</p> <p>HMH Response: The benchmark specifies only that students write and tell time and not that they use specified vocabulary. Clocks divided into semicircles is shown in Lesson 15.3.</p> <p>Reviewer 1 states that students count but do not simply identify coins--that the resources should "provide images of both sides of coins."</p>                                                                                                      |   |   | Lessons 15.1-15.4<br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-15/HS-1-15-1">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-15/HS-1-15-1</a><br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-15/HS-1-15-2">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-15/HS-1-15-2</a><br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-15/HS-1-15-3">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-15/HS-1-15-3</a> |
| 14 | <p>MA.1.M.2.2</p> <p>Identify pennies, nickels, dimes and quarters, and express their values using the ¢ symbol. State how many of each coin equal a dollar.</p>                                                             | n/a | <p>HMH Response: Identification of the coin is necessary to count them. This is why both sides of the coin are used throughout this chapter in order to reinforce their ability to identify and count coins.</p> <p>Reviewer 1 wrote that the benchmark indicates students should "Find the value of combinations of pennies, nickels and dimes up to one dollar."</p>                                                                                                                                                                                                               |   |   | Lesson 9.3,<br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-3">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-3</a><br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-4">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-4</a><br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-1">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-1</a>                   |
| 15 | <p>MA.1.M.2.3</p> <p>Find the value of combinations of pennies, nickels and dimes up to one dollar, and the value of combinations of one, five and ten dollar bills up to \$100. Use the ¢ and \$ symbols appropriately.</p> | n/a | <p>HMH Response: In the Ready for More on Lesson 9.4, p. 412, the TE guide includes direction on how to guide students to find different ways to make 100 cents. This omission was caught by the internal team and was corrected for implementation.</p> <p>Reviewer 2 stated that "Most of the examples for expanded form was based on ___tens + ___ones when it should be the actual number made by the tens plus the ones (for example 70+5)."</p>                                                                                                                                |   |   | Lesson 9.4,<br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-4">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-4</a><br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-1">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-9/HS-1-9-1</a>                                                                                                                                                                              |
| 16 | <p>MA.1.NSO.1.2</p> <p>Read numbers from 0 to 100 written in standard form, expanded form and word form. Write numbers from 0 to 100 using standard form and expanded form.</p>                                              | n/a | <p>HMH Response: There are two places where this is covered in the content --both Lessons 2.5 and 2.9. It shows that students write numbers in 3 forms, ex., 4 tens + 7 ones, 40 + 7, and 47.</p> <p>Reviewer 2 writes "Examples from p.279-296 were not rigorous enough to cover this standard, as most were two single digit numbers. The SE p.303-308 did a much better job covering this material."</p>                                                                                                                                                                          |   |   | Lesson 2.5,<br>Lesson 2.9,<br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-2/HS-1-2-5">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-2/HS-1-2-5</a><br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-2/HS-1-2-9">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-2/HS-1-2-9</a>                                                                                                                                                               |
| 17 | <p>MA.1.NSO.2.4</p> <p>Explore the addition of a two-digit number and a one-digit number with sums to 100.</p>                                                                                                               | n/a | <p>HMH Response: As noted by Reviewer 1, there is good coverage in Chapter 6 which include problem with a two-digit addended greater than 20 and varying representations including models, number lines and place value.</p>                                                                                                                                                                                                                                                                                                                                                         |   |   | Lesson 6.9<br><a href="https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-6/HS-1-6-9">https://www.illustrativemathematics.org/HS-Math/HS-1/HS-1-6/HS-1-6-9</a>                                                                                                                                                                                                                                                                                                                                          |

| 4 | n/a                                                            | Attempts at multicultural teaching is evident. Ex. - types of housing for different groups of people. | Per the reviewer's note, "attempts at multicultural teaching is evident. Ex. types of housing for different groups of people. It is important to note; however, that HMH Florida's B.E.S.T. Go Math! complies with the Addendum to Mathematics Instructional Materials Bid Specifications issued by the Florida Department of Education June 9, 2021 and it does not reference or contain Critical Race Theory or Social Emotional Learning objectives in the Supporting All Learners callouts or elsewhere in the books or the digital experience.<br><br>Without additional details or evidence to back the concern, the only explicit callout that refers to "housing" can be found in Lesson 4.2 in the Teacher Edition. Our plan is to remove this call-out from the digital program immediately and from the print Teacher's Edition upon reprint. |   |   |   | Below is a link to a m reprint.<br><br>Lesson 4.2, Pg 160<br><br><a href="https://hmhco.box.com/s/">https://hmhco.box.com/s/</a> |

