It has recently come to my attention that there may be asbestos remediation efforts taking place at 999 E Street, as part of the renovations occurring after we vacated the building. Regarding the distressing news about the old building, Ed is reaching out to GSA to contact the building owner to see if we can get any information and clarification on the potential asbestos issue in 999 E Street. Without any knowledge surrounding this issue, I know that it creates concern and anxiety, and the first step we are taking is to understand the details surrounding this situation. Once we receive additional information, I will provide further updates to staff.

Best regards,

Alec Palmer
