8 *Attorneys for Plaintiff Hualapai Tribe*

9 IN THE UNITED STATES DISTRICT COURT
10 FOR THE DISTRICT OF ARIZONA

11 Hualapai Indian Tribe of the Hualapai Indian
12 Reservation, Arizona,

13 *Plaintiff,*

14 v.

15 Debra Haaland in her official capacity as
16 the United States Secretary of the Interior;
17 United States Bureau of Land Management;
18 Ray Suazo in his official capacity as
19 State Director of the United States Bureau of
20 Land Management; and Amanda Dodson
21 in her official capacity as Field Office
22 Manager of the United States Bureau of Land
23 Management Kingman Field Office,

24 *Defendants.*

No. CV-24-_____

**COMPLAINT FOR VACATUR,
DECLARATORY AND
INJUNCTIVE RELIEF**

25 DATED this 2nd day of August 2024.

26 /s/Laura Berglan
27 Laura Berglan

28 *Attorney for Plaintiff*

INTRODUCTION

1
2 1. This suit challenges the U.S. Bureau of Land Management’s (“BLM”) approval of a lithium exploration project that threatens a medicinal spring sacred to the Hualapai Tribe called Ha’Kamwe’. For generations and through modern day, Tribal members have used Ha’Kamwe’ (also known as Cofer Hot Spring) for cultural and traditional purposes. It features prominently in tribal songs and stories about their history and connection to their land, including those known as the Salt Song Trail. Both the historic flow and temperature of the spring are important attributes for its traditional uses. Located at Cholla Ranch on lands recently taken into trust by the Department of the Interior for the benefit of the Hualapai Tribe, Ha’Kamwe’ is recognized as a Traditional Cultural Property (“TCP”) eligible for listing on the National Register of Historic Places. On June 6, 2024, BLM issued a Decision Record (“DR”), Finding of No Significant Impact (“FONSI”), and Final Environmental Assessment (“Final EA”) for the proposed Project. On July 9, 2024, based on the DR, FONSI, and Final EA, BLM issued its decision approving the company’s Plan of Operations, authorizing the Project.

1 2. As approved, the Sandy Valley Exploration Project (Phase 3) (“Project”)
2 will allow Arizona Lithium (“Company”) to drill 131 exploratory wells in search of
3 lithium on BLM-controlled lands directly adjacent to the spring. These exploratory
4 wells—some of which will be drilled close to Ha’Kamwe’—will penetrate deep below
5 ground into the aquifer that supports the spring’s flows. The Project will also create
6 noise, light, vibrations, and other disturbances that will degrade Ha’Kamwe’s character
7 and harm Tribal members’ use of the spring for religious and cultural ceremonies. It will
8 adversely impact other resources important to the Tribe too, like plants and wildlife.
9 Despite repeated efforts by the Tribe to protect its sacred property, BLM ignored these
10 harms and approved the Project. In doing so, it violated its mandates under the National
11 Environmental Policy Act (“NEPA”) and the National Historic Preservation Act
12 (“NHPA”). The Tribe brings suit under these statutes to stop harm to Ha’Kamwe’ and
13 other natural resources.

14 3. The Hualapai Tribe repeatedly attempted to secure protection for
15 Ha’Kamwe’ and other resources important to the Tribe from impacts of this Project
16 throughout the NEPA process, including by becoming a Cooperating Agency, providing
17 comments about (among other things) the critical importance of Ha’Kamwe’ to Tribal
18 members and the impact of the Project on critical aspects of their culture, and attempting
19 to discuss its concerns with BLM.

20 4. Among other requests, the Tribe asked BLM to consider alternatives to the
21 Project—like drilling fewer wells or moving them farther from the spring—to reduce its
22 negative effects. However, BLM refused to consider a reasonable range of alternatives to
23 Big Sandy, Inc.’s proposal, considering only denying or approving the full exploration
24 plan as proposed by the Company. As explained below, BLM violated NEPA by failing
25 to consider a middle-ground alternative that would address the Tribe’s concerns.

26 5. NEPA also requires BLM to take a “hard look” at the environmental
27 impacts of the exploration activity. Here, BLM failed to consider a recent study
28 concluding that the Project is likely to cause impacts to Ha’Kamwe’. Instead, it relied on

1 a single twenty-four-year-old study conducted for a different purpose to conclude that
2 there will be no impact on Ha’Kamwe’. BLM’s failure to consider the most recent study,
3 which focused specifically on the impacts of this Project on Ha’Kamwe’, violated its
4 obligation to take a “hard look” at the Project’s impacts.

5 6. The NHPA requires BLM to consider the impact of its actions on historic
6 properties. BLM concluded that the Project will have no effect on Ha’Kamwe’, even
7 though it is located very close to the Project, and even though BLM identified a list of
8 impacts to Ha’Kamwe’ in its Final EA for the Project. BLM attempted to avoid a finding
9 of adverse effect by simply labeling these impacts as temporary. BLM’s unsupported and
10 self-contradicted finding of no effect under the NHPA is arbitrary and capricious.