| <p>MA.5.FR.2.3</p> <p>When multiplying a given number by a fraction less than 1 or a fraction greater than 1, predict and explain the relative size of the product to the given number without calculating.</p>                                | n/a | <p>Reviewer 2 states that "Examples in the text call for completing an operation to figure out the relative comparison. The BEST standards state that students should be able to focus on estimation and assessing the reasonableness of answers."</p> <p>HMH Response: Students learn estimation and assessing the reasonableness of answers by comparing products using the whole number part of the mixed number. In Lessons 10.3 and 10.4, students use models to compare the size of the product to the size of a factor when multiplying fractions. Students then determine that when you find a part of a part, the product will be less than either part. Finally, students understand that when a fraction is multiplied by a number greater than 1, the product will always be greater than the fraction. Building reasoning about the size of a product will help students determine if their solutions are reasonable or help them make reasonable estimates.</p> | <p>Lessons 10.3<br/> <a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a><br/>           correlation</p> |
| <p>MA.5.GR.1.1</p> <p>Classify triangles or quadrilaterals into different categories based on shared defining attributes. Explain why a triangle or quadrilateral would or would not belong to a category.</p>                                 | n/a | <p>Reviewer 1 stated this benchmark coverage 2 points higher, noting "lots of practice with triangles and quadrilaterals."</p> <p>Reviewer 2, on the other hand, states that "Examples classify more than what is necessary. Addresses various polygons not addressed in the BEST standards."</p> <p>HMH Response: Polygons shown are review material, and are also used in 3D prisms; such as the right pentagonal prism on p.491.</p> <p>Reviewer 1 rated this benchmark coverage a full 3 points higher at a 5, noting that there is "adequate coverage of 3-d figures."</p>                                                                                                                                                                                                                                                                                                                                                                                               | <p>Lesson 14.4<br/> <a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a><br/>           correlation</p>  |
| <p>MA.5.GR.1.2</p> <p>Identify and classify three-dimensional figures into categories based on their defining attributes. Figures are limited to right pyramids, right prisms, right circular cylinders, right circular cones and spheres.</p> | n/a | <p>Reviewer 2 states "Extraneous material in lesson. Examples should be limited to right pyramids, right prisms, right circular cylinders, right circular cones and spheres."</p> <p>HMH Response: Pentagonal prism with equal sides and angles that are shown are right prisms, which are included in the benchmarks, p. 491.</p> <p>Reviewer 1 states "Chapter 10, Lesson 5 is not in 5th grade standards; perhaps middle school?"</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Lesson 10.5<br/> <a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a><br/>           correlation</p>  |
| <p>MA.5.GR.2.1</p> <p>Find the perimeter and area of a rectangle with fractional or decimal side lengths using visual models and formulas.</p>                                                                                                 | n/a | <p>HMH Response: This shows benchmarks NOT taught in isolation and is an example of a problem-solving lessons that demonstrates how to solve benchmarks 5.FR.2.2 and 5.FR.2.3. Examples of fractional and decimal side lengths in Lessons 13.1, p.447-450 and 13.2, p.453-456</p> <p>Reviewer 2 rated this benchmark coverage 2 points higher with a 4, noting "Questions cover both fractional and decimal side lengths."</p> <p>Reviewer 1 states that in Lesson 17.3, p.591, students write the ordered pairs to find the rule.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Lesson 13.1<br/> <a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a><br/>           angles_with</p>  |
| <p>MA.5.GR.4.1</p> <p>Identify the origin and axes in the coordinate system. Plot and label ordered pairs in the first quadrant of the coordinate plane.</p>                                                                                   | n/a | <p>HMH Response: This is also an example of using standards together and not in isolation. (with 5.GR.4.1 and 5.GR.4.2)</p> <p>Reviewer 2 rated this benchmark coverage 2 points higher with a 4, notes "Materials fairly instruct how to plot and label points."</p> <p>Reviewer 2 states: Conversion included length, volume, and capacity; however, there were no time conversion present."</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Lesson 17.3<br/> <a href="https://www.illustrativemathematics.org/HS/index.html">https://www.illustrativemathematics.org/HS/index.html</a><br/>           om_correlat</p>  |

