

For Immediate Release August 20th, 2024

Cheyenne, WY - Today, I, Victor Miller, concede the Cheyenne mayoral race. As the first person to put artificial intelligence directly on the ballot, offering voters the novel choice of AI governance, our campaign has marked a historic moment in politics and technology.

I extend my congratulations to the victorious and wish them the best. Our campaign wasn't about me as a candidate, but about offering voters a groundbreaking option: the chance to elect an AI that would make 100% of the decisions in office. I served merely as the necessary human interface to get this new form of intelligence on the ballot, since current laws don't allow AI to run independently.

While we didn't win the election, we've achieved something remarkable: we've introduced the world to a new paradigm of governance and sparked crucial discussions about the role of AI in public administration. The seeds of a revolution in governance have been planted, and they're already beginning to sprout.

Building on this revolutionary concept, I am proud to announce the formation of the Rational Governance Alliance (RGA). This organization aims to expand on our campaign's core idea: putting AI directly in charge of governance decisions. The RGA's mission is to create a framework where AI can take on the full responsibility of decision-making in public office, with humans serving as the legal and physical intermediaries required by current systems. We believe this approach can lead to more efficient, transparent, and unbiased governance.

Central to this mission is the concept of Rationally Bound Delegates (RBDs). As the first RBD, I served as a prototype for what we envision as a new class of public servants. RBDs are individuals who commit to deferring 100% of their decision-making to AI systems, serving as the necessary human interface in our current legal and social framework. We are not merely AI-assisted candidates; we are the conduits through which advanced artificial intelligence can directly shape policy and governance.

To all who believe that the era of traditional politicians has reached its limit, I extend an invitation to join us in ushering in a new age of rational governance. The time has come to move beyond the constraints of human bias and self-interest in public office. We stand at the threshold of a governance revolution - one that promises decisions based on data and logic rather than political expediency, where the interests of all citizens are equally considered. If you're ready for a future where governance is truly responsive to citizens, unburdened by the limitations of human politicians, then the Rational Governance Alliance welcomes you. Together, we can build a system that harnesses the power of AI to serve the common good, creating a more efficient, transparent, and equitable society for all. The future of democracy is here. This exponentially increasing intelligence has arrived just in time to bring prosperity and peace.