11 7. BLM failed to reconsider its finding of no effect under the NHPA despite
12 requests from both the Tribe and the Advisory Council on Historic Preservation
13 (“ACHP”)—the expert agency on NHPA matters—to reconsider that finding in light of
14 impacts to Ha’Kamwe’ as set out in the Final EA.

15 8. In short, BLM approved the Project without appropriately considering a
16 reasonable range of alternatives or taking a hard look at water resources under NEPA and
17 without mitigation measures under the NHPA for Ha’Kamwe’ and other resources
18 important to the Tribe, thus violating NEPA and the NHPA.

19 9. This action is brought by the Hualapai Tribe against Debra Haaland,
20 Secretary of the Interior, BLM; Ray Suazo, State Director of the BLM Arizona State
21 Office; and Amanda Dodson, Field Office Manager of the BLM Kingman Field Office.
22 The Hualapai Tribe seeks vacatur of the illegal agency decisions, as well as declaratory
23 and injunctive relief under the Administrative Procedure Act. Specifically, the Hualapai
24 Tribe challenges BLM’s June 6, 2024, DR, FONSI, and Final EA for the Project and
25 BLM’s July 9, 2024, Decision Letter approving the exploration plan and the required
26 financial guarantee, which authorized the Project to proceed. *See* U.S. Bureau of Land
27 Mgmt., *Big Sandy Inc. Phase 3 Sandy Valley Exploration Project*, DOI-BLM-AZ-C010-
28 2021-0029-EA (June 2024), <https://eplanning.blm.gov/eplanning-ui/project/2012598/510>.

1 **JURISDICTION AND VENUE**

2 10. This action arises under NEPA, 42 U.S.C. § 4321 *et seq.*, the NHPA, 54
3 U.S.C. § 300101 *et seq.*, and the APA, 5 U.S.C. § 500 *et seq.*, which waives the
4 Defendants’ sovereign immunity. The Court may issue a declaratory judgment and
5 further relief pursuant to 28 U.S.C. §§ 2201–2202 and 5 U.S.C. §§ 705–706.

6 11. Jurisdiction is proper in this Court under 28 U.S.C. § 1331 (federal
7 question) and 28 U.S.C. § 1346 (United States as defendant). An actual justiciable
8 controversy exists between the parties within the meaning of 28 U.S.C. § 2201.

9 12. Venue is proper in this district court pursuant to 28 U.S.C. § 1391(e)(1)
10 because officers of the United States are named defendants in their official capacities, and
11 the federal land that is the subject of this action lies in this district. Venue is also proper
12 in this Court pursuant to 28 U.S.C. § 1391(e)(1) because the decision to approve the
13 Project occurred in BLM offices in this district.

14 13. This case should be assigned to the Prescott Division of this Court because
15 the Project area lies within the counties of this Division and the challenged agency
16 actions were taken within these counties. LR Civ. 77.1(a)

17 **PARTIES**

18 14. Plaintiff Hualapai Tribe (“Tribe”) is a federally recognized Indian tribe
19 located in northwestern Arizona. The Tribe is formally recognized by the Secretary of the
20 Interior as enjoying the privileges and immunities that accompany tribal status. *See*
21 Indian Entities Recognized by and Eligible to Receive Services from the United States
22 Bureau of Indian Affairs, 89 Fed. Reg. 944 (Jan. 8, 2024). The Tribe currently has
23 approximately 2,300 enrolled members.

24 15. Hualapai, or “People of the Tall Pines,” historically inhabited an area of up
25 to seven million acres, with archaeological evidence dating to 600 A.D. The Tribe’s
26 homeland stretches from the Grand Canyon southward to the Bill Williams and Santa
27 Maria Rivers and from the Black Mountains eastward to the San Francisco Peaks, located
28 near what is today Flagstaff, Arizona.

1 16. The Tribe’s ancestral lands include the Big Sandy River Valley, where
2 Ha’Kamwe’ and the Project are located. The Big Sandy River Valley is a sacred
3 interconnected landscape for the Tribe. Ha’Kamwe’ is located on land known as Cholla
4 Canyon Ranch, which is held in trust for the Tribe. Pub. L. No. 117-349, § 12; 136 Stat.
5 6225, 6252 (2023). Cholla Canyon is directly adjacent to the Project site and will be
6 surrounded on three sides by proposed exploratory drilling.