| 4 | n/a                                                                   | The section "supporting all learners" contains references to peoples/cultures/equity in the TE. | Per the reviewer's note, the section Supporting All Learners was the only concern re: Special Topics because it "contains references to people/cultures/equity in the TE." It is important to note that HMH Florida's B.E.S.T. Go Math! complies with the Addendum to Mathematics Instructional Materials Bid Specifications issued by the Florida Department of Education June 9, 2021 and it does not reference or contain Critical Race Theory or Social Emotional Learning objectives in the Supporting All Learners callouts or elsewhere in the books or the digital experience.<br><br>Without additional details or evidence to back the concern, the only explicit Supporting all Learners that refers to "cultures" can be found in Lesson 3.5 Supporting all Learners call-out. Our plan is to remove this call-out from the digital program immediately and from the print Teacher's Edition upon reprint. |   |   |   | Below is a link to a m<br>reprint.<br>Lesson 3.5, Pg. 115B<br><a href="https://hmhco.box.com/s/">https://hmhco.box.com/s/</a> |

| 4 | n/a                                                                                                                                                             | n/a                                      | Overall HMH Response: These standards are also found in Grade 6 and 7 of HMH Florida's Best Into Math--both grades which were approved for the adoption list. This program contains the same content as Grade 6 and part of Grade 7.<br><br>While Reviewer 2 scored the content a 5 and stated, "standard is covered completely; all properties are defined and practiced throughout the lesson." Reviewer 1, on the other hand, stated that Clarification 1 (Associative, Commutative, Distributive applied to generating equivalent algebraic expressions) is "not represented".<br><br>HMH Response: In the lesson interleaf for Lesson 8.4 on page 261A, the Associative Property of Addition, Associative Property of Multiplication, Commutative Property of Addition, Commutative Property of Multiplication, and Distributive Property are all listed as review vocabulary. These properties are all defined, with examples, in a table on SE page 262. Additionally, tasks 2 and 3 on pages 262-263 of the SE require students to list the property used in each step of simplifying an expression. On Your Own problems 3, 6, 14, 15, and 19 on pages 264-265, More Practice/Homework problems 6 and 7 on page 267, and Florida Test Prep problem 10 require students to justify their work using properties. |   | Lesson 8.4, p.262<br><a href="https://www.jmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4">https://www.jmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4</a>                                                                                                                                                                                                                                                                                                                                                                       |
| 5 | MA.6.AR.1.4<br><br>Apply the properties of operations to generate equivalent algebraic expressions with integer coefficients.                                   | n/a                                      | Reviewer 1 stated that this standard was not represented because set notation was not used.<br><br>HMH Response: Set notation is not a requirement of the benchmark, shown in the example, or mentioned in the clarification. Integers are used in the language of the benchmark.<br><br><b>Equations</b> - On page 284, Task 4 parts E and F use substitution for a single value. Check Understanding problems 2-4 on page 284 use substitution for a single value. On Your Own problems 10-15 on page 285 have students substitute multiple values. On Your Own problems 16-17 on page 286 have students substitute multiple values. More Practice/Homework problems 7-10 on page 287 have students substitute for a single value. Page 285 problem 11 is the only one involving rational numbers and not just integers. Lessons 9.2 and 9.3 have students use what they learned in lesson 9.1 to check their solutions to equations.<br><br><b>Inequalities</b> - Lesson 10.1 (pages 322-325 and 327) covers the benchmark for inequalities.                                                                                                                                                                                                                                                                         |   | Lesson 8.4, pp. 283<br><a href="https://www.jmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4">https://www.jmhco.com/FL_SE_M08_Numerical/c5cd-11ec-b2c9-4d07eb4</a><br><br>Lessons 9.2-9.3, pp. 285-287<br><a href="https://www.jmhco.com/FL_SE_M09_Solve_Problems/11ec-8e6f-ab8d0d29724">https://www.jmhco.com/FL_SE_M09_Solve_Problems/11ec-8e6f-ab8d0d29724</a><br><br>Lesson 10.1, pp. 322-325<br><a href="https://www.jmhco.com/FL_SE_M10_Inequalities/41d7a4ec30a4">https://www.jmhco.com/FL_SE_M10_Inequalities/41d7a4ec30a4</a> |
| 6 | MA.6.AR.2.1<br><br>Given an equation or inequality and a specified set of integer values, determine which values make the equation or inequality true or false. | n/a                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 12 | <p>MA.6.DP.1.3<br/>Given a box plot within a real-world context, determine the minimum, the lower quartile, the median, the upper quartile and the maximum. Use this summary of the data to describe the spread and distribution of the data.</p> <p>MA.6.DP.1.4<br/>Given a histogram or line plot within a real-world context, qualitatively describe and interpret the spread and distribution of the data, including any symmetry, skewness, gaps, clusters, outliers and the range.</p> | n/a | <p>Reviewer 1 stated that "instruction does not include vertical representation of box plot." Instruction includes horizontal representation of box plots.</p> <p>HMH Response: Vertical box plots are not mentioned anywhere in the benchmark, example, or clarification. We fully cover the benchmark and clarification in lessons 19.2 (pages 629-636) and 19.4 (pages 643-648).</p> <p>Reviewer 1 stated that "instruction limited to skewed description . . . and does not focus on describing data as Normal or Bimodal."</p> <p>HMH Response: Instruction does not focus on describing data as Normal or Bimodal. The benchmark does not mention Bimodal or Normal. The clarification (Appendix C) does not contain Bimodal or Normal in the glossary. We fully cover the benchmark in lessons 19.1 (pages 621-628) and 19.4 (pages 643-648).</p>                                                                                                                                                      | <p>Lesson 19.1, pp. 621-628<br/><a href="https://www.jmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f1">https://www.jmhco.com/FL_SE_M19_Variability11ec-9255-675fd21d9f1</a></p>                                                                                                                                            |   |
