As an industry leader and a major producer of fossil fuels, petroleum products and petrochemicals, Imperial Oil has an important stake in the development of public policy on environmental issues. We believe an effective environmental policy framework for Canada will strike the balance between environmental concerns and our nation's economic priorities, which include remaining competitive in the international marketplace.

The challenge for Canadians, we believe, will be to understand both the environmental and economic issues, the associated risks and the costs and benefits of a range of responses.

At Imperial Oil, we are committed to advancing public understanding of key environmental challenges facing Canada, just as we are committed to participating in the development of sound public policy to address them. In this folder, you will find a series of discussion papers that we believe can help further these objectives.