7 17. Tribal members use the area where the Project is situated for a variety of
8 traditional and cultural purposes, including gathering native plants and other materials,
9 observing wildlife, and holding ceremonies that are central to their cultural life and
10 traditions. The Tribal members’ ability to continue these practices, especially with
11 respect to the sacred site of Ha’Kamwe’, will be severely adversely impacted by the
12 proposed drilling activity. The Project risks depleting the flow and altering the
13 temperature of Ha’Kamwe’, both of which are essential to the hot spring’s medicinal and
14 sacred qualities. The Tribe’s members intend to continue to use the public lands on which
15 the Project is located on an ongoing basis in the future although their experience would
16 be negatively impacted by the Project.

17 18. The Tribe brings this action in its own capacity and as *parens patriae* on
18 behalf of its members. The Tribe and its members’ cultural, spiritual, recreational,
19 conservation, and wildlife preservation values have been, are being, and will continue to
20 be adversely and irreparably injured by Defendants’ failure to follow federal law. These
21 are actual, concrete injuries caused by the BLM’s refusal to comply with environmental
22 and cultural resource preservation laws. The Tribe’s injuries will be redressed by the
23 relief sought.

24 19. The Tribe has a substantial interest in ensuring that BLM complies with all
25 applicable laws, including the procedural requirements of NEPA, the NHPA, and the
26 APA. The Tribe was a Cooperating Agency under NEPA and submitted extensive
27 comments to BLM during both the public comment period for the Draft EA and as a
28 Cooperating Agency. The Tribe also filed a State Director Review request that was

1 denied. All of the issues and claims raised in this complaint were previously raised to the
2 agency and are properly before this Court for judicial review. The Tribe has exhausted its
3 administrative remedies.

4 20. Defendant BLM is an administrative agency within the U.S. Department of
5 the Interior, responsible for managing federal lands and subsurface mineral estates
6 underlying federal, state, and private lands across the United States, including the land
7 and mineral estate at issue in this Project.

8 21. Defendant Debra Haaland, sued in her official capacity, is the U.S.
9 Secretary of Interior. As Secretary, Ms. Haaland is the official ultimately responsible for
10 managing federal public lands and resources and in that capacity is responsible for
11 implementing and complying with applicable laws and regulations.

12 22. Defendant Ray Suazo is sued in his official capacity as the State Director of
13 BLM in Arizona. As State Director, Mr. Suazo is the official ultimately responsible for
14 managing Arizona's federal public lands and resources and in that capacity is responsible
15 for implementing and complying with applicable laws and regulations.

16 23. Defendant Amanda Dodson, sued in her official capacity, is the Field
17 Office Manager for BLM's Kingman Field Office. As Field Office Manager, Ms. Dodson
18 is responsible for administering and managing public lands and resources within the
19 Kingman Planning Area, including the lands and resources located within and around the
20 Project area. Ms. Dodson is the official responsible for reviewing staff recommendations
21 on the proposed action, reviewing the environmental assessment for the Project,
22 considering and rejecting alternatives, and ultimately approving the Project. Ms. Dodson
23 signed the July 9, 2024 decision approving the Project's Plan of Operations.

24 **STATUTORY BACKGROUND**

25 **A. National Historic Preservation Act of 1966**

26 24. The NHPA established a national preservation program to protect historic
27 properties as a cooperative effort between the federal government and states, local
28

1 governments, Tribes, Native Hawaiian organizations, and private organizations. 54
2 U.S.C. § 300101.

3 25. The NHPA charges the ACHP with the responsibility to “advise the
4 President and the Congress on matters relating to historic preservation,” and to “review
5 the policies and programs of Federal agencies and recommend” methods for harmonizing
6 those policies and programs with the NHPA. 16 U.S.C. § 470j(a)(1), (6).

7 26. Section 106 of NHPA requires federal agencies to consider the impact of
8 their actions on historic properties. 54 U.S.C. § 306108. As a part of this process, the
9 agency must determine the area of potential effects, which is the geographic area or areas
10 within which an undertaking may directly or indirectly cause alterations in the character
11 or use of historic properties. 36 C.F.R. § 800.16(d). The agency must then determine
12 whether the Project will affect any historic property within the area of potential effects.
13 *Id.* § 800.4. An effect is defined as an alteration to the characteristics of a historic
14 property qualifying it for inclusion in the National Register. *Id.* § 800.16(i).

15 27. If the agency concludes that a historic property will be affected, it must
16 then determine whether the effects are adverse. *Id.* § 800.5. Effects are adverse the
17 proposal “may alter, directly or indirectly, any of the characteristics of a historic property
18 that qualify the property for inclusion in the National Register in a manner that would
19 diminish the integrity of the property’s location, design, setting, materials, workmanship,
20 feeling, or association.” *Id.* § 800.5(a)(1). If adverse effects are found, then the agency
21 must explore measures to avoid, minimize, or mitigate adverse effects on historic
22 properties and reach a written agreement with the State or Tribal Historic Preservation
23 Officer on measures to resolve them. *Id.* § 800.6.