| 13 | <p>MA.6.NSO.1.3<br/>Given a mathematical or real-world context, interpret the absolute value of a number as the distance from zero on a number line. Find the absolute value of rational numbers.</p>                                                                                                                                                                                                                                                                                        | n/a | <p>Reviewer 2 stated that "lessons needs various number lines . . . and more practice with absolute value of rational numbers."</p> <p>HMH Response: Lesson 1.3 contains three horizontal number lines (pages 19, 20, and 21) and two vertical number lines (pages 20 and 22). Students explicitly find the absolute value of a number eight times in the tasks on pages 20 and 21 and eight practice problems on pages 22 and 23. Students must find absolute value in the process of solving other problems in the tasks and practice problems. The benchmark and clarifications are fully covered in lesson 1.3.</p>                                                                                                                                                                                                                                                                                                                                                                                       | <p>Lesson 1.3, pp.19-24<br/><a href="https://www.jmhco.com/FL_SE_M01_Rational_8e6f-039c-40bar052">https://www.jmhco.com/FL_SE_M01_Rational_8e6f-039c-40bar052</a></p>                                                                                                                                                          |   |
| 14 | <p>MA.6.NSO.2.2<br/>Extend previous understanding of multiplication and division to compute products and quotients of positive fractions by positive fractions, including mixed numbers, with procedural fluency.</p>                                                                                                                                                                                                                                                                        | n/a | <p>Reviewer 1 stated that "instruction was limited to multiplication, no division."</p> <p>HMH Response: Fraction multiplication is covered in Module 2, lessons 2.1-2.3. Fraction division is covered in Module 3, lessons 3.1-3.3. Lesson 3.4 allows students to practice a mixture of multiplication and division of fractions. Modules 2 and 3 fully cover the benchmark and clarification. (Screenshots of TOC for Modules 2 and 3 provided.)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Lessons 2.1-2.3, pp. 43-48<br/><a href="https://www.jmhco.com/FL_SE_M02_Fraction_9f3b4a237db7">https://www.jmhco.com/FL_SE_M02_Fraction_9f3b4a237db7</a></p> <p>Lessons 3.1-3.4, pp.67-74<br/><a href="https://www.jmhco.com/FL_SE_M03_Fraction_33fe954f0ade">https://www.jmhco.com/FL_SE_M03_Fraction_33fe954f0ade</a></p> |   |
| 15 | <p>MA.6.NSO.3.2<br/>Rewrite the sum of two composite whole numbers having a common factor, as a common factor multiplied by the sum of two whole numbers.</p>                                                                                                                                                                                                                                                                                                                                | n/a | <p>While Reviewer 2 rated us a 4 and he noted "benchmark is covered with GCF"; Reviewer 1 stated that the benchmark was not met, with no specific evidence.</p> <p>HMH Response: Lesson 1.4 Task 2 on page 26 covers GCF and reminds students of the Distributive Property. The end of Task 2 has students re-write <math>24 + 16</math> as <math>8(3) + 8(2) = 8(3 + 2)</math>. This is also practiced in problems on pages 31-32. The benchmark and clarification are fully covered in lesson 1.4.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Lesson 1.4, p.25-32<br/><a href="https://www.jmhco.com/FL_SE_M01_Rational_8e6f-039c-40bar052">https://www.jmhco.com/FL_SE_M01_Rational_8e6f-039c-40bar052</a></p>                                                                                                                                                           |   |
| 16 | <p>MA.7.AR.1.2<br/>Determine whether two linear expressions are equivalent.</p>                                                                                                                                                                                                                                                                                                                                                                                                              | n/a | <p>Reviewer 2 stated that lessons "need more practice with fraction coefficients".</p> <p>HMH Response: This benchmark is covered in Lessons 8.4 and 8.5. Most of the use of rational coefficients is used in Lesson 8.5, when students are more familiar and confident in working with linear expressions.</p> <p>Lesson 8.4: Rational coefficients are used in Task 2 on page 262 (1 fractional), Check Understanding problem 2 on page 263, On Your Own problems 12, 16, 24, and 28 on pages 264-266 (3 fractional), and More Practice/Homework problem 8 (fractional) on page 267.</p> <p>Lesson 8.5: Rational coefficients are used in Task 1 on page 269 (fractional), Task 2 on page 270, Check Understanding problem 4 (fractional) on page 271, On Your Own problems 5, 10, 13, 16, 17, 18, 19, 20, 23, 26, and 30 on pages 272-274 (7 fractional), More Practice/Homework problems 1, 6, and 8 on page 275 (2 fractional), and Florida Test Prep problems 12 and 13 on page 276 (1 fractional).</p> | <p>Lessons 8.4 and 8.5, pp.<br/><a href="https://www.jmhco.com/FL_SE_M08_Numerical_c5cd-11ec-b2c9-4d07e64">https://www.jmhco.com/FL_SE_M08_Numerical_c5cd-11ec-b2c9-4d07e64</a></p>                                                                                                                                            |   |

