Seized At Sea: Iranian Weapons Smuggled to the Houthis

This product provides a visual comparison of Iranian weapons and weapon components interdicted in transit to the Houthis in Yemen on 11 and 28 January 2024. Photographs of missiles displayed by the Iranians—as well as debris acquired from previous Houthi attacks, compared with those of the interdicted materiel—strongly indicate their Iranian origin. Between 2015 and 2024, the United States and its partners have interdicted at least 20 Iranian smuggling vessels, seizing ballistic, cruise, and surface-to-air missile (SAM) components, antitank guided missiles (ATGMs), unmanned aerial vehicles (UAVs), and thousands of assault rifles, rocket components, and other illicit weapons destined for the Houthis. The Houthis probably have used Iran-supplied weapons to conduct more than 100 attacks against land-based targets in Israel, Saudi Arabia, the United Arab Emirates, and Yemen and dozens of attacks targeting ships in the Red Sea and Gulf of Aden.^{1,2}

Iranian Smuggling Enables Houthi Attack Campaign

Since 2015, Iran's Islamic Revolutionary Guard Corps-Qods Force (IRGC-QF) has been smuggling weapons and weapon components to the Houthis, which has enabled the advancement of the Houthis' military capabilities. As of 30 April 2024, the Houthis have used Iran-supplied ballistic and cruise missiles to conduct at least 100 attacks against land-based targets in Israel, Saudi Arabia, the United Arab Emirates, and Yemen and at least 56 attacks targeting ships in the Red Sea and Gulf of Aden. Between 2015 and 2024, the United States and its partners have interdicted at least 20 Iranian smuggling vessels, seizing ballistic, cruise, SAM missile components, ATGMs, UAVs, and thousands of assault rifles, rocket components, and other illicit weapons destined for the Houthis. This graphic is focused on Iran's provision of missiles and missile components to the Houthis because they represent the most technically sophisticated weapons Iran is providing the Houthis.^{3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18}

11 and 28 January Interdictions of Iranian Weapons

In January, U.S. forces conducted two operations to impede Iranian smuggling of lethal aid from Iran to the Houthis. On 11 January, the U.S. Navy conducted a nighttime raid of an Iranian dhow traveling near the coast of Somalia, resulting in the seizure of various components for ballistic and cruise missiles. On 28 January, a forward-deployed U.S. Coast Guard vessel interdicted a dhow operating in the Arabian Sea, again seizing components for Iranian-origin ballistic and antitank guided missiles.^{19 20}

11 January Interdiction

Components seized during the 11 January interdiction are used in the Houthis' ballistic and cruise missile systems and air defense systems, shown below

Iran and Houthi Antiship Cruise Missile Comparison

The interdicted materiel shares key identifiable features with Iranian antiship cruise missiles, including the **stabilizer fin (1)**, **rocket booster (2)**, **air-intake cabin (3)**, and **nose cone (4)**.

The Iranian Tolu-4 turbojet engine, used in the Noor ASCM, has unique features—including the **compressor stage (5)** and **stator (6)**—that are consistent with engine debris recovered from the 11 December 2023 Houthi attack on the M/T Strinda.^{21 22 23 24}

Qiam/Burkan Ballistic Missile Comparison

Since 2017, the Houthis have used Burkan missiles, the Houthi name for the Iranian Qiam. The Houthis have launched the Burkan-3 missile against several countries in the region. Burkan debris recovered following a 2017 Houthi strike in Saudi Arabia features **markings (1)** and **fuel ports (2)** that are consistent with an Iranian Qiam variant. ²⁵

358 (Saqr) Surface-to-Air Missile Comparison

The Houthis' Saqr surface-to-air missile (SAM) exhibits nearly identical features to a missile interdicted on a dhow headed to Yemen in 2020 as the Iranian 358 SAM displayed for Russian officials in Tehran in September 2023. The Saqr and 358 both have distinctive features, which include **front-mounted fins (1)** and **rear-mounted fins (2)** in an X-shaped orientation and the **engine (3)**.

The Houthis have used the Saqr to attack U.S. UAVs in Yemen. In addition to the Houthis, Iran proliferated the 358 to partners and proxies in Iraq and Lebanon.²⁸

Dehlavieh Antitank Guided Missile Comparison

The Dehlavieh-2 is an Iranian-developed copy of the Russian Kornet-EM antitank guided missile (ATGM). The system has an extended range of 8 kilometers and an improved warhead capability. The interdiction on 28 January captured, for the first time, the Dehlavieh and Dehlavieh-2 launchers. The characteristics of these captured launchers—including the **missile rail (1)**, **sight head (2)**, **traversing unit (3)**, **joining fixture (4)**, and **tripod legs (5)**—are consistent with the Dehlavieh ATGM system displayed in Iran.