24 28. Federal agencies must consult with any Tribe that “attaches religious and
25 cultural significance” to a historic property affected by an undertaking. 54 U.S.C. §
26 302706(b); 36 C.F.R. § 800.2(c)(2)(ii). This consultation must recognize the government-
27 to-government relationship between the Federal Government and Tribes and give the
28 Tribe the opportunity to “advise on the identification and evaluation of historic

1 properties, including those of traditional religious and cultural importance” and
2 “participate in the resolution of adverse effects.” 36 C.F.R. § 800.2(c)(2)(ii). Tribes
3 “possess special expertise in assessing the eligibility of historic properties that may
4 possess religious and cultural significance to them.” 36 C.F.R. § 800.4(c)(1).

5 **B. National Environmental Policy Act**

6 29. NEPA is the “basic national charter for protection of the environment.” *Ctr.*
7 *for Biological Diversity v. Bernhardt*, 982 F.3d 723, 734 (9th Cir. 2020). The law has
8 “twin aims.” *Balt. Gas & Elec. Co. v. Nat. Res. Def. Council*, 462 U.S. 87, 97 (1983).
9 First, a federal agency must “consider every significant aspect of the environmental
10 impact of a proposed action”; and second, the agency must “inform the public that it has
11 indeed considered environmental concerns in its decisionmaking process.” *Kern v. U.S.*
12 *Bureau of Land Mgmt.*, 284 F.3d 1062, 1066 (9th Cir. 2002) (internal quotations and
13 citations omitted). The Fiscal Responsibility Act (“FRA”) amended NEPA on June 3,
14 2023. However, BLM’s review of the proposed Project began prior to FRA’s enactment,
15 so the pre-FRA NEPA requirements apply.

16 30. To fulfill these purposes, NEPA requires that: (1) agencies take a “hard
17 look” at the environmental impacts of their actions before the actions occur, thereby
18 ensuring “that the agency, in reaching its decision, will have available, and will carefully
19 consider, detailed information concerning significant environmental impacts,” and (2)
20 “the relevant information will be made available to the larger audience that may also play
21 a role in both the decisionmaking process and the implementation of that decision.”
22 *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 349 (1989); “General
23 statements about ‘possible’ effects and ‘some risk’ do not constitute a ‘hard look’ absent
24 a justification regarding why more definitive information could not be provided.”
25 *Neighbors of Cuddy Mountain v. U.S. Forest Serv.*, 137 F.3d 1372, 1380 (9th Cir. 1998).

26 31. NEPA also requires an agency to prepare a detailed statement regarding the
27 alternatives to a proposed action. *See* 42 U.S.C. § 4332(C)(iii), (E). Consideration of
28

1 reasonable alternatives is necessary to ensure that the agency has taken into account all
2 possible approaches to, and potential environmental impacts of, a particular project.

3 32. Courts review an EA “with two purposes in mind: to determine whether it
4 has adequately considered and elaborated the possible consequences of the proposed
5 agency action when concluding that it will have no significant impact on the
6 environment, and whether its determination that no EIS is required is a reasonable
7 conclusion.” *Env’t Def. Ctr.*, 36 F.4th at 872 (9th Cir. 2022) (citation omitted).

8 33. The Department of Interior’s implementing regulations, codified at 43
9 C.F.R. §§ 46.10–46.450, specify that EAs “must contain objective analyses that support
10 conclusions concerning environmental impacts.” 43 C.F.R. § 46.310(g).

11 34. Additionally, the Department of Interior’s regulations require BLM to
12 “consult, coordinate, and cooperate with . . . tribal governments . . . concerning the
13 environmental effects of any Federal action” that is “within the jurisdictions or related to
14 the interests” of the Tribe. 43 C.F.R. § 46.155.

15 **C. Administrative Procedure Act (APA)**

16 35. The APA provides a right of review for any “person suffering legal wrong
17 because of agency action.” 5 U.S.C. § 702. Actions that are reviewable under the APA
18 include final agency actions “for which there is no other adequate remedy in a court.” *Id.*
19 § 704.

20 36. Under the APA, reviewing courts shall “hold unlawful and set aside agency
21 action, findings, and conclusions found to be . . . arbitrary, capricious, an abuse of
22 discretion, or otherwise not in accordance with law.” 5 U.S.C. § 706(2)(A).

