

#### **OVERVIEW**

The study was conducted for CNN by SSRS, an independent research company. Surveys were obtained **November 1-30**, 2023 with a representative sample of n=1,795 respondents. By implementation of a full probability design via **Address-Based Sampling (ABS)**, U.S. households were randomly selected to participate and were first reached via mail. Adults ages 18 or older completed the survey via web (n=1,659) or phone (n=136). The margin of sampling error for total respondents is +/- 3.2 at the 95% confidence level. The design effect is 1.95. For results among the n=1,481 registered voters, the margin of sampling error is +/-3.5. More information about SSRS can be obtained by visiting www.ssrs.com.

# EMBARGOED FOR RELEASE: Wednesday, December 6 at 12:00 p.m.

#### **NOTE ABOUT RESULTS**

Unless otherwise noted, results beginning with the August 3-6, 2017 survey and ending with the April 21-26, 2021 survey are from polls conducted by SSRS via telephone only. For more information about other trend data included in this topline, please see the "More on Methodology" section at the end of this document.

Results beginning with the March 31-April 2, 2006 survey and ending with the April 22-25, 2017 survey are from telephone surveys conducted by ORC International. Results before March 31, 2006 are from telephone surveys conducted by Gallup.

Question text noted in parentheses was rotated or randomized. Values less than 0.5 percent are indicated by an asterisk (\*).

#### **NOTE ABOUT CROSSTABS**

Surveys were conducted among a representative sample of the adult population, ages 18 or older, of the United States. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum N=125 unweighted cases. Results for subgroups with fewer than N=125 unweighted cases are not displayed and instead are denoted with "SN" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

A1. Do you approve or disapprove of the way Joe Biden is handling his job as president?

A1cDK. If you had to choose, do you lean more toward approving or disapproving of the way Joe Biden is handling his job as president?

### Q15. Which comes closer to your view: [RESPONSES ROTATED IN ORDER FOR HALF/IN REVERSE ORDER FOR HALF]

Total Respondents	The amount of crime and violence in America will be the same regardless of who wins the presidency next year	The outcome of the presidential election next year could have a big effect on the amount of crime and violence in America	No opinion
November 1-30, 2023	44%	55%	1%

Registered voters	The amount of crime and violence in America will be the same regardless of who wins the presidency next year	The outcome of the presidential election next year could have a big effect on the amount of crime and violence in America	No opinion
November 1-30, 2023	42%	57%	1%

#### **COMPARE TO:**

Registered voters	The amount of crime and violence in America would be the same regardless of who wins the presidency	The outcome of the presidential election could have a big effect on the amount of crime and violence in America	No opinion
October 1-4, 2020	31%	64%	4%

#### MORE ON METHODOLOGY

A total of n=1,795 adults were surveyed by web and telephone nationwide using an Address-Based Sample design. To invite potential respondents for the new poll, researchers mailed letters to each randomly selected address, asking an eligible adult, age 18 or older, in the household to take part in the survey. Those receiving the letters had the choice of taking the survey online or calling a dedicated phone number to take the poll with a live interviewer. For a subset of those addresses, phone calls were made later into the data collection period to attempt to complete the interview with those who had not yet taken the online survey or called in to take the survey. Surveys were conducted in English and Spanish.

Results for the full sample have a margin of sampling error of +/- **3.2** percentage points. Results for the sample of 1,481 registered voters have a margin of sampling error of +/- **3.5** percentage points.

Among the entire sample, 29% described themselves as Democrats, 30% described themselves as Republicans, and 41% described themselves as independents or members of another party.

All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect national Census figures for gender, race, age, education, region of country, and population density, and Pew Research Center's NPORS figures for frequency of internet use. The sample was also weighted among self-reported 2020 voters for recalled 2020 vote within counties, grouped by county vote share for Biden and Trump. The benchmark for recalled 2020 vote was taken from county-level National Election Pool (NEP) presidential election results provided by CNN. The party identification numbers reported above are self-reported and have not been weighted to a specific parameter.

Surveys were conducted among a representative sample of the adult population, age 18 or older, of the United States. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum n=125 unweighted cases. Results for subgroups with fewer than n=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

#### **NOTE ON TRENDS**

All included trend points were based on surveys conducted using probability-based sampling methods. Some surveys included as trend points in this document were conducted using different methodologies, or with different combinations of sponsors. Unless otherwise noted, results beginning with the August 3-6, 2017 survey and ending with the April 21-26, 2021 survey are from polls conducted by SSRS via telephone only. Here are more details on the methodology behind each CNN poll conducted by SSRS using other methods.

Address-Based Sampling	Probability Panel: Web + Phone	Probability Panel: Web only	Probability Panel: SMS only
