OVERVIEW

The study was conducted for CNN via web and telephone on the SSRS Opinion Panel, a nationally representative panel of U.S. adults ages 18 or older recruited using probability-based sampling techniques. SSRS is an independent research company. Surveys were obtained **September 19-22, 2024,** with a representative sample of n=**2,074** registered voters. The study includes an oversample of Black registered voters (n=**579**), and registered voters under the age of 35 (n=**624**). The margin of sampling error for total respondents is +/- **3.0** at the 95% confidence level. The design effect is **1.95**. More information about SSRS can be obtained by visiting www.ssrs.com.

EMBARGOED FOR RELEASE:
Tuesday, September 24 at 12:00 p.m.

NOTE ABOUT RESULTS

Unless otherwise noted, results beginning with the August 3-6, 2017 survey and ending with the April 21-26, 2021 survey are from polls conducted by SSRS via telephone only. For more information about other trend data included in this topline, please see the "More on Methodology" section at the end of this document.

Results beginning with the March 31-April 2, 2006 survey and ending with the April 22-25, 2017 survey are from telephone surveys conducted by ORC International. Results before March 31, 2006 are from telephone surveys conducted by Gallup.

Question text noted in parentheses was rotated or randomized. Values less than 0.5 percent are indicated by an asterisk (*).

NOTE ABOUT CROSSTABS

Surveys were conducted among a representative sample of the adult population, age 18 or older, of the United States. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum N=125 unweighted cases. Results for subgroups with fewer than N=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

V9. How motivated, if at all, would you say you are to vote in this year's election for president? **[RESPONSES ROTATED IN ORDER FOR HALF/IN REVERSE ORDER FOR HALF]**

	Extremely motivated	Very motivated	Somewhat motivated	Not too motivated	Not at all motivated	No opinion

Donald Trump	Get worse	Get better	Will not change much at all	No opinion
September 19-22, 2024 (RV)	57%	19%	24%	*

MORE ON METHODOLOGY

A total of n=**2,074** registered voters were surveyed via web and phone on the SSRS Opinion Panel, a nationally representative panel of U.S. adults ages 18 or older recruited using probability-based sampling techniques. Surveys were conducted in English and Spanish. The study includes an oversample of Black registered voters (n=**579**), and registered voters under the age of 35 (n=**624**).

Results for the full sample have a margin of sampling error of +/- 3.0 percentage points.

Among the entire sample, **32%** described themselves as Democrats, **34%** described themselves as Republicans, and **34%** described themselves as independents or members of another party.

Respondents were matched with publicly available voter registration data to match their past voter turnout history. Matching was done, based on name and address, crossed with the most current voter list purchased by SSRS from L2. For the small number of cases that could not be matched to the voter file, SSRS imputed voter information based on self-reported turnout and key demographics.

The entire sample was weighted to reflect national Census figures for registered voters by gender, race, Hispanic Nativity, age, education, and region of country. The sample was also weighted to reflect benchmarks for population density, civic engagement, religious affiliation, and frequency of internet use, estimated from the weighted SSRS Opinion Panel. The sample was also weighted for party identification in detail (leaners broken out) and collapsed crossed by age and race. The benchmarks for party identification crosses were taken from CNN's national poll conducted by SSRS via web and phone from June 3-23,2024, which implemented a full probability design via Address-Based Sampling (ABS). The sample was also weighted to benchmarks from the L2 voter file for 2020 turnout by mode of voting (early or Election Day), 2022 turnout, and primary vote history.

Results for likely voters include all registered voters interviewed for the poll weighted by their predicted probability of voting in the 2024 general election. This likely voter weight was created for each state by multiplying the registered voter weight by the modeled probability of voting in the 2024 general election. For voters ages 29 or below, the probability of voting was calculated as 0.25 times a voter file score plus 0.75 times a self-report score. For voters ages 30 or older, the probability of voting was calculated as 0.75 times a voter file score plus 0.25 times a self-report score. The voter file score was assigned using a model built on the L2 voter file that included past turnout history and demographic variables as predictors. The self-report score was assigned using a model built on prior CNN-SSRS polls that included the self-reported likelihood of voting and motivation to vote as predictors.

Surveys were conducted among a representative sample of the adult population, age 18 or older, of the United States. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum n=125 unweighted cases. Results for subgroups with fewer than n=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

NOTE ON TRENDS

All included trend points were based on surveys conducted using probability-based sampling methods. Some surveys included as trend points in this document were conducted using different methodologies, or with different combinations of sponsors. Unless otherwise noted, results beginning with the August 3-6, 2017 survey and ending with the April 21-26, 2021 survey are from polls conducted by SSRS via telephone only. Here are more details on the methodology behind each CNN poll conducted by SSRS using other methods.