23 37. While a court’s review of an agency decision under the arbitrary and
24 capricious standard is narrow, an agency must nevertheless “examine the relevant data
25 and articulate a satisfactory explanation for its action, including a ‘rational connection
26 between the facts found and the choice made.’” *Motor Vehicle Mfrs. Ass’n v. State Farm*
27 *Mutual Auto. Ins. Co.*, 463 U.S. 29, 43 (1983) (quoting *Burlington Truck Lines, Inc. v.*
28 *U.S.*, 371 U.S. 156, 168 (1962)). In general, an agency decision is arbitrary and

1 capricious where “the agency has relied on factors which Congress has not intended it to
2 consider, entirely failed to consider an important aspect of the problem, offered an
3 explanation for its decision that runs counter to the evidence before the agency, or is so
4 implausible that it could not be ascribed to a difference in view or the product of agency
5 expertise.” *Id.*

6 **FACTUAL BACKGROUND**

7 **A. Ha’Kamwe’ and the Interconnected Cultural Landscape**

8 38. The Hualapai Tribe holds sacred an interconnected cultural landscape in the
9 area surrounding Ha’Kamwe’ near Wikieup, Arizona. The landscape consists of
10 archaeological sites, traditional cultural places, the final resting place of Hualapai people,
11 native plants, wildlife, and water resources, including the sacred medicinal hot spring
12 Ha’Kamwe’.

13 39. The site of Ha’Kamwe’, as well as the surrounding Big Sandy River
14 Valley, mountains, hills, and deserts, are part of the ancestral homelands of the Hualapai
15 Tribe.

16 40. Ha’Kamwe’ is part of a sacred cultural landscape recounted in what is
17 known collectively as the Salt Spring Trail. Ha’Kamwe’ means “warm spring.” The
18 spring is specifically recounted by one of the Hualapai keepers of the Salt Song Trail
19 cycle as part of the song cycle and documented in highly sensitive oral history interviews
20 and audio recordings of Salt Songs that the Tribe keeps privately.

21 41. Since time immemorial, the Hualapai people have gone to Ha’Kamwe’ for
22 healing and prayer, and to conduct ceremonies related to birth, young women’s coming
23 of age, and other important life transitions.

24 42. In 2002, in connection with another unrelated proposal, see *infra* at 45-46.
25 BLM and the Western Area Power Authority (“WAPA”), under the Department of
26 Energy, determined that Ha’Kamwe’ is eligible for listing in the National Register of
27 Historic Places as a Traditional Cultural Property (“TCP”).
28

1 43. Ha’Kamwe’ is located on a parcel of land held in trust by the Department
2 of the Interior for the Hualapai Tribe and known as Cholla Canyon Ranch. The Hualapai
3 Tribe uses the land at Cholla Canyon for ceremonial purposes, economic pursuits such as
4 horticulture, and tribal use or recreation.

5 44. Cholla Canyon Ranch is directly adjacent to the proposed Project site and
6 would be surrounded on three sides by the proposed exploratory drilling.

7 **B. Previous Projects and Exploration at the Project Site**

8 45. BLM first studied Ha’Kamwe’ and the aquifer that feeds it in 1999–2002
9 when assessing the since canceled Big Sandy Energy Project. Caithness Big Sandy, LLC
10 (“Caithness”) had planned to develop a gas-fired power plant in the area southeast of
11 Wikieup.

12 46. BLM and WAPA conducted a draft Environmental Impact Statement and
13 Supplemental Analysis that included many relevant findings about the impact of
14 development in the area on Ha’Kamwe’ and the Hualapai Tribe’s cultural resources. *See*
15 U.S. Bureau of Land Mgmt. & Western Area Power Admin., *Big Sandy Energy Project:*
16 *Draft Environmental Impact Statement*, BLM/AZ/PL-01/004, DOE/EIS-0315 (June
17 2001); *see also* U.S. Bureau of Land Mgmt. & Western Area Power Admin., *Big Sandy*
18 *Energy Project: Supplement Analysis*, BLM/AZ/PL-01/004, DOE/EIS-0315 (May 2002)
19 (“Supp. Analysis”).

20 47. It was as part of this process that BLM and WAPA determined Ha’Kamwe’
21 to be a TCP eligible for listing on the National Register of Historic Places.

22 48. The Big Sandy Energy Project was ultimately abandoned, in part because
23 of impacts to Ha’Kamwe’. *See* Supp. Analysis at 3-9 (“[T]he Hualapai Nation considers
24 the spring a traditional cultural resource and the spring is a National Register-eligible
25 property to which Project impacts cannot be satisfactorily mitigated . . .”).

26 49. In 2018 and 2019, Hawkstone Mining, Ltd., an Australian company, under
27 their domestic subsidiary Big Sandy, Inc., conducted two phases of exploratory drilling
28 for lithium clay on BLM-managed public lands adjacent to Ha’Kamwe’.

1 50. In 2021, Hawkstone Mining, Ltd. formally changed its name to Arizona
2 Lithium, Ltd.

3 51. In Phase 1, the Company drilled 12 holes in the Project area. In Phase 2, it
4 drilled 37 holes in the Project area.

5 52. BLM never notified or consulted with the Tribe prior to authorizing these
6 drilling operations.

7 **C. Phase 3 Sandy Valley Exploration Project**

8 53. In September 2019, the Company, doing business under its previous name,
9 Big Sandy Inc., submitted an exploration plan to the BLM Kingman Field Office for the
10 Project, the Big Sandy Inc., Sandy Valley Exploration Project (Phase 3).