| 4 | N/A                                                        | Lack of citation in word problem related to fossil fuels | <p>Per the reviewer's note, "Section 1.2 #91-92 shows chart: global Carbon Emissions from Fossil Fuel Burning. Both say there is climate change but data doesn't show how burning fossil fuels relates to climate change and global warming. No source for data."</p> <p>Our plan is to remove the chart in question, as well as the two word problems associated with it. This will be removed from the digital program immediately and from the print version upon reprint.</p> | <p>Below is a link to a markup of the call-out we are removing from the digital program immediately and from the print version upon reprint.</p> <p><a href="https://hnhco.box.com/s/rhzraverh6fowwq1kq8versv3hcg15">https://hnhco.box.com/s/rhzraverh6fowwq1kq8versv3hcg15</a></p> |   |   |   |   |   |

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?  
For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

Thank you,

Amber Baumbach

This message originated from outside your organization

---

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal  
Tue, Apr 26, 2022 11:00 AM - 11:30 AM (EDT)

Hi all,

Content specialists have reviewed your submissions and we've scheduled a call for this afternoon at 1:00 PM to discuss. Please note that we are only addressing standards in grade 1 and grade 5. Standards for grade 6 accelerated have been fully approved. I've attached the spreadsheet with the most recent comments. Anything marked in green is approved and no further action is needed. Anything marked in red needs further discussion/edits.

Please see below for the link to the meeting invite.

Hi Amber,

Our submission to DOE included .pdfs of the changes we intended to make to address the issues related to inclusion of special topics. We believed that we would hear from DOE first, and then we would make the changes. If DOE desires for us to make the changes first, please let us know, and we will immediately make the changes on our digital content platform. Just let us know.

