Maybe I wasn't clear before. As of now, we **do not** have a list of labs that can test private wells.

Dana is checking on that and compiling another list, if so.

Once we have a list I'm happy to post it.

Sarah,

Please craft a sentence or two we can use to introduce the lab testing capability information. Let Linda and I vet it. I'm fine with placing this information on the website. But it needs to be clear the information we're providing.

This could be incorporated into our FAQ as well. But we can work on that tomorrow or Thursday.

The local health depts are getting continuous requests from citizens for labs. Thank for showcasing what we know.

Sarah,

As I mentioned, please ensure that we have language explaining why we're providing the names and contact information for these labs. We also need to verify that all of these labs can be used by the public for private well samples. Let's not do anything until we have that information solid and accurate.

I'm not, but I can. Is that what we want to do?

Dana – thank you for collecting this information. Sharing with everyone today rather than waiting for the conf. call in the morning.

Sarah – know you are probably already loading it on the DEQ GenX website. Thank you!

I have attached a list of labs with contact information. Only TestAmerica-Denver is up and running but the others will be ready in a week or two. They have purchased a standard [CAS # 13252-13-6] and are validating their methods (i.e., MDLs and IDCs) for GenX. I may get additional responses and I can send those to you as I get them. Let me know if you have any questions.

It sounds like this testing will be expensive somewhere in the range of \$600 - \$1000 per sample.

Regards,
Dana