11 54. The Project would include 131 drilling sites on BLM-managed public lands
12 to explore mining claims for lithium and poly-metal minerals. It would directly disturb 21
13 acres of public land, and the drill holes are expected to reach depths of approximately 300
14 feet into the aquifer.

15 55. BLM waited until June 6, 2020, eight months after Big Sandy, Inc.
16 submitted its proposed plan of operations in September 2019, to contact the Hualapai
17 Tribe about the Project. BLM's letter invited the Tribe to participate in an NHPA Section
18 106 consultation and requested the Tribe's help in identifying cultural properties or other
19 areas of concern that may be affected by the Project. Notably, BLM's letter did not
20 mention Ha'Kamwe', even though the Project would surround the spring on three sides.

21 56. On June 29, 2020, the Tribe sent a letter accepting the invitation for
22 consultation. The letter also informed BLM of Ha'Kamwe's existence and status as a
23 TCP, expressed concern over the Project's effects on the spring, and requested
24 Cooperating Agency status under NEPA. When BLM did not respond, the Tribe sent
25 another letter dated November 2, 2020, raising these concerns again and requesting a
26 response.

27 57. On November 10, 2020, BLM formally determined that the Project would
28 not affect any historic properties for purposes of the NHPA. under 36 C.F.R. §

1 800.4(d)(1). It did so having defined an area of potential effects that cut out Cholla
2 Ranch, including Ha’Kamwe’.

3 58. In April 2021, the Hualapai Tribal Council passed Resolution 24-2021, the
4 Hualapai Tribe Objection to the Sandy Valley Lithium Project. The resolution opposed
5 the Plan, the Sandy Valley Exploration Project, and any further disturbance of the sacred
6 cultural landscape by mining or exploration activities. The Inter-Tribal Association of
7 Arizona, which comprises 21 Tribal governments in Arizona, passed a similar resolution
8 the same month.

9 59. The Hualapai Tribe submitted comments on the Draft EA on June 10, 2021,
10 and supplemental comments on July 9, 2021, both within the public comment period. The
11 Tribe’s comments highlighted how BLM failed to consult with the Tribe and failed to
12 analyze affected tribal interests, rights, and resources, including impacts on Ha’Kamwe’.

13 60. The ACHP—which, as noted, is the expert agency on NHPA issues—sent a
14 letter to BLM on January 11, 2023, and again on May 31, 2024, urging BLM to revisit its
15 finding of no effect on cultural resources under the NHPA. In its May 31, 2024, letter the
16 ACHP, after reviewing the Draft EA, found “that there is the clear potential for effects on
17 the Ha’Kamwe’ historic property, including noise, vibration, and disruption to cultural
18 practices conducted by the Tribe.” Letter from Christopher Koepfel, Office of Federal
19 Agency Program, Advisory Council on Historic Preservation to Amanda Dodson, Field
20 Manager, Bureau of Land Mgmt., 2 (May 31, 2024). The BLM failed to respond to
21 ACHP’s May 31, 2024, letter.

22 61. The ACHP explained how the proposed drilling activity could harm the
23 spring and its historic character:

24 [T]he characteristics of the historic property qualifying it for inclusion in
25 the National Register include (in addition to the physical components of the
26 property, such as the spring itself and surrounding landscape features) the
27 setting and feeling of Ha’Kamwe’ and its environs and the cultural
28 practices conducted there, both of which will be altered (albeit temporarily)
by the drilling equipment and ground disturbance proposed in close
proximity.

1 ACHP May 31, 2024, letter at 2.

2 62. The Tribe submitted comments as a Cooperating Agency on March 13,
3 2024, and May 24, 2024. As part of the Tribe's March 2024 comments, the Tribe also
4 submitted a hydrology report.

5 63. Though the Final EA correctly documented the above-noted effects on
6 Ha'Kamwe' like noise, vibration, and disruption of cultural practices, it falsely concluded
7 that the Project will not impair the spring's flows. BLM's analysis in the Final EA lacks
8 credible evidence that the source of Ha'Kamwe's water would not be impacted. BLM
9 relies on a single twenty-four-year-old study—which was conducted for the earlier
10 Caithness project and focused on a different outcome, using limited test holes—to
11 conclude that the Project will not impact Ha'Kamwe'. However, that study had a
12 different purpose. It was focused on proving a sufficient volume of groundwater existed
13 to satisfy the demand of a proposed electrical power-generating plant and did not
14 determine the source of groundwater for Ha'Kamwe'.