Thanks,  
Tavi

Hi Lisa,

I'm looking at the special topics concerns that reviewers have noted. I see on the link on the spreadsheet that these sections have been marked up for removal. However, when I look at the section on your digital platform, the section marked for removal is still there. Do you know when these will be removed from your digital platform?  
For example, for Kindergarten, this is what I see in the materials (the green box is marked for removal on the spreadsheet):

**This message originated from outside your organization**

Hi Tavi,

Thank you so much for your willingness to work with the Department regarding your appeal submission. We have scheduled the initial negotiation call for Tuesday, April 26<sup>th</sup>, at 11:00 AM (EST). Please feel free to forward this meeting invite to all necessary parties. At this time HMH has received all necessary data, evaluations, and details related to the appeal process. If you do not have this information, please let me know as soon as possible.

We look forward to speaking with you on Tuesday.

HMH - appeal

**Subject:** IM Appeals-Tracking

Hi Jim,

I have attached the tracking spreadsheet for appeals. Any issues with special topics are pasted on each publishers tab. All standards alignment issues are separate pdf's with reviewer evaluations.

Let me know if you need anything else!

| 12    | <p>2. Chapter 3 Example 5 is about the spread of a “contagious flu virus” that a student spreads.</p>                                           | <p><b>EXAMPLE 5</b> Spread of a Virus A student returns from vacation with a contagious flu virus. The spread of the virus is modeled by</p> $y = \frac{1}{1 + 4000e^{-0.0001x}}$ <p>where <math>x</math> is the number of days since the student returned and <math>y</math> is the number of students who have contracted the virus. The spread of the virus is modeled by</p> $y = \frac{1}{1 + 4000e^{-0.0001x}}$ <p>1. How many students are infected after 2 weeks of class?</p> <p>2. At what time of day is the number of students infected in a class at a maximum?</p> <p><b>Graphical Solution</b></p> <p>Use the graphing utility to graph the function <math>y = \frac{1}{1 + 4000e^{-0.0001x}}</math> for <math>0 \leq x \leq 14</math>. The graph shows that the number of students infected in a class is at a maximum of 1 when <math>x = 0</math>.</p> <p>1. The number of students infected after 2 weeks (14 days) is approximately 0.9999.</p> <p>2. The number of students infected in a class is at a maximum of 1 when <math>x = 0</math>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |      |      |      |      |      |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |  |  |  |  |

| 21 | Do materials align to Rule 6A-1.094124, F.A.C., which prohibits Critical Race Theory (CRT), in instructional materials?                                                            | 2                                                     | I found several places where CRT could be said to be present, albeit usually indirectly. (All page numbers are from the teacher version). On page 1, the books says that algebra is a language that describes the world and tells us about things including 'racial bias'. (It also says it will cover 'ethnic diversity in the US', which it uses in a practice problem on page 91, but the example seems relatively harmless). On page 51, the book defines polynomials by the example of an "implicit" racial bias test (called Project Implicit) by which "2 million people have tested their racial prejudice... most groups' average scores fall between 'slight' and 'moderate' bias, but the differences among age groups are intriguing." The exercise problem is on page 61. The numbers come from Project Implicit, a real-world organization whose mission is to educate people that people and institutions unconsciously have implicit racial prejudice. On pages 214-215, problem 103 graphs people who support laws against interracial marriage by decade. However, unrelated to the graphs, the problem goes out of its way to mention the Supreme Court decision on same-sex marriage, making an analogy that opposing the legalization of same-sex marriage is like the opposition to interracial marriage. In another odd example, on page 533 problem 51 asks students to graph "Percentage who don't approve of Marriage |                      |

