MEMORANDUM FOR

The President

The Task Force on Environmental Pollution, which did such an outstanding job, was different from your other task forces, in that it was also a Panel of your Science Advisory Committee. It is continuing, as a Panel to consider a series of questions related to Environmental Pollution. The topics presently under consideration include:

- Manpower
- Effects of pollutants directly on man
- Effects of pollutants on living organisms other than man
- Soil pollution
- Disposal of solid wastes, including junk cars
- Monitoring
- Biological control of pests
- Supersonic transport and cloud formation
- The effects of carbon-dioxide on climate
- Improvement of equipment useful in pollution control
- Separation of sanitary wastes and storm water run-off
- Nitrogen and phosphorus enrichment of waters

The subpanels will report in May, and a final Panel report will be finished in the Fall.

May I suggest letters of thanks to the Task Force members, even though they are continuing work on the problem as members of a PSAC Panel.