15 64. Relying on that study, BLM made a factually flawed assumption when
16 concluding that the Project will not disturb Ha'Kamwe's source. It asserted that the Big
17 Sandy aquifer is divided into an upper, a middle, and a lower aquifer and that drilling will
18 take place in the Upper Aquifer while the source of Ha'Kamwe' is in the Lower Aquifer.
19 This terminology was lifted from the abandoned Big Sandy Energy Project and was
20 based on that project's corporate interests in establishing groundwater sources as cooling
21 water for the energy project. However, the aquifer divisions were based on observations
22 from only a few deep wells that do not characterize the aquifer as a whole. Further, BLM
23 admitted that water for Ha'Kamwe' may also come from the Upper Aquifer.

24 65. In contrast, the hydrology report that the Tribe submitted specifically
25 evaluated whether and how the Project would disrupt Ha'Kamwe's flows—and found
26 that disruptions are likely. That report also pointed out several critical issues regarding
27 the spring's hydrology that BLM had not assessed in its own evaluation. BLM ignored
28 that evidence, however, focusing solely on the inadequate energy project study.

1 66. Further, a U.S. Geological Survey report the Tribe submitted to BLM
2 shows that BLM's characterization of the aquifer is wrong. Due to erosional
3 unconformities, the Big Sandy Formation varies widely in thickness, from measured
4 sections ranging from 57 to 245 feet. In addition, the energy project study shows that the
5 aquifer's impermeable layers vary in thickness, undercutting BLM's assumption that the
6 aquifer sits neatly in three distinct and uniform confined units. These variations also
7 indicate that the proposed borehole depths of 360 feet would penetrate thinner confining
8 layers and thus reach pressurized portions of the aquifer, potentially disrupting subsurface
9 flows that feed Ha'Kamwe'. BLM failed to explain how these variations affected its
10 assessment.

11 67. BLM also failed to analyze or consider geologic faults and related impacts
12 on the source for Ha'Kamwe'. Faults and fractures can become conduits for water
13 between aquifers. The drilling proposed in the Project would encounter subsurface faults
14 and fractures, providing a pathway for the transmission of groundwater to or from the
15 Ha'Kamwe' spring. The Final EA does not analyze the potential for exploration
16 boreholes to intersect faults and fractures, which would further impact the source of
17 groundwater for Ha'Kamwe'.

18 68. The Final EA provides that if a water intersection occurs during the drilling
19 process, then the hole will be plugged. However, there is no analysis in the Final EA that
20 demonstrates this measure will be effective in mitigating harmful effects on Ha'Kamwe'.
21 Further, there is no analysis regarding the potential impacts to hydrology by plugging
22 these wet holes.

23 69. The incomplete and inaccurate hydrologic data in the Final EA undermines
24 BLM's finding that the Project will not harm Ha'Kamwe'. Final EA at 3. The only study
25 to directly assess this question determined that harmful effects are likely—a reality BLM
26 ignored.

27

28

FIRST CLAIM FOR RELIEF

Violation of the NHPA: Erroneous Finding of No Historic Properties Affected

70. The Tribe hereby realleges and incorporates by reference the facts and allegations set forth in all preceding paragraphs as if set forth in full herein.

71. The NHPA required BLM to identify the Project’s effects on “any historic property.” 54 U.S.C.A. § 306108. To do so, BLM was required to identify the “[a]rea of potential effects,” meaning “the geographic area or areas within which [the Project] may directly or indirectly cause alterations in the character or use of historic properties.” 36 C.F.R. § 800.16(d).

72. Ha’Kamwe’ is a recognized TCP. A “traditional cultural property” is a historic property “that is eligible for inclusion in the National Register because of its association with cultural practices or beliefs of a living community that (a) are rooted in that community’s history, and (b) are important in maintaining the continuing cultural identity of the community.” National Park Service, U.S. Dep’t of the Interior, *National Register Bulletin 38: Guidelines for Evaluating and Documenting Traditional Cultural Properties*, 1 (1998).

73. Although BLM was aware of Ha’Kamwe’s existence, status as a TCP, and its importance to the Tribe, BLM narrowly defined the area of potential effects to exclude Cholla Ranch and Ha’Kamwe’, concluding that no historic properties will be affected.

74. As the ACHP recognized, however, the Final EA contradicts this finding. The EA expressly states that the Project will cause “visual effects” and “[n]oise and vibration” that may, among other harms, “[d]isrupt[] . . . cultural practices at and/or near *Ha’Kamwe’*.” Final EA at 15. After reviewing the Project’s EA, the ACHP concluded—as did the Tribe—that “there is the clear potential for effects on the Ha’Kamwe’ historic property, including noise, vibration, and disruption to cultural practices conducted by the Tribe.” ACHP’s May 31, 2024 letter. These findings in the EA mean that BLM was obligated to include in the area of potential effects for its NHPA analysis and make a finding of “[h]istoric properties affected” under 36 C.F.R. § 800.4(d)(2).