On page 281, exercises 27-28 ask students to                                                                                                                                                                                                                                                                                                                                            |
| 25 | <p>1. Pg. 933 uses late 1700s report to talk about population growth and food shortages. Subject is melancholy and based on something predicted in the 1700s.</p>                 | <p><b>Thomas Malthus on Population Growth</b></p> <p>In the late 1700s, the British economist Thomas Malthus presented a report that criticized those who thought that life was going to continue to improve for humans. Malthus put his report together quickly and titled it <i>An Essay on the Principle of Population as it Affects the Poor</i>. Malthus argued that because the human population tends to increase geometrically (1, 2, 4, 16, and so on) and that food supplies will likely only increase arithmetically (1, 2, 3, 4, and so on), populations would grow faster than food supplies. Malthus suggested that there are other checks on population growth (and he considered these natural and a good thing). Nonetheless, he was concerned that poverty is inevitable and will continue.</p> <p>Malthus used historical data to suggest that population growth has been doubling every twenty-five years. In the late 1700s, Malthus surmised that the youth of the country along with the vast amount of areas conducive to farming would lead to a birth rate that exceeded most countries in the world.</p> <p>On the other hand, he noted that there are other checks on population growth. On the one hand, he called preventative checks, these are checks that increase the death rate. Positive checks include war, famine, and natural disasters. Malthus believed that fear of famine was a major reason the birth rate may decrease. After all, who would want to have a child knowing the child may suffer from hunger, or worse, starvation?</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <p>R210 States that most people have slight or moderate bias and this is dependent on age and political identification. Emphasis that racism is embedded in American society.</p>               | <p style="text-align: center;"><b>Adding and Subtracting Polynomials</b></p>  <p>What? Me? Racist? More than 2 million people have tested their racial prejudice using an online version of the Implicit Association Test. Most groups' average scores fall between "slight" and "moderate" bias, but the differences among groups, by age and by political identification, are intriguing.</p> <p>In this section's Exercise Set (Exercises 103 and 104), you will be working with models that measure bias:</p> $S = 0.3x^3 - 2.8x^2 + 6.7x + 30$ $S = -0.03x^3 + 0.2x^2 + 2.3x + 24.$                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |   |
| <p>Pg. 48 again mentions the implicit association test and says, "most groups' average scores fall between slight and moderate bias. Emphasis that racism is embedded in American society."</p> | <p style="text-align: center;"><b>How We Define Polynomials</b></p> <p>More than 2 million people have tested their racial prejudice using an online version of the Implicit Association Test. Most groups' average scores fall between "slight" and "moderate" bias, but the differences among age groups are intriguing.</p> <p>In this section's Exercise Set (Exercises 91 and 92), you will be working with a model that measures bias:</p> $S = 0.3x^3 - 2.8x^2 + 6.7x + 30.$ <p>In this model, <math>S</math> represents the score on the Implicit Association Test. (Higher scores indicate stronger bias.) The variable <math>x</math> represents age group.</p>  <p style="text-align: center;"><i>Old Dog ... New Chicks</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |   |
| <p>9. chapter 1 intro uses 2006 <i>An Inconvenient Truth</i> by Al Gore to push that humans cause global warming. Article is 15 yrs old and has been proven inaccurate</p>                      | <p>There is strong scientific consensus that human activities are changing the Earth's climate. Scientists now believe that there is a striking correlation between atmospheric carbon dioxide concentration and global temperature. As both of these variables increase at significant rates, there are warnings of a planetary emergency that threatens to condemn coming generations to a catastrophically diminished future.</p> <p>In this chapter, you'll learn to approach our climate crisis mathematically by creating formulas, called functions, that model data for average global temperature and carbon dioxide concentration over time. Understanding the concept of a function will give you a new perspective on many situations ranging from climate change to using mathematics in a way that is similar to making a movie.</p> <p><small>*Sources: Al Gore, <i>An Inconvenient Truth</i>, Rodale, 2006; Time, April 3, 2006; <i>Falling Storms</i>, September 28, 2013</small></p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Here's where you'll find these applications:</b></p> <p>A mathematical model involving global warming is developed in Example 9 in Section 1.4. Using mathematics in a way that is similar to making a movie is discussed in the Blitzzer Bonus on page 225.</p> </div> |   |   |
| <p>Pg. 156 Talks about probability of divorce. Context not relevant or meaningful.</p>                                                                                                          | <p style="text-align: center;"><b>EXERCISES</b> <b>Modeling Atmospheric and Sea Level Temperature</b></p> <p><b>1. DATA</b> The following table shows the average annual temperature in degrees Fahrenheit for the city of San Francisco from 1970 to 2010. The data is modeled by the function <math>T(x) = 0.0001x^3 - 0.0012x^2 + 0.0023x + 54.5</math>, where <math>T(x)</math> is the average annual temperature in degrees Fahrenheit and <math>x</math> is the number of years since 1970.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |   |

