### **General Information:**

The AJC 2024 General Election Survey was a live interviewer telephone survey conducted June 11-20, 2024 that included a total of 1,000 likely general election voters in Georgia. Likely general election voters were respondents who had voted in the 2020 general election and/or the 2022 general election and/or the 2024 Presidential Preference Primary; who indicated they were currently registered to vote in Georgia; and who were *definitely* or *probably* going to vote in the 2024 general election. The survey was administered by the School of Public and International Affairs Survey Research Center at the University of Georgia. Interviews were conducted in English. A dual-frame statewide random sample consisting of approximately 90% cell phone numbers and 10% landline numbers was obtained through L2 (L2 is a sampling vendor that maintains a database constructed from state voter registration lists. Through commercial sources, phone numbers have been appended to the individual records (registrants) that make up these lists). The survey results were weighted using iterative proportional raking in order to ensure the sample was representative of the 2024 general electorate in terms of race, sex, age, education, and political party. The calculated margin of error for the total sample is +/-3.1 points at the 95% confidence level. This would mean that if 50% of respondents indicate a topline view on an issue, we can be 95% confident that the population's view on that issue is somewhere between 53.1% and 46.9%.

### **Verification:**

Before results for any head-to-head election match-up are released to the *AJC*, they are corroborated by an outside entity. More specifically, the outside entity replicates our reported results for any head-to-head races and confirms they are the same. For this survey, the results we report for the 2024 general election were verified by the Wason Center for Public Policy at Christopher Newport University in Newport News, VA.

### **Statistical Calculations:<sup>1</sup>**

President (Biden vs. Trump): The difference between first-place candidate Trump's estimated vote share and Biden's estimated vote share, at 5.1, is not statistically significant. In plain English, this race is a statistical tie.

---

<sup>1</sup>The formula used to determine if the difference in vote percentages between candidates is statistically significant is derived from Alastair J. Scott and George A.F. Seber. 1983. "Difference of Proportions from the Same Survey." *The American Statistician* 37(4): 319-320.

Q1: If the election for president were being held TODAY, and the candidates were \_\_\_\_\_, for whom would you vote?