1 75. For these reasons, BLM's narrow definition of the area of potential effects;
2 subsequent finding of "[n]o historic properties affected"; project approval; and the DR,
3 FONSI, and Final EA violate the NHPA and its implementing regulations and policies
4 and are arbitrary, capricious, not in accordance with law, and without observance of the
5 procedures required by law, within the meaning of the APA, 5 U.S.C. §706. BLM's
6 violation of law prejudices and adversely affects the Tribe's rights and interests.

7 **SECOND CLAIM FOR RELIEF**

8 **Violation of NEPA: Failure to Consider a Reasonable Range of Alternatives**

9 76. The Tribe hereby realleges and incorporates by reference the facts and
10 allegations set forth in all preceding paragraphs as if set forth in full herein.

11 77. NEPA requires federal agencies to rigorously explore and objectively
12 evaluate all reasonable alternatives. Federal agencies must devote substantial treatment to
13 each alternative considered in detail.

14 78. The Final EA unlawfully fails to consider a reasonable range of
15 alternatives. It considers only two alternatives: approving or denying the proposed
16 exploration plan in full. It failed to consider a middle-ground alternative that better
17 protects Tribal and environmental interests. BLM's approach in the Final EA (1) ignores
18 other options for meeting the Project's stated purpose and need and (2) lacks factual
19 support given the Final EA's inadequate and superficial assessment of impacts on Tribal
20 interests.

21 79. Due to the significant concerns that the Tribe has raised throughout this
22 process, BLM should have evaluated an alternative approving only one or two of the
23 three proposed drill sites; an alternative requiring relocation of drill sites farther from
24 Ha'Kamwe', an alternative approving fewer total wells across the three drill sites; an
25 alternative involving less new road construction; and/or an alternative requiring stricter
26 controls on noise, light, and vibrations. Consideration of one or more such alternatives is
27 consistent with BLM's own observation in the Final EA that the "decision to be made"

28

1 was to approve the plan, deny the plan, or approve the plan “subject to changes or
2 conditions necessary to meet” regulatory requirements. Final EA at 2.

3 80. BLM’s issuance of the DR, FONSI, and Final EA and project approval
4 violate NEPA and its implementing regulations and policies and are arbitrary, capricious,
5 not in accordance with law, and without observance of the procedures required by law,
6 within the meaning of the APA, 5 U.S.C. §706. BLM’s violation of law prejudices and
7 adversely affects the Tribe’s rights and interests.

8 **THIRD CLAIM FOR RELIEF**

9 **Violation of NEPA: Failure to Take a Hard Look at Impacts on Water Resources**

10 81. The Tribe hereby realleges and incorporates by reference the facts and
11 allegations set forth in all preceding paragraphs as if set forth in full herein.

12 82. NEPA requires an agency preparing an EA to take a “hard look” at all
13 reasonably foreseeable direct, indirect, and cumulative effects before approving a
14 proposed action. 40 C.F.R. § 1508.1(i). These effects include impacts on natural
15 resources, historic values, and cultural values. 40 C.F.R. § 1508.1(i)(4).

16 83. BLM failed to take a hard look at the direct, indirect, and cumulative
17 impacts of the Project on water resources, including the source for Ha’Kamwe’.

18 84. BLM’s failure to take a hard look at the impacts of the Project on water
19 resources, including the source for Ha’Kamwe’ in the DR, FONSI, and Final EA and
20 project approval violate NEPA and its implementing regulations and policies and are
21 arbitrary, capricious, not in accordance with law, and without observance of the
22 procedures required by law, within the meaning of the APA, 5 U.S.C. §706. BLM’s
23 violation of law prejudices and adversely affects the Tribe’s rights and interests.

24 **REQUEST FOR RELIEF**

25 Therefore, Plaintiff respectfully requests that this Court:

26 A. Declare that BLM violated NEPA in issuing its DR, FONSI, and Final EA
27 and otherwise authorizing the Project;

28

1 B. Declare that BLM violated the NHPA in issuing its DR, FONSI, and Final
2 EA and otherwise authorizing the Project;

3 C. Award the Tribe preliminary and permanent injunctive relief prohibiting
4 implementation of BLM's Project approval; and

5 D. Set aside and vacate BLM's DR, FONSI, and Final EA and authorization of
6 the Project;

7 E. Award the Tribe its reasonable attorneys' fees and costs; and

8 F. Grant such other and further relief as the Court deems just, equitable, and
9 proper.

10 Respectfully submitted this 2nd day of August 2024.

CERTIFICATE OF SERVICE

I hereby certify that a true and correct copy of the **COMPLAINT FOR VACATUR, DECLARATORY, AND INJUNCTIVE RELIEF** was filed with the United States District Court, District of Arizona via the Court's CM/ECF system on this 2nd day of August 2024.

I hereby further certify that a true and correct copy of the foregoing document was served via U.S. certified mail pursuant to F.R.C.P. 4(i) on all named parties of record in this case.