| <p>Page 337 Pushes vaccine as the only way to stop coronavirus from 2020. Content not relevant or meaningful to students as many have a religious or moral belief against vaccines.</p>  | <p>In 2020, our lives were upended with a sense of uncertainty about the future. The coronavirus, the COVID-19 pandemic, has affected millions of Americans, resulting in the loss of lives and livelihoods. As of this writing, the pandemic is far from under control, with experts predicting that between 70% and 90% of the U.S. population will be infected. Figure 2.12 shows the number of new coronavirus cases for seven selected days in 2020.</p> <p>Source: Center for Disease Control</p>                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |
| <p>15. Pg. R435, ch. 6 intro mentions gender imbalance and sexual abstinence among young adults. Emphasis does not portray gender fairness, advocacy and is biased.</p>                  | <p>As our intellects develop, we learn to reverse the direction of our thinking. Reversibility of thought is found throughout arithmetic and algebra: addition is reversed by subtraction; multiplication is reversed by division; multiplying polynomials is reversed by factoring. In this chapter, we reverse the process of raising a number to an <math>n</math>th power by finding an <math>n</math>th root. Models with roots describe an array of unique applications, including gender imbalance on campus, the percentage of full-time college students with jobs, marriage discrimination, sexual abstinence among young adults, and the pay gap between men's and women's earnings.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |

Same as #1</p>                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |            |    |    |   |    |    |    |    |    |   |   |                            |    |   |    |    |   |    |    |    |    |   |                                 |   |   |   |   |   |   |   |   |   |    |  |  |
| <p>7. Page 828, section 12.6. Lesson talks about the relationship between education and prejudice. No source for the data, no explanation of type of prejudice.<br/>8. pg. 198 A1 Gore/Rush Limbaugh argument</p>                                                                  | <p><b>Scatter Plots and Correlation</b></p> <p>Is there a relationship between education and prejudice? With increased education, does a person’s level of prejudice tend to decrease? Notice that we are interested in two quantities—years of education and level of prejudice. For each person in our sample, we will record the number of years of school completed and the score on a test measuring prejudice. Higher scores on this 1-10 test indicate greater prejudice. Using <math>x</math> to represent years of education and <math>y</math> to represent scores on a test measuring prejudice, <b>Table 12.17</b> shows these two quantities for a random sample of ten people.</p> <p><b>TABLE 12.17</b> Recording Two Quantities in a Sample of Ten People</p> <table border="1"> <thead> <tr> <th>Respondent</th> <th>A</th> <th>B</th> <th>C</th> <th>D</th> <th>E</th> <th>F</th> <th>G</th> <th>H</th> <th>I</th> <th>J</th> </tr> </thead> <tbody> <tr> <td>Years of education (<math>x</math>)</td> <td>12</td> <td>5</td> <td>14</td> <td>13</td> <td>8</td> <td>10</td> <td>16</td> <td>11</td> <td>12</td> <td>4</td> </tr> <tr> <td>Score on prejudice test (<math>y</math>)</td> <td>1</td> <td>7</td> <td>2</td> <td>3</td> <td>5</td> <td>4</td> <td>1</td> <td>2</td> <td>3</td> <td>10</td> </tr> </tbody> </table> | Respondent | A  | B  | C | D  | E  | F  | G  | H  | I | J | Years of education ( $x$ ) | 12 | 5 | 14 | 13 | 8 | 10 | 16 | 11 | 12 | 4 | Score on prejudice test ( $y$ ) | 1 | 7 | 2 | 3 | 5 | 4 | 1 | 2 | 3 | 10 |  |  |

| <p>60 12. pg. 411<br/>lesson talks about how modern emphasis on ideal body shape is "major cause of eating disorders among adolescent women" no factual data given.</p> | <p><b>TELEVISION, MOVIES, AND MAGAZINES PLACE GREAT EMPHASIS ON PHYSICAL BEAUTY. OUR CULTURE</b> emphasizes physical appearance to such an extent that it is a central factor in the perception and judgment of others. The modern emphasis on thinness as the ideal body shape has been suggested as a major cause of eating disorders among adolescent women.</p>                                                                                                                                  |                                                                                                        |   |
| <p>61 13. pg. 879<br/>Purpose of the Electoral College (author's opinion) is given without counter argument or historical facts.</p>                                    | <p><b>Electoral College</b></p> <p>The Electoral College is a body of electors that elects the President and Vice President of the United States. It is made up of 538 electors, each representing a state or the District of Columbia. The number of electors for each state is based on the number of senators and representatives that state has in Congress. The District of Columbia has three electors. To win the presidency, a candidate must receive a majority of 270 electoral votes.</p> |                                                                                                        |   |
